Welcome Page

WelcomePage

1.1. Overview & Layout:

The Welcome Page is the initial interface for the doctor. It shall feature a professional design to establish trust and ease of access.

1.2. Hero Image:

The page shall include a "Doctor as a Hero" themed high-quality illustration.

1.3. Header/Heading: The top section must contain two primary options

1.3.1.1. Login

1.3.1.2. Register

1.4. Navigation:

Clicking either option shall open the respective form. By default, the Login page shall be active.

1.5. Sub-bar Consistency:

A sub-bar (containing essential links/branding) must remain fixed and visible across all navigation within the welcome screens

Remember me for 30 days checkbox থাকবে।

Forgot Password?

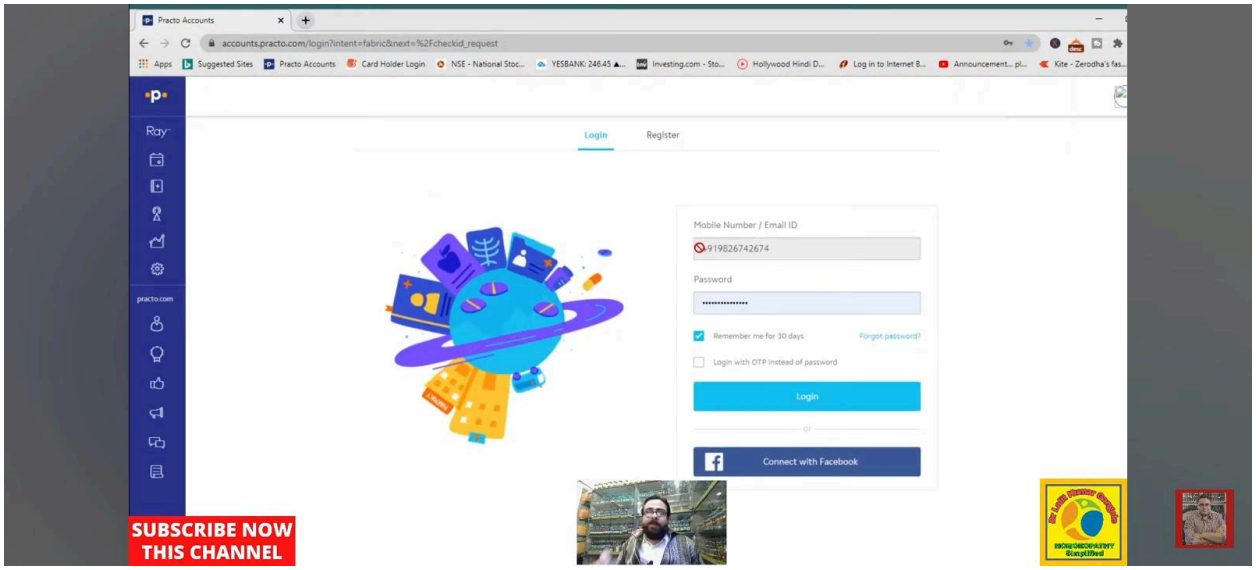

Layout Structure

এই পেইজটি মূলত একটি Split-Screen Layout অনুসরণ করছে।

Main Content Area: মাঝখানের অংশটি দুটি ভাগে বিভক্ত: বাম পাশে একটি রেজিস্ট্রেশন এবং ডান পাশে লগইন কার্ড।

Background: ব্যাকগ্রাউন্ড একদম ক্লিন সাদা যাতে ইউজারের ফোকাস লগইন ফর্মের ওপর থাকে।

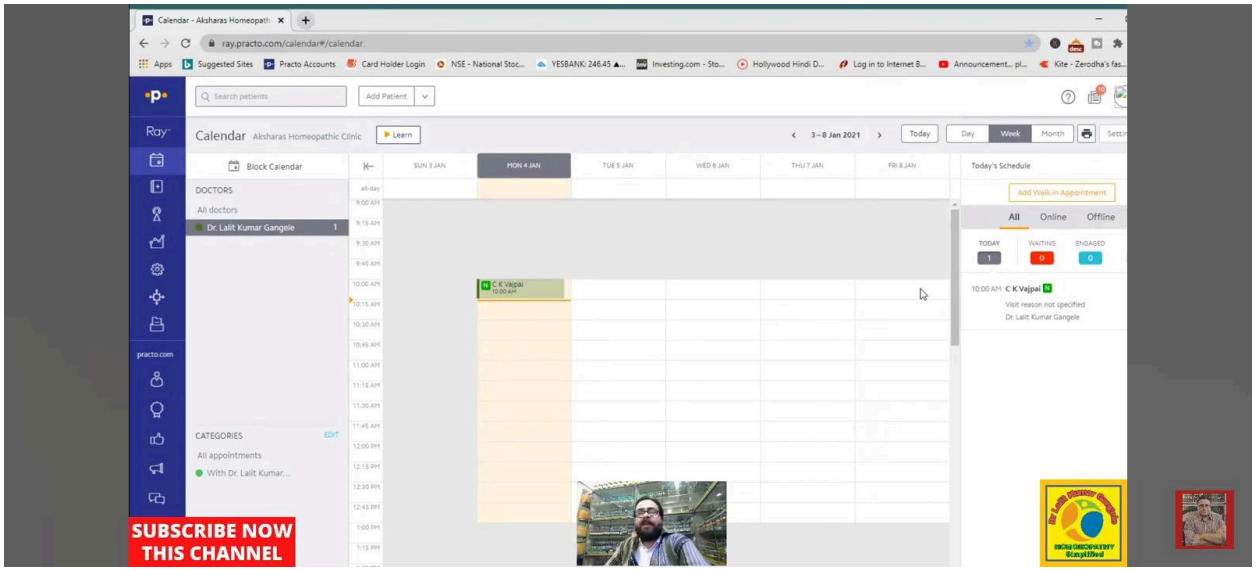

Login Page

1.3.1. Login

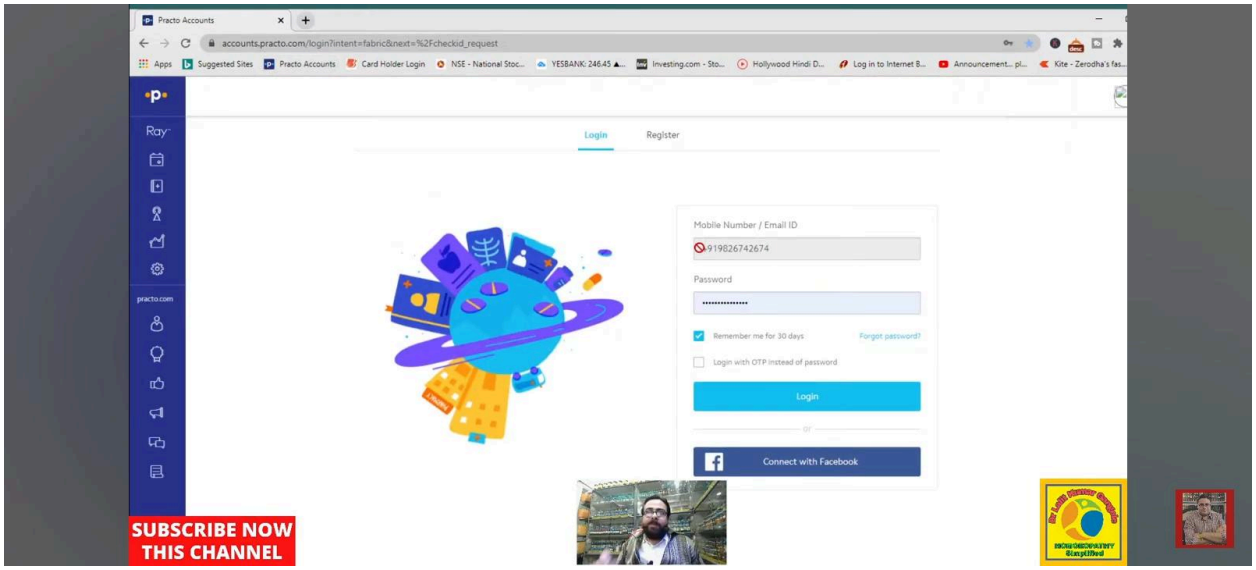

1.3.1.1. Credentials: The user shall authenticate by entering their registered phone number/ Email and password.

1.3.1.2. Multi-Factor Authentication: Upon submission of valid credentials, the system must generate and send a One-Time Password (OTP) to the user's registered phone number.

1.3.1.3. Access Authorization: Following successful OTP verification, the system shall redirect the user to the Home Page.

Registration Page

1.3.2. Register

1.3.2.1. The user (Doctor) must provide the following mandatory details for registration:

a. Phone Number/Email
b. BMDC (Bangladesh Medical & Dental Council) Number
c. Full Name
d. Password

1.3.2.2. After data submission, the system shall require OTP verification to finalize the registration process.

1.3.2.3. Alternative Registration (Email/S

1.3.2.4. ocial)

1.3.2.5. The system shall support alternative registration methods, allowing the Doctor to register via:

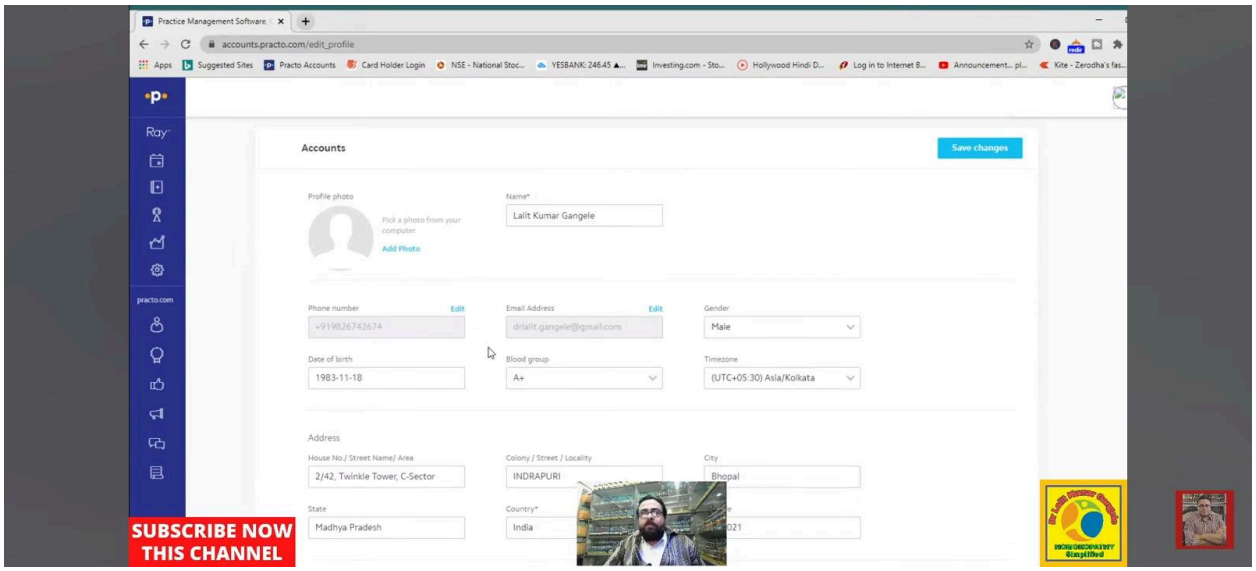

a. Valid Email Address
b. Facebook Account Integration

1.3.2.6. Post-Registration Redirection

1.3.2.7. Account Creation Form

- After successful registration and verification, the user must complete the Account Creation Form. Upon submission of the required details, the system shall redirect the user to the Home Page.

Account Creations

3.2.6. Account Creation

Process Overview

To ensure a high-quality user experience, new doctors shall complete a 4-step onboarding process.

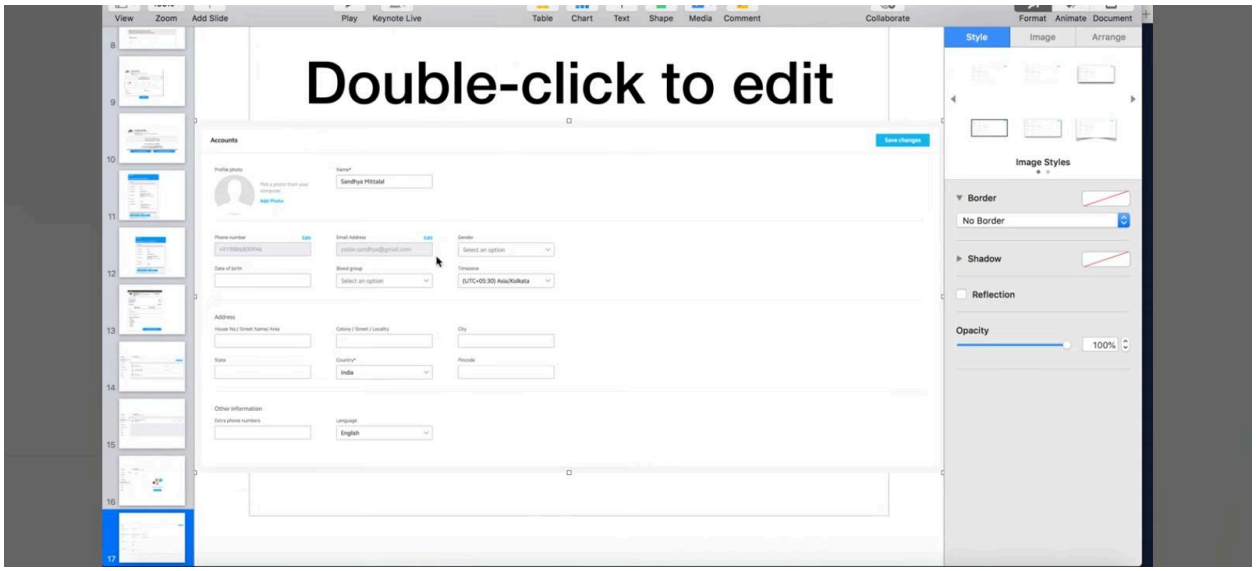

- 3.2.6.1. Personal Details
- 3.2.6.2. Professional Details
- 3.2.6.3. Academic Information
- 3.2.6.4. Identification & Documents
- 3.2.6.5. Final Submission

This flow differentiates between Mandatory information (required for legal and system functionality) and Skippable information (which can be updated later via the Profile settings). After the final step, the "Final Finish" button will redirect the doctor directly to the Home Page

a. Progress Tracking: A visual Stepper/Progress Bar must be displayed at the top of the page to show the doctor's current stage (1 of 4).
b. Validation Gate: The system must not allow the user to proceed to Step 3 until all mandatory fields in Steps 1 and 2 are validated and stored.
c. One-Time Execution: This 4-step wizard is exclusive to the initial registration. Subsequent logins must bypass this flow and go directly to the Home Page.

d. State Persistence: Implement "Auto-save" or "Draft" logic so that if the user accidentally refreshes the browser, the data entered in the current step is not lost

Personal Information

3.2.6.1. Personal Details

The system shall collect basic identification data. Some fields will be pre-populated to ensure a seamless experience.

a. Profile Picture: Optional upload functionality (e.g., Drag & Drop or Browse).
b. Name: Pre-filled from the initial registration data (Editable if necessary).
c. Mobile Number (*): Mandatory numeric input. (Pre-filled if used during registration).
d. Email (*): Mandatory email format validation. (Pre-filled if used during registration).
e. Gender (*): Mandatory selection (Male / Female / Other).
f. Date of Birth: Optional date-picker widget.
g. Nid/ birth registration number
h. Blood Group: Optional
i. drop-down menu (A+, A-, B+, B-, O+, O-, AB+, AB-).
j. Address: Optional fields for City, District, and Street.
k. 2nd Phone: Optional numeric input for emergency or alternative contact.
l. Language: Defaulted to English (User may change via drop-down if other languages are supported).

Navigation & Data Persistence

a. Next Button: Clicking "Next" must validate mandatory fields (Mobile, Email, Gender). Upon successful validation, the system shall save the progress and navigate to the Professional Information section.
b. Previous Button: Allows the user to return to the initial Welcome/Login screen.
c. Progress Saving: The system must ensure that if the user navigates back and forth, the data entered remains in the fields (State Persistence).

Professional Information

3.2.6.2. Professional Information

This step captures the doctor's legal medical standing and academic background. It is divided into Mandatory Credentials and Detailed Qualifications.

3.2.6.2.1 Professional Credentials

The system shall require the following fields to verify professional status:

a. BMDC No. (*): Mandatory numeric/alphanumeric input.
b. Specialization (*): Mandatory field with Auto-Suggestion.
   ***Logic**:* As the user types (e.g., "Card..."), the system must suggest matching specialties (e.g., Cardiology, Cardiovascular Surgery).
c. Years of Experience: Optional numeric input.
d. Workplace: Optional text input (Current hospital or clinic).

Technical Logic Notes for Developers:

a. Auto-Suggestion Engine: The Specialization field should be linked to a predefined library of medical specialties to ensure standardized data entry.
b. Field Validation: If the user attempts to click "Next" without a BMDC No. or Specialization, the system must highlight these fields in red and prevent navigation.
c. Dynamic UI: Use a "repeater" component for the Qualifications section so users can list as many degrees as they possess.

Academic Information

3.2.6.3. Academic Information

The user shall list their qualifications. This section is optional and may be skipped.

3.2.6.3.1. MBBS / FCPS / MD
3.2.6.3.2. Additional Degrees / Awards

3.2.6.3.1. Detailed Qualifications (Optional)

The user can list their academic and professional achievements. This section allows multiple entries (e.g., the doctor can add multiple degrees).
For each degree, the system shall provide the following

a. Degree Name: (e.g., MBBS, MD).
b. Passing Year: (Year of graduation).
c. Institute Name: (College or medical school).
d. Country: (Country of the institution).

3.2.6.3.2. Awards & Recognition:

For each award, the system shall provide similar input fields:

a. Award Title: Name of the award.
b. Year: Year received.
c. Issuing Organization/Institute: Who presented the award.
d. Country: Location of the awarding body.

i. Next Button: Validates the current step and moves the user to the next screen.
ii. Previous Button: Allows the user to go back and review or edit information in the previous step without losing data in the current step.
iii. Skip Option: Specifically for Step 2, Step 3, and Step 4, a "Skip" button allows users to proceed to the dashboard and fill these details later.

Technical Logic:

a. Dynamic Entry: For Degrees and Awards, implement an "Add More" button logic. This allows the doctor to add rows dynamically for each qualification.
b. State Management: Ensure that clicking "Previous" does not clear the data already typed in the fields.
c. Validation: While the qualification section is optional, if a user starts typing a degree, the "Degree Name" and "Institute" must be filled before clicking "Next."
d. Navigation: The system must allow the user to navigate using "Next" or "Previous" buttons.

Document Upload

3.2.6.4. Identification & Documents

To complete the verification process, the system shall require the user to provide high-quality images of the following:

3.2.6.4.1. NID (National ID): A clear image of the front and back of the user's National Identification Card.

3.2.6.4.2. Medical Certificates: Professional certificates (e.g., MBBS, FCPS, or MD) to verify the qualifications mentioned in Step 2.

3.2.6.4.3. Digital Signature: Upload or update the signature used on digital prescriptions.

Capture & Upload Methods

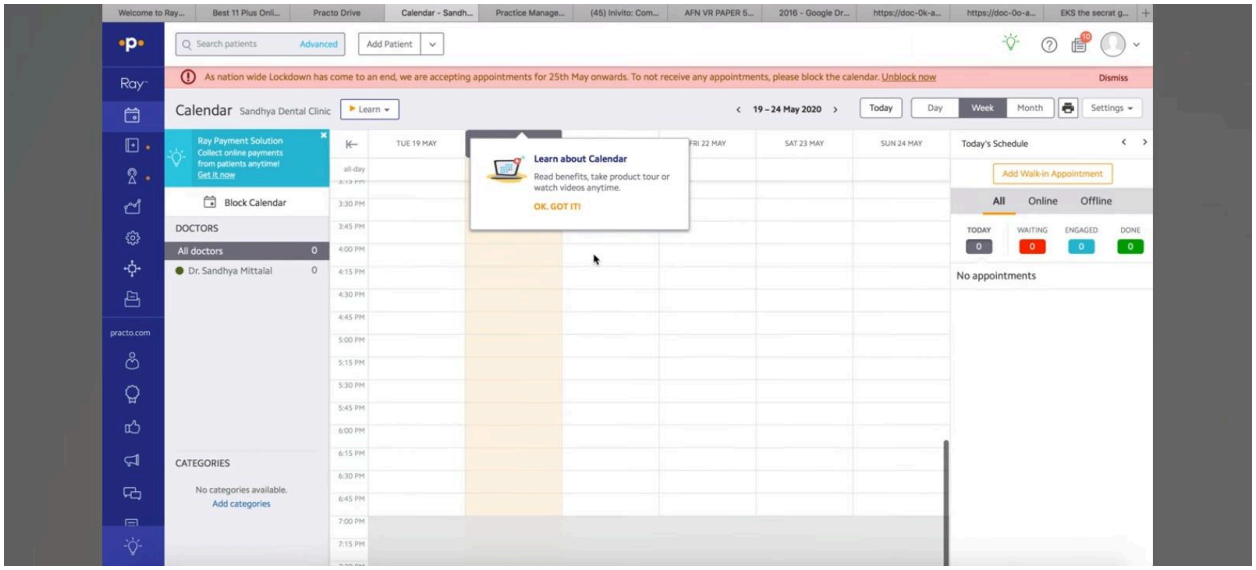

The system must provide two ways for the user to submit these documents:

a. Upload from Gallery: The user shall be able to select pre-saved image files (JPEG, PNG, or PDF) from their device storage.
b. Live Photo Capture: The application shall integrate with the device’s camera, allowing the user to take a live photo of the document.

Final Submission

3.2.6.5.
Upon clicking the "Save" or "Finish" button on the final step, the system shall validate all mandatory data and redirect the user to the Homepage.

Home Page/ Dashboard

2. Dashboard Layout & Default View

Overview

Upon successful login or redirection from the onboarding wizard, the system shall display the Calendar as the default landing view. The Dashboard is divided into four (4) distinct sections to ensure a high-density, organized workspace.

2.1. Section 1: Header Components(Top)

The Header serves as the global control bar for the application.

1. Universal Search: Search patients by Name, ID, or Mobile.
2. Add New Patient Button: Quick access to the intake module.
3. Notifications: Real-time alerts for appointments and system messages.
4. Doctor Profile: Displays name and picture with access to account settings.
5. Help/Support: Access to FAQs and technical guidance.

2.2 Section 2: Sidebar components(Left Side)

The Sidebar acts as the primary navigation menu for switching between modules.

Navigation Items

1. Patient
2. Calendar
3. Settings
4. Communication
5. Patient Management
6. Integration
7. Statistics

Practo Integration

8. Profile Management
9. Community
10. Prime Services
11. Feedback Management.

12. Logout

Functionality: Collapsible design to save space, with active state highlighting.

2.3 Section 3: Calendar (Middle - Main View)

The central workspace focused on appointment management and high-density scheduling.

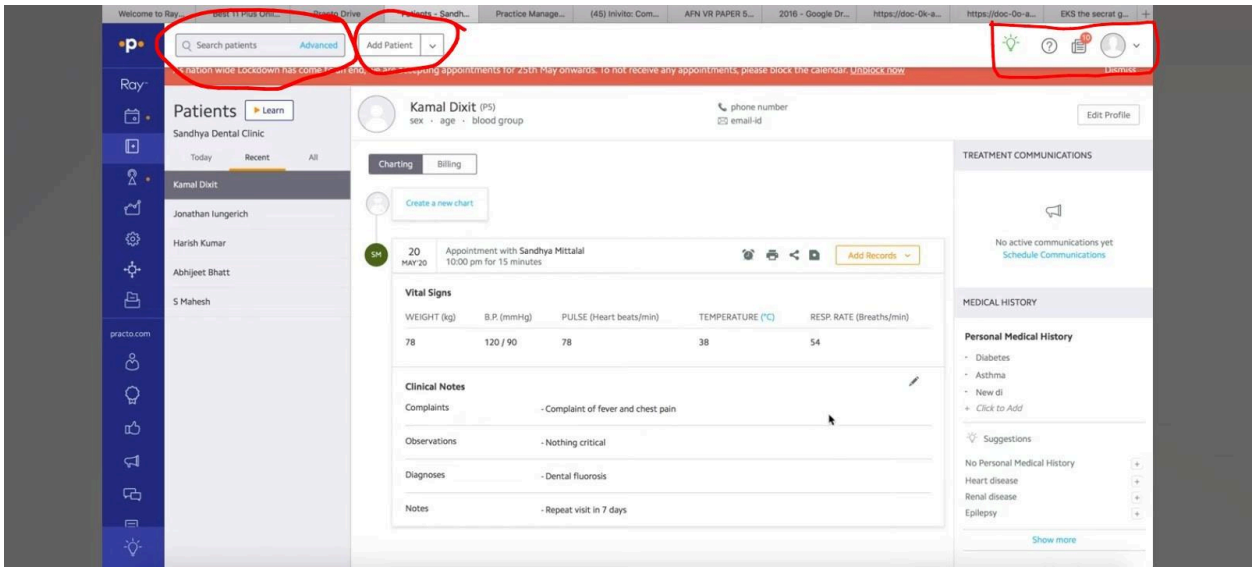

Structure:

- X-Axis (Columns): Specific Dates (e.g., Monday 15th, Tuesday 16th).
- Y-Axis (Rows): Time Slots in 15/20 minute intervals (e.g., 09:00 AM, 09:15 AM).

Interactions:

- Empty Slot: Clicking an empty slot triggers the Add New Patient module.
- Appointment Cards: Existing appointments appear as cards showing Patient Name and Status (New/Old/Follow-up).
- Drag & Drop: Doctors can move cards to reschedule, triggering a confirmation prompt.
- Controls: Toggles for Day/Week/Month views, a "Today" button, and a Date Picker to navigate specific dates.
- Infinite Vertical Scrolling
  To ensure a seamless user experience, the middle section (Calendar) shall support infinite vertical scrolling for time slots.
- Continuous Flow:
  The user shall be able to scroll downwards indefinitely within the calendar view. As the user reaches the end of the currently visible time range (e.g., late evening), the system must dynamically load and display subsequent time slots or the start of the next day's schedule.

Header Components

2.1.1.Universal Search Functionality

- The Header shall feature a centralized Search Bar with multi-parameter recognition.
- Search Criteria: The system must allow the doctor to find existing patients by typing:
    - Patient Name
    - Patient ID (Cura ID)
    - Registered Mobile Number
    - Emai
- Live Results: As the user types, a dropdown shall display matching patient profiles for quick access to their medical records.

2.Patient Intake Action

- "Add New Patient" Button: A prominent, high-visibility button shall be placed in the Header.
- Functionality: Clicking this button triggers the Patient Intake Action (6.3.3) pop-up or redirect, allowing the doctor to register a patient instantly without leaving their current task.

3. Notification Center

- Alert System: A Bell icon/Notification bar must be present to show real-time updates.
- Content: This shall display alerts for:
    1. Upcoming appointments.
    2. Patient arrivals (for Walk-ins).
    3. System updates or professional messages.
- Indicator: A red dot/badge shall show the count of unread notifications.

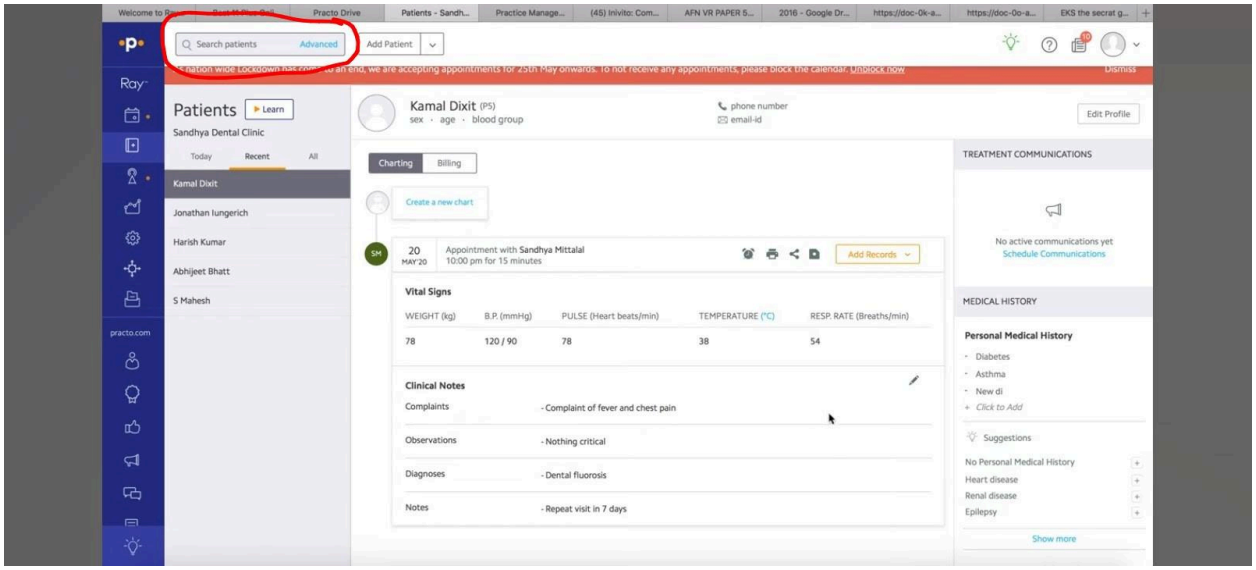

4. Doctor Profile Identification

- Visual Elements: The Header shall display the Doctor's Profile Name and their Profile Picture (uploaded during Step 4 of registration).
- Account Access: Clicking the profile area shall open a dropdown menu providing access to:
    1. Account Settings.
    2. Profile Management (Edit Qualifications, Chamber details).
    3. Logout.

5. Support & Guidance

- Help Option: A "?" or "Help" icon must be integrated.
- Functionality: This redirects the doctor to:
    1. Technical Support (Live chat or Ticket).
    2. Frequently Asked Questions (FAQs).
    3. System Documentation/User Guide.

Universal Search

Universal Search Functionality

Search Bar Interface & Visual Bias

The Header shall house a prominent Search Bar that remains persistent across all modules.

Placeholder Guidance:

To subtly encourage the doctor to use the most accurate search method, the bar shall feature light-grey placeholder text: "Search by Phone Number, Name, or ID..."

Multi-Parameter Recognition (Search Criteria)

The search engine must be intelligent enough to identify the user's intent based on the input type:

A. Registered Mobile Number: Searching via the 11-digit mobile number.
   - Behavior:
     By placing "Phone Number" at the start of the string, the system creates a cognitive bias toward the 11-digit mobile search, which yields the most precise results.
   - Shared Mobile Number Logic: If multiple patients are registered under one phone number (e.g., family members), the system shall list all associated profiles in the dropdown.
   - Profile Preview & Verification: Each result must show the Patient's Name, ID, and Age/Gender. The doctor shall verify the patient's name before selecting the specific profile to ensure accuracy.

B. Patient Name: Partial or full name matching (e.g., "Rahman").

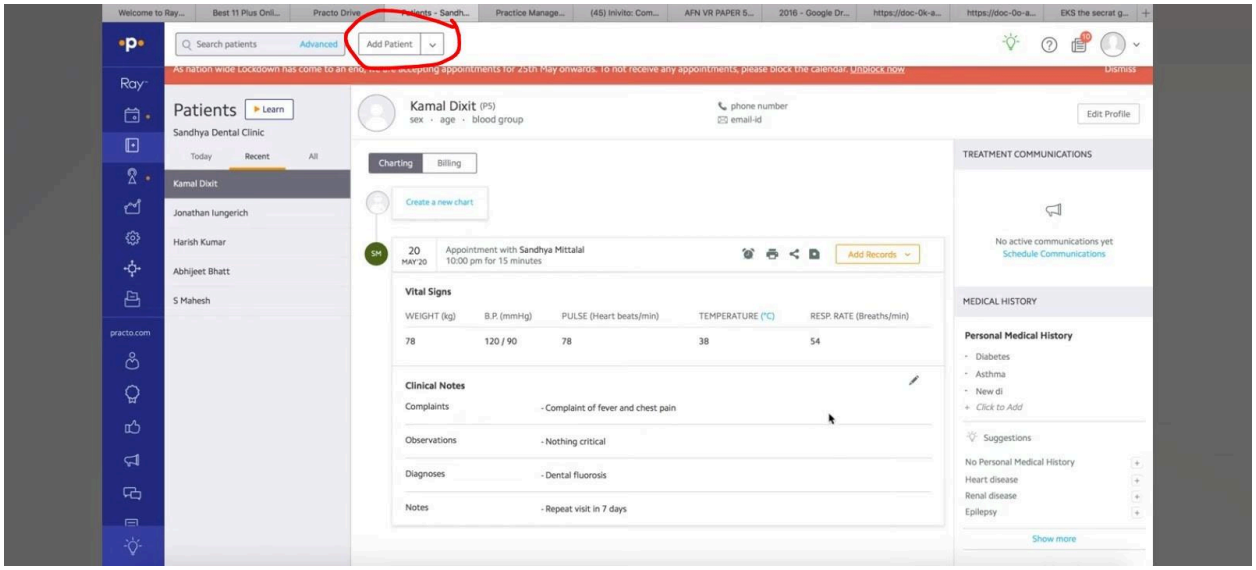

C. Patient ID (Cura ID): Unique alphanumeric identifier search (e.g., "CURA-10293").

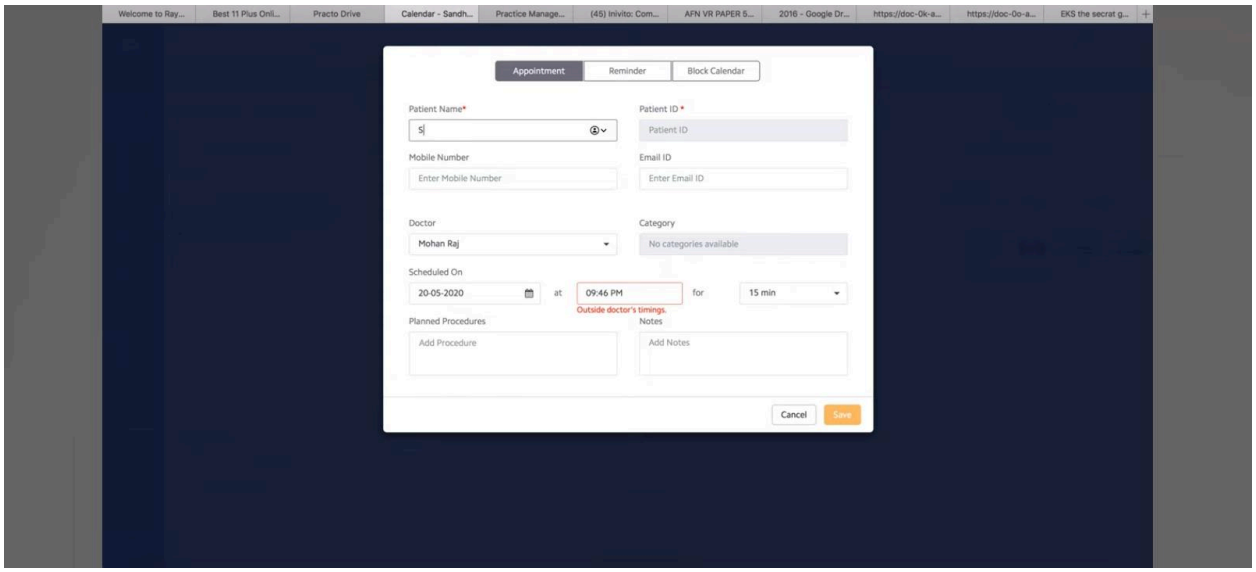

Live Results & Duplicate Handling

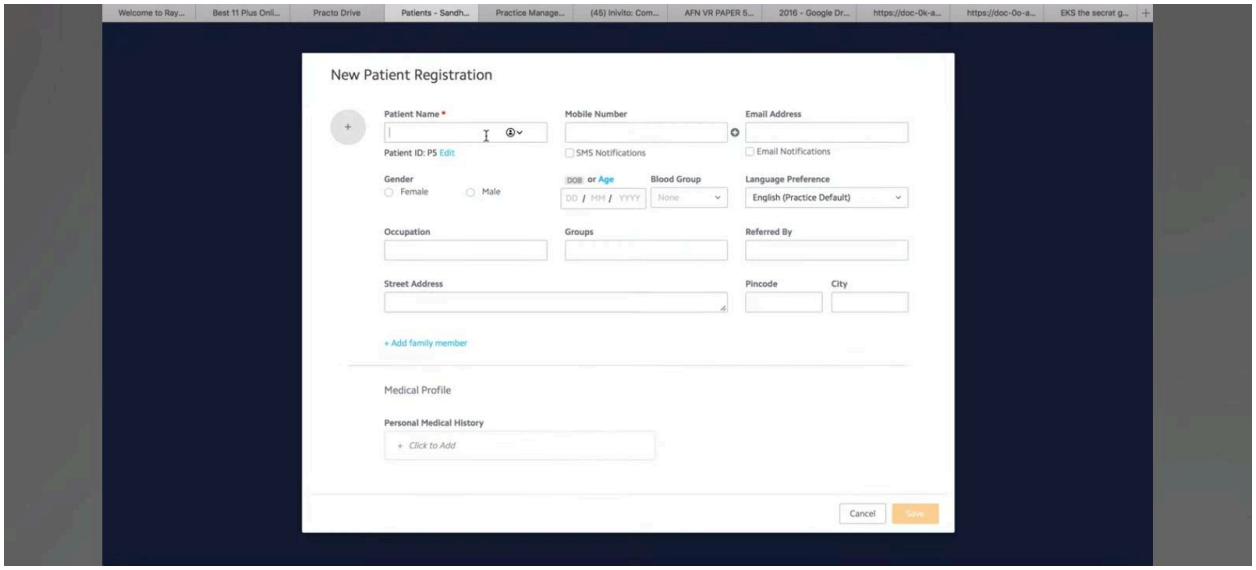

To speed up the workflow, the search must be dynamic:

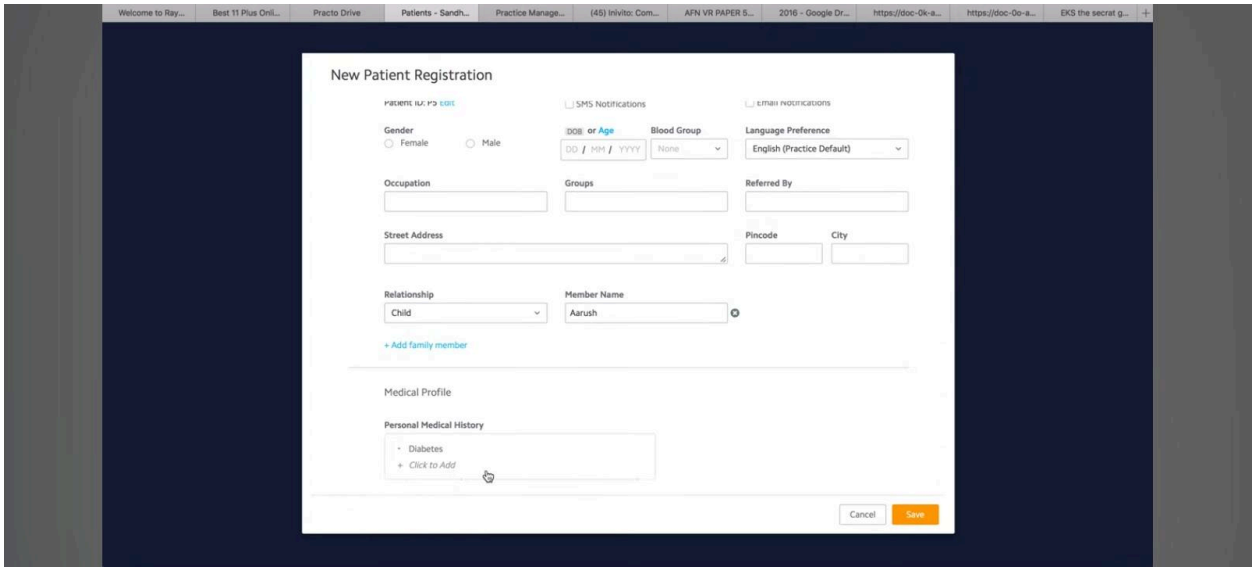

As-You-Type Dropdown: The system shall initiate a search after the third character, displaying a real-time list.
Direct Navigation: Selecting a profile shall take the doctor directly to that specific Patient’s Medical Record/Profile(Time line).

Patient Intake Action

This defines the Patient Intake Action, which is the primary gateway for adding new individuals to the practice database. The goal of this feature is to minimize administrative friction for the doctor or assistant.

- Entry Point: The "Add New Patient" Button
- Placement:
  The button shall be positioned in the Header, typically to the right of the Universal Search bar, for instant accessibility.
- Visual Design: It must be a high-visibility "Call to Action" (CTA) button
- Trigger: Clicking this button shall open a Modal (Pop-up)(Patient add from) overlay.

Rationale:

Using a modal instead of a full-page redirect allows the doctor to register a patient without losing their place on the Calendar or currently active medical record.

The Intake Form

The system shall present a streamlined registration form containing the following essential fields:

Mobile Number (*): Mandatory. The system must immediately check if this number is already in the database to prevent duplicate parent accounts.

- Full Name (*): Mandatory.
- Gender : (Male/Female/Other).
- Age/Date of Birth
- Appointment Type: Dropdown (New Visit / Follow-up / Report Show).
- Blood Group: Optional.
- Scheduling Time (*): * Field: A Date & Time picker.
  Logic: For standard registrations, this allows the assistant to pick a future slot. (Note: For Walk-ins, this defaults to Current Time).
- Note/Remarks:
  A text area for brief notes (e.g., "Patient has high fever," "Coming from out of town," or "Requested a specific assistant doctor").
  These notes will appear on the Appointment Card and the Patient Dashboard.

Real-time Identification

As soon as the Assistant or Doctor begins typing in the Mobile Number, Cura ID, or Full Name fields, the system performs a background search.

If a match is found, a suggestion list appears. Selecting a profile will trigger the Auto-fill sequence.

Automated Data Mapping

Once a profile is selected, all core demographic data (Name, Gender, Age, Blood Group) is instantly populated into the form.

The Scheduling Time and Note fields remain blank, ready for the current visit's specific details.

Full Edit Capacity (The Override)

Total Control: Even after data is auto-filled, every field remains editable. If a patient has changed their phone number or needs to correct their age/title, the Doctor or Assistant can simply type over the existing data.

Action Outcomes

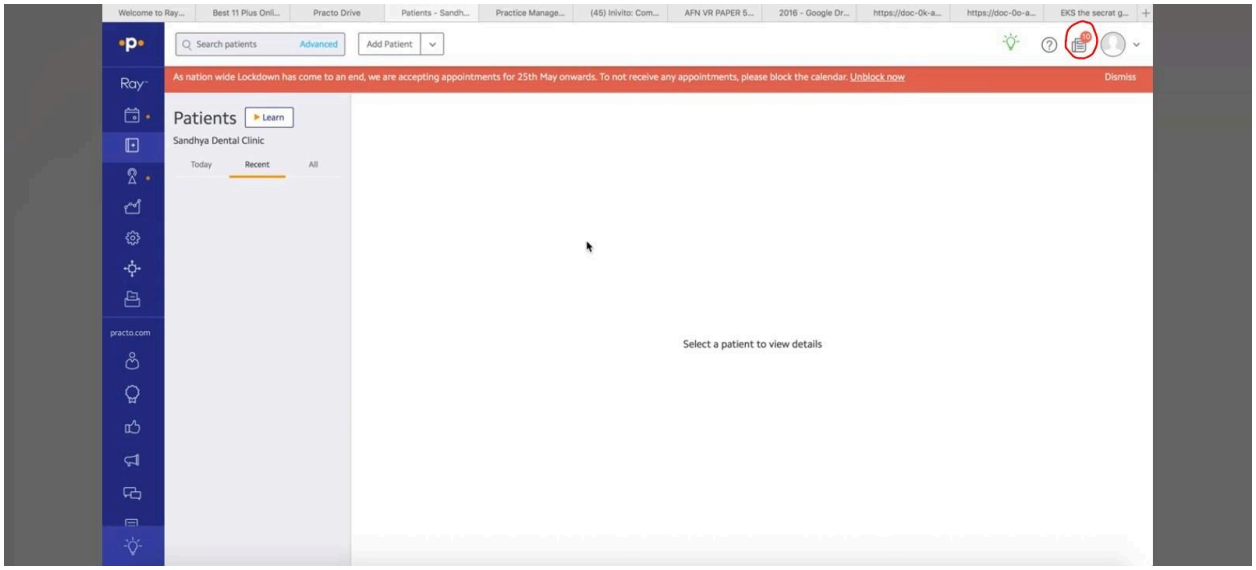

Upon clicking "**Save**," the system shall trigger two (2) distinct automated SMS messages to the patient's registered mobile number:

I. Account Opening Welcome SMS: A congratulatory message confirming their registration with the practice (e.g., *"Congratulations [Patient Name]! Your health account has been successfully created at [Clinic Name]. Your Cura ID is [ID]."*).

II. Appointment Confirmation SMS: A message providing details of the current booking (e.g., *"Appointment Confirmed! You are scheduled to see [Doctor Name] today. Your serial/token number is [No]. Thank you for choosing us."*).

Instant Queueing: The patient is automatically added to the "Waiting" list in the Status Summary (Section 4) and a slot is created in the Calendar (Section 3) for the current time.
Auto-ID Generation: The system shall generate a unique Cura ID for the patient.
Confirmation: A brief success toast appears, and the modal closes, returning the doctor to their previous screen.

Notifications center

Notification Center

Interface & Visual Elements

The Notification Center shall be located in the Header, positioned near the Profile and Help options.

Bell Icon: A clear and visible Bell icon shall be present.

Red Dot/Badge: Whenever a new or unread notification arrives, a small Red Dot or a Numerical Badge shall be displayed over the Bell icon. This indicates the count of unread notifications to the doctor.

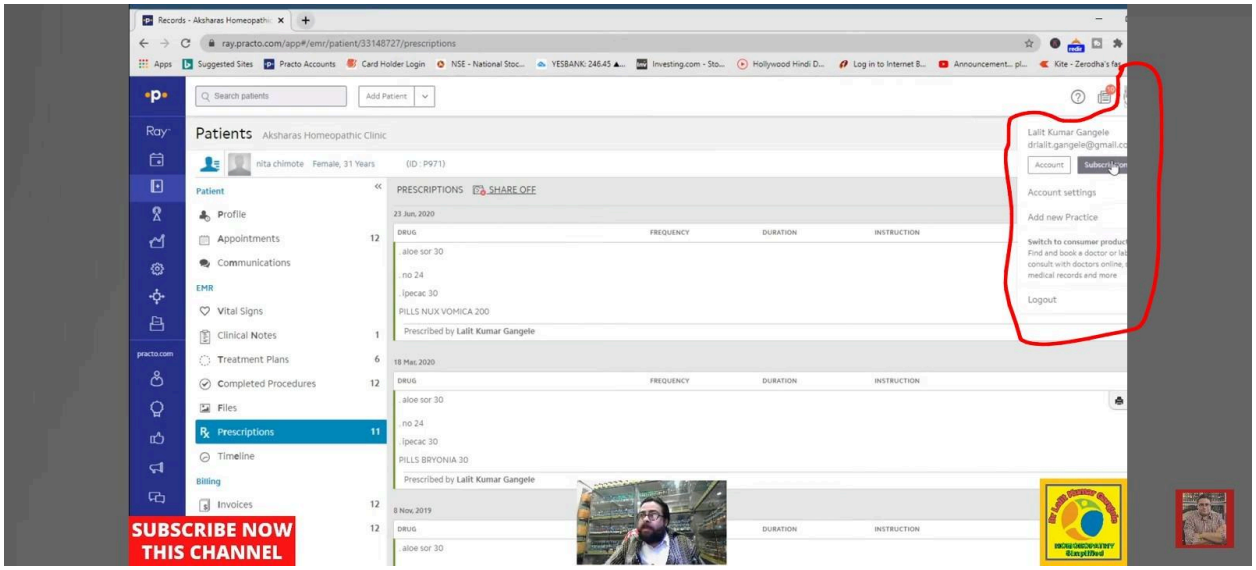

Real-time Alerts (Content Logic)

The system shall generate automated alerts for the following events:

- New Appointments: Whenever a new appointment is booked (Assistant's portal), a notification shall be sent instantly to the doctor.
- Assistant Rescheduling: If an assistant or receptionist moves an existing appointment card to a different time slot or date, the doctor must receive an alert specifying the patient's name and the new time.
- Patient Arrivals (Checked-in): An instant alert triggered the moment a patient is marked as "Arrived" or "Checked-in" at the reception desk.
- Assistant Login Security (OTP Alert)
  When an assistant attempts to log in from a new device, a new browser session, or after a password reset, the system shall not grant immediate access.
  I. OTP Generation: The system shall generate a unique 4 or 6-digit Verification Code (OTP).
  II. Supervised Delivery: This OTP shall be sent directly to the Doctor’s (Admin) Notification Center instead of the assistant’s device.
- System Updates: Messages regarding new software features or scheduled maintenance.

- Professional Messages: Communication from system administrators or other professional updates.
- Default State: All notification sounds shall be set to Mute by default upon system installation or first login. User can unmute default settings.

Doctor Profile Identification

Doctor Profile Identification

Visual Components

- Profile Picture: A circular thumbnail of the doctor's professional headshot.
- Doctor's Name: Full name and title (e.g., Dr. Ariful Islam).
- Status Indicator: A small colored dot on the profile picture.

Interactive Profile Dropdown

Clicking the profile area shall trigger a vertical dropdown menu. This menu now includes high-priority Switch Buttons for instant status and environment control:

Quick-Toggle Switches (Top of Dropdown)

These high-priority toggle switches allow the doctor to control the workspace and team permissions in real-time:

I. Availability Status: (Active / Inactive) Signals the front desk of the doctor's current availability.
II. Notification Sound: (Sound On / Off) Instantly mutes/unmutes all system pings.
III. Assistant Staff Access: (On / Off)
IV. Assistant Doctor Access: (On / Off)

Logic: When switched OFF, all Assistant/Receptionist/Assistant Doctors are immediately restricted.

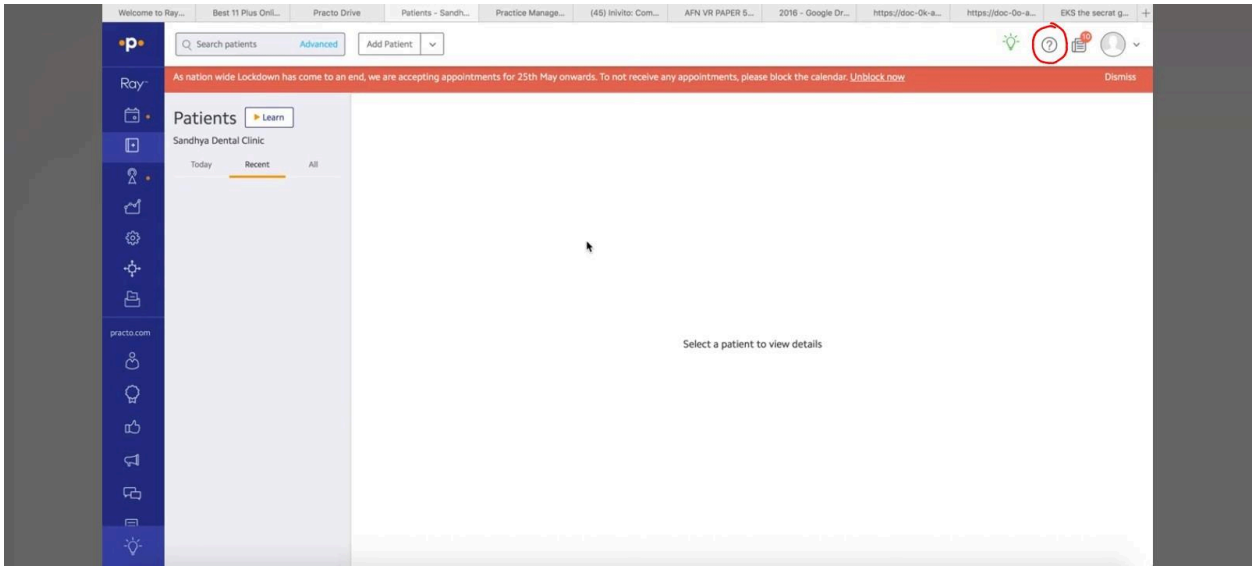

Impact: Active sessions are terminated (forced logout), and no new logins are permitted until switched back ON.

Standard Menu Options

- Block Calendar (Quick Action): Instantly block time slots for emergencies or leave.
- Account Settings: Change password,
- Profile Management:
  Edit Qualifications: Update degrees and specialties.
  Chamber Details: Edit clinic address, fees, and standard hours.

- Digital Signature: Manage prescription signatures.
- Add/Edit Staff
- Logout: Terminates the session with a confirmation prompt.

Support & Guidance

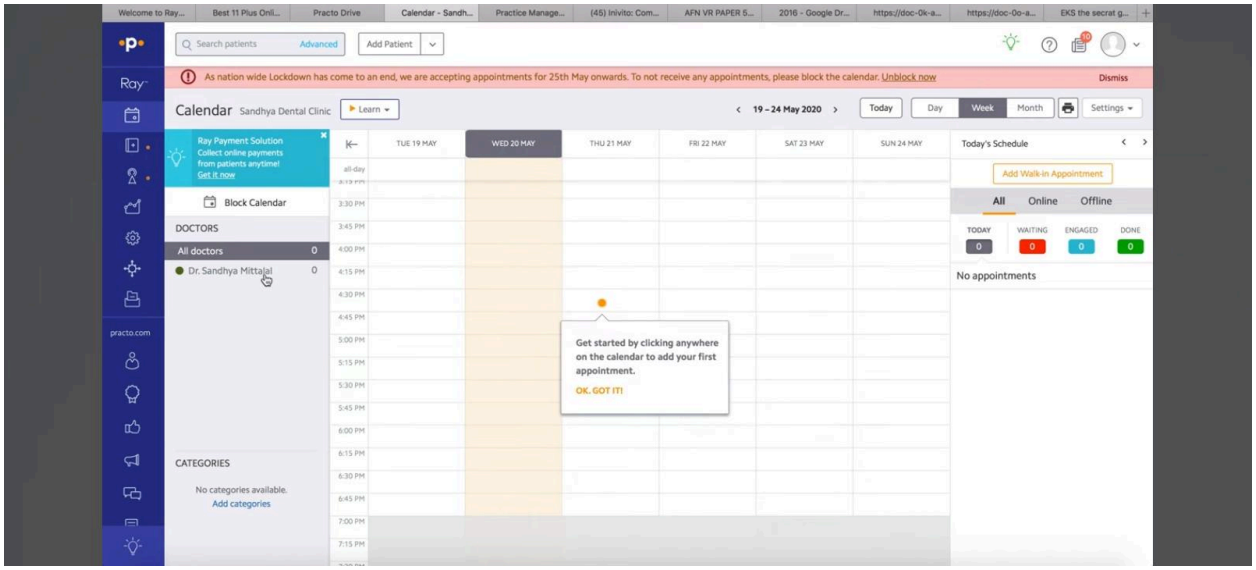

Support & Guidance

To ensure the doctor gets the right level of support at the right time, the Help Desk shall offer:

1. Urgent Support (Immediate Intervention)
    - Function: Used for critical system failures (e.g., "Cannot save prescriptions," "Database not loading").
    - Logic: Clicking "Urgent" triggers a high-priority alert on the Admin's dashboard.
    - Mechanism: It provides an instant Emergency Call button or a direct Hotline number that bypasses standard queues.
2. Live Chat (Real-time Assistance)
    - Function: For general "how-to" questions or non-critical technical issues while the doctor is working.
    - Mechanism: Opens an instant messaging window within the dashboard.
    - Logic: The chat connects to a live Admin or Support representative. It supports File/Screenshot sharing so the doctor can show exactly what they are seeing.
3. Schedule Support Time (Planned Guidance)
    - Function: For in-depth training, system walkthroughs, or discussing feature requests/customizations.
    - Mechanism: Opens a mini-calendar where the doctor can book a 10–15 minute Zoom/Google Meet or a Phone Call with the Admin at a later time.
    - Logic: Once scheduled, the system sends an automated confirmation notification to both the Doctor and the Admin, adding it to their respective calendars.

Middle (Calendar)

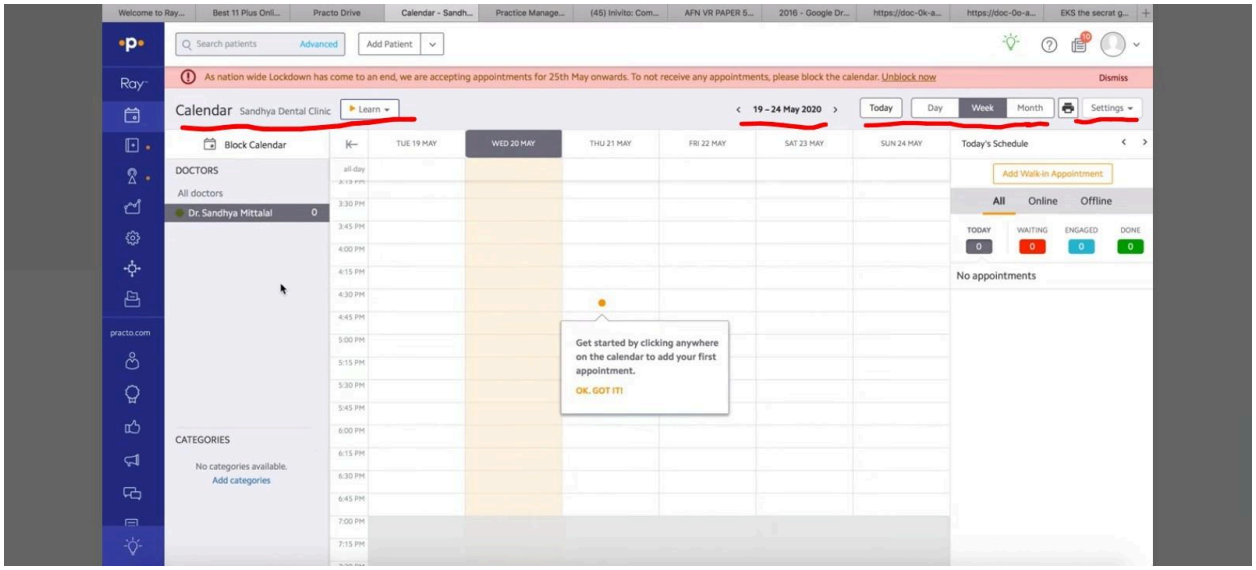

Calendar

The dashboard follows a four-pane architecture to minimize navigation clicks:

- Header Part: Pinned to the top; displays the Doctor's Name, clinic affiliation (Left) and the Active Date (Right).
- Left Part: Contains mini-navigation and primary calendar controls.
- Middle Part: The main canvas for the Schedule Grid or Patient List.
- Right Part: A contextual pane for Appointment Details and quick actions (Check-in, Reschedule, etc.).

Calendar Header

Header Functionality

The header acts as the primary time-navigation tool:

Navigation Arrows: [<](Oct 12, 2026) [>] buttons to move the calendar view sequentially to the previous or next day/week/month.

Date Selection: Clicking the displayed date(Oct 12, 2026) launches a Date-Picker Modal for jumping to a specific future or past date instantly.

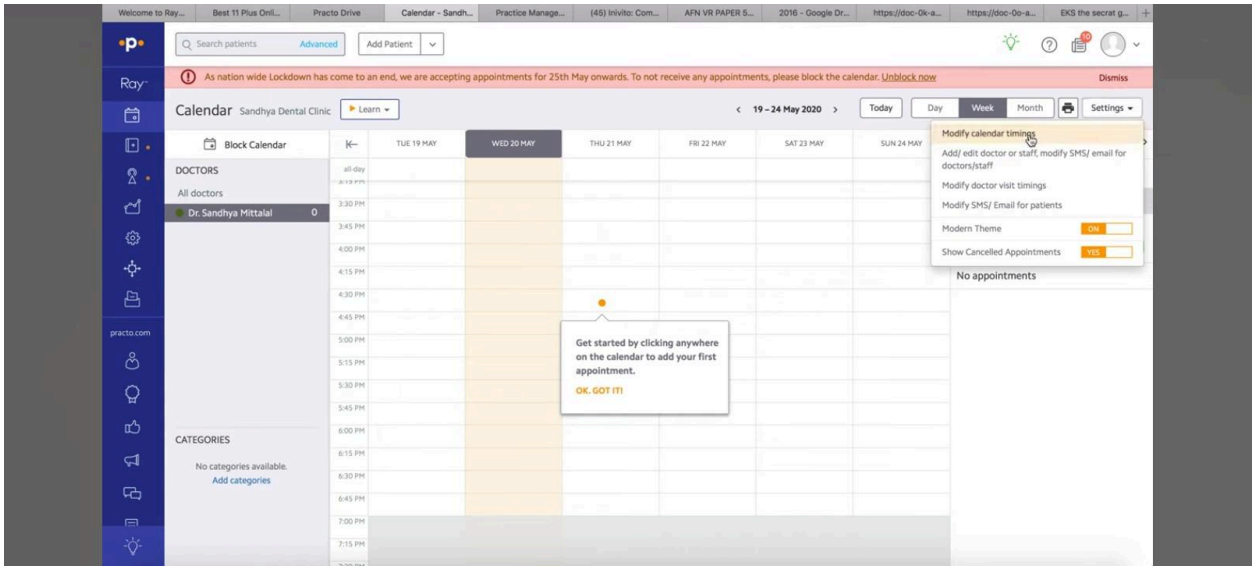

Today Button: A "Home" feature for the calendar; clicking "Today" resets the view to the current system date.

View Options & Patient Lists

- Dynamic View Toggles: The doctor can switch between Day, Week, and Month views.
- Patient List Integration:
  Selecting a date in the Month/Week view triggers a detailed list in the Middle Part.
- Chronological Sorting: Patients are listed according to their assigned time slots (e.g., 09:00 AM, 09:10 AM).

Settings

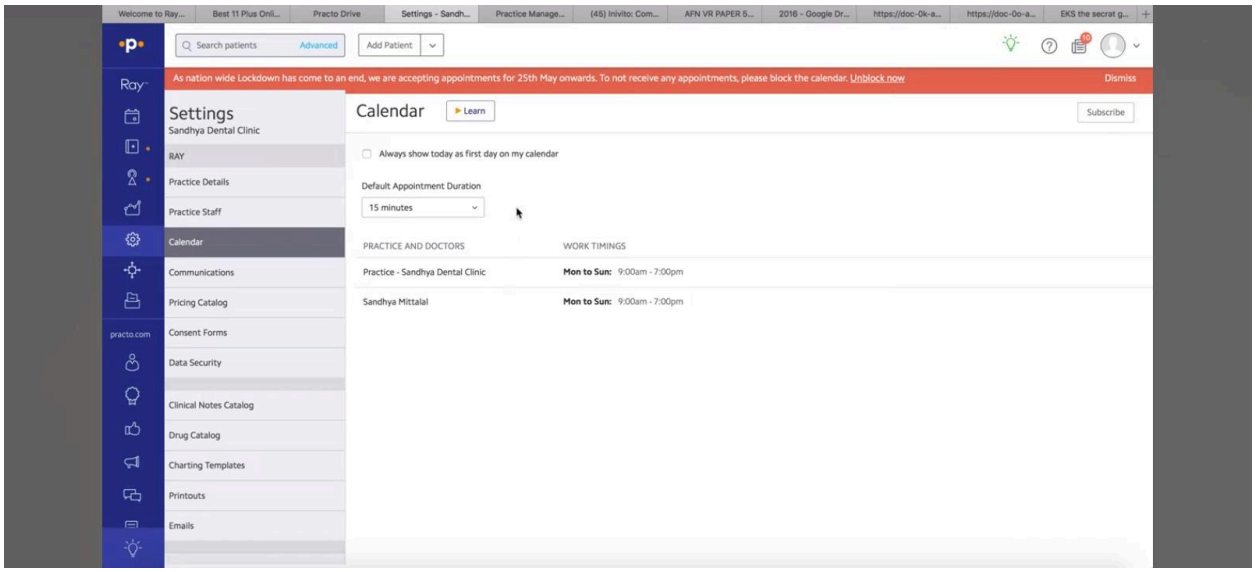

Calendar Quick Settings (Modifications)

The "Settings" icon serves as the control hub for immediate operational changes.

Functional Controls

Modify Calendar Timing (Rescheduling):

Allows the doctor to override the standard session hours for the active date. Example: Closing at 4:00 PM instead of 6:00 PM for a specific personal emergency.

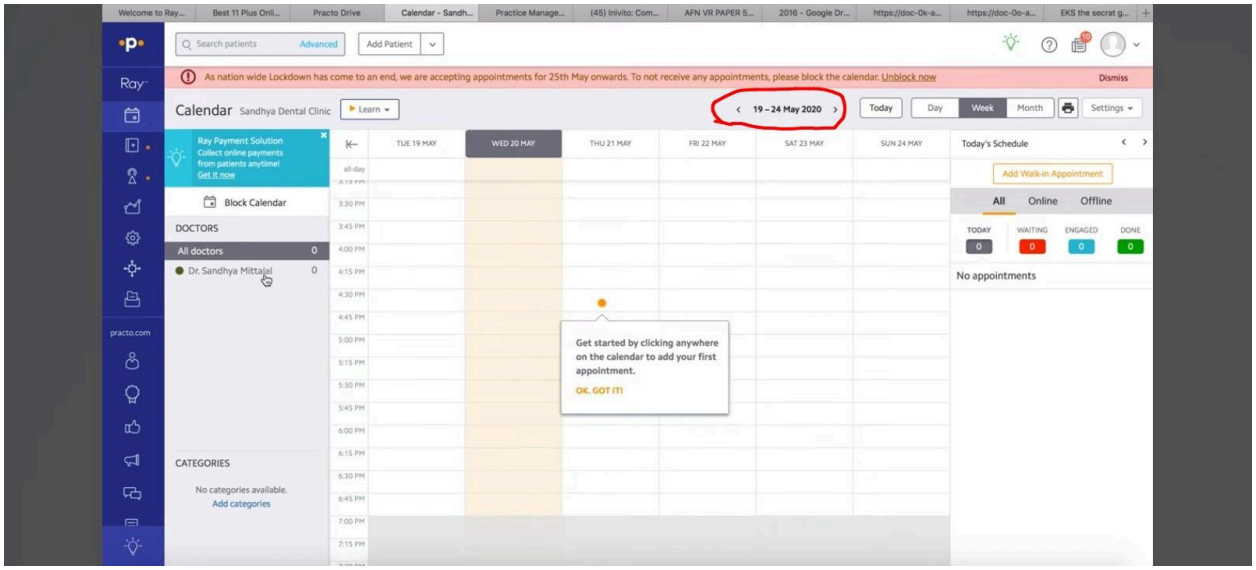

Modify Doctor Visit Time: Adjusts the slot duration specifically for the selected date. Example: Increasing time to 20 minutes during a particularly complex surgery day.

Modify SMS/Email Alerts: A master toggle to pause or resume automated notifications (confirmations/reminders) for the current day's roster.

Show Cancelled Appointments: A visibility filter. When toggled ON, cancelled slots appear (e.g., with a strikethrough) so they can be identified as vacant for emergency walk-ins.

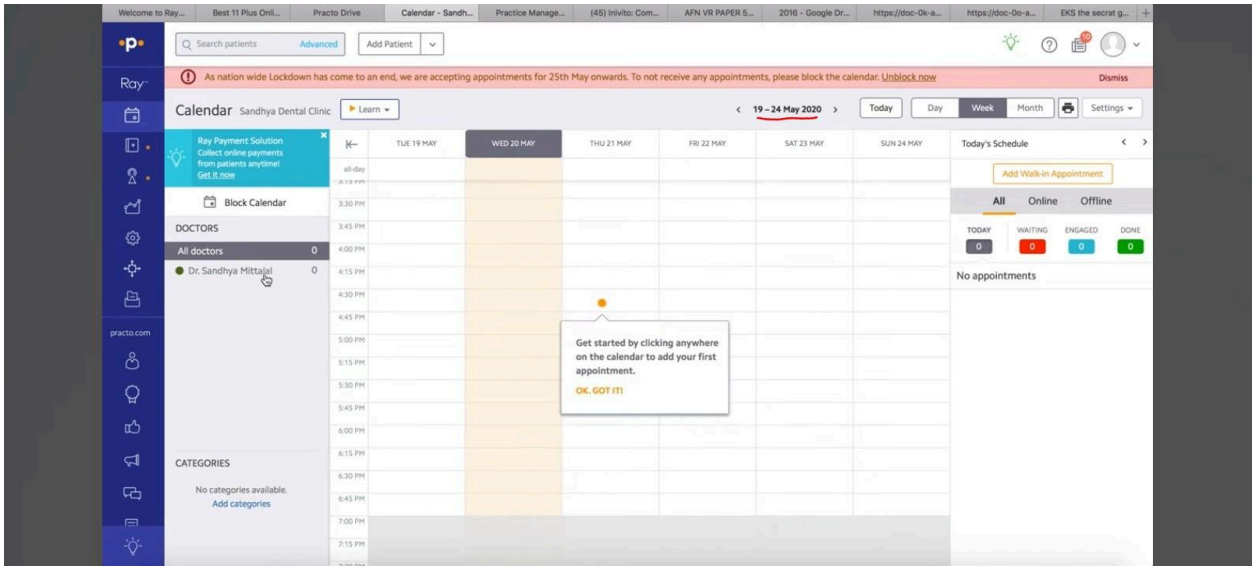

- The Header Part must remain fixed to ensure navigation arrows and date-picker remain accessible while the user scrolls through a long list of 30+ patients in the Middle Part.

Navigation arrow

The Header Part must remain fixed to ensure navigation arrows and date-picker remain accessible while the user scrolls through a long list of 30+ patients in the Middle Part.

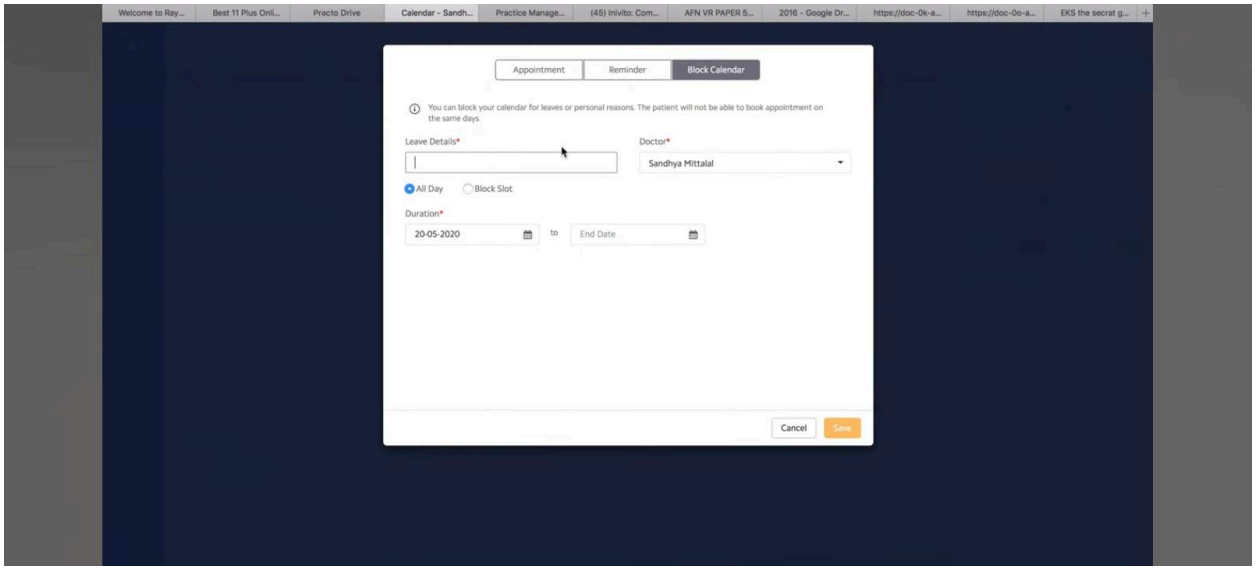

Calendar Left Part

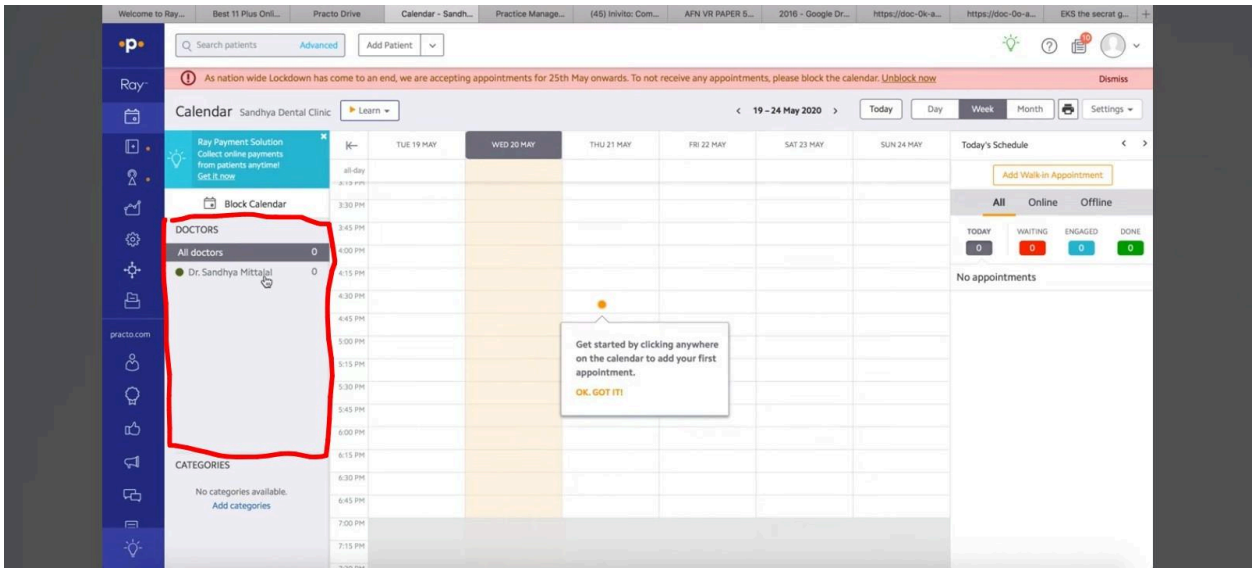

Calendar Left Part: Navigation & Team Directory

The Left Part shall be divided into two primary vertical segments to provide the doctor with both a date-jump tool and quick access to staff information.

1. Upper Segment (Block Calendar): The Block Calendar (Mini-Navigator)
The top half of the Left Box features a compact, interactive "Block Calendar":
Functional Purpose: This serves as a quick date-picker. Clicking any date here instantly updates the Middle Part (Main Grid) to show the schedule for that day.
Visual Cues: * The Current Date is always highlighted.
Dates with Heavy Bookings (High density) can be marked with a small dot or color indicator to show clinic load at a glance.
Navigation: Month-to-month arrows to browse future or past dates without affecting the Main Grid until a specific date is selected.

2. Lower Segment: Team Information & Directory
The bottom half is dedicated to the personnel associated with the current clinic or shift. This allows the doctor to know exactly who is on duty.
Doctor Name: The Lead/Primary Consultant's name and specialization.
Assistant Doctor(s): Names of junior doctors or associates assisting with the session.

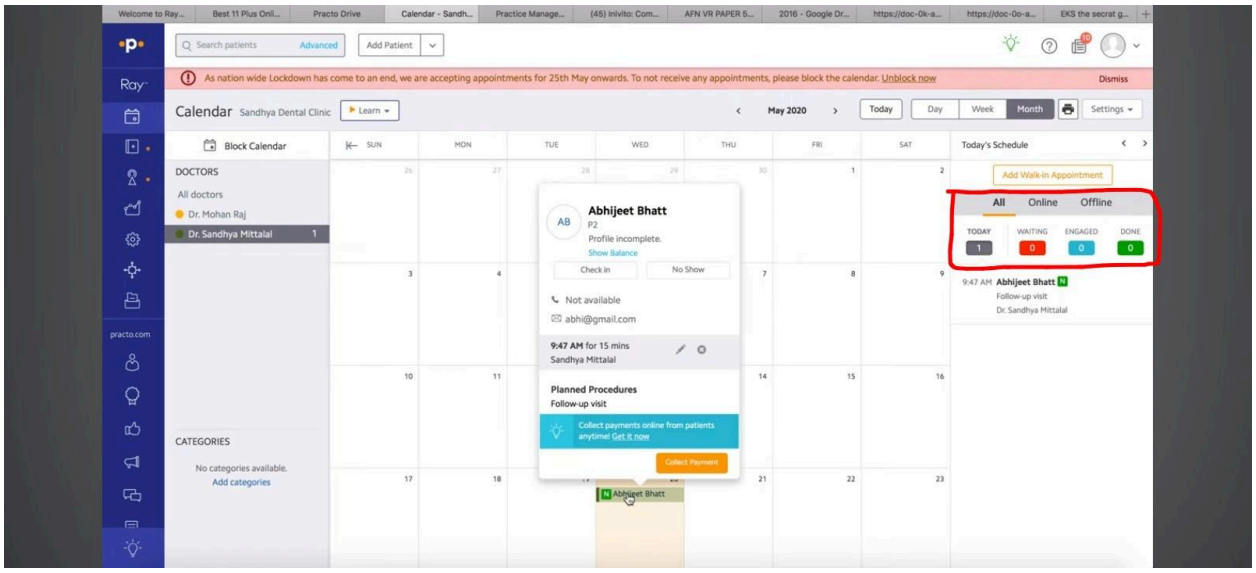

Doctor Staff / Support Team: * Names of the assigned Nurses or Medical Assistants.
Name of the Front-Desk/Receptionist managing the queue for that specific doctor.
Interaction: Clicking on a staff member's name could trigger a "Quick Contact" tooltip (showing their internal extension or mobile number).

Independent Scrolling: If the staff list is long, the Lower Segment should be scrollable independently of the Upper Block Calendar.
Dynamic Staffing: The names in the Lower Segment must be pulled from the "Duty Roster" or "Staff Assignment" module. When a staff member is changed in the Staff Management page, it must reflect here in real-time.

Sticky Persistence: This entire Left Part remains fixed on the screen while the doctor scrolls through time slots in the Middle Part.

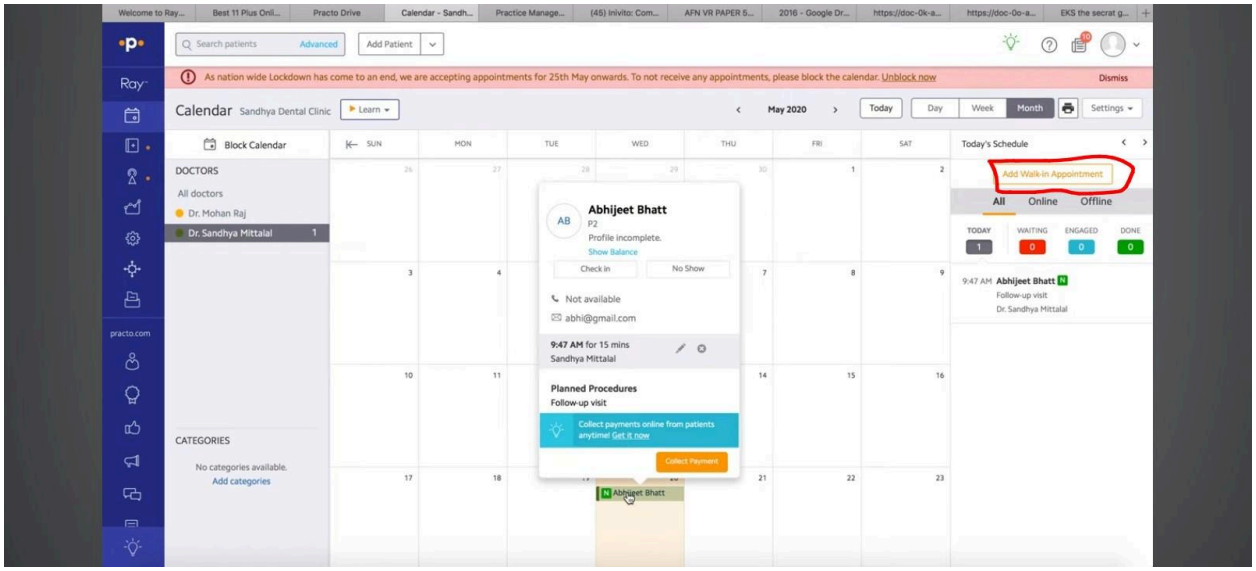

Calendar Right part (Information box)

Information Box (Right Side)

The right panel provides real-time operational summaries and quick-action tools.
Informationbox: Categorized counters for Waiting, Engaged, and Done patients.
Quadrant Sync: The Information Box (Section 4) must update its counters instantly when a change is made in the Calendar (Section 3) or via the Header (Section 1).

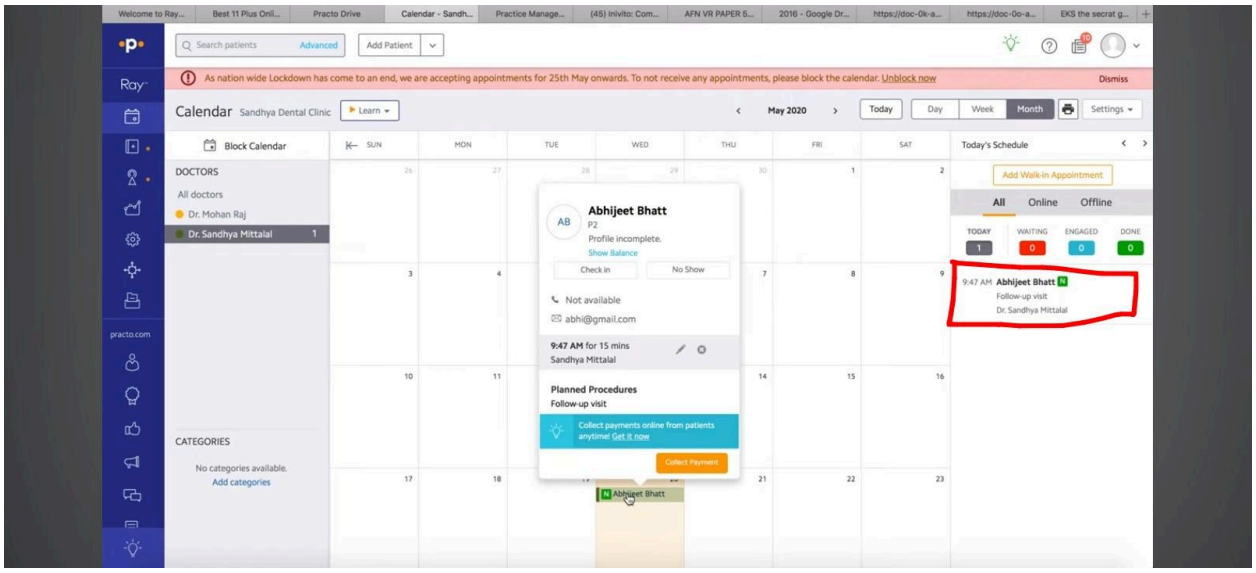

Walk-in Module:

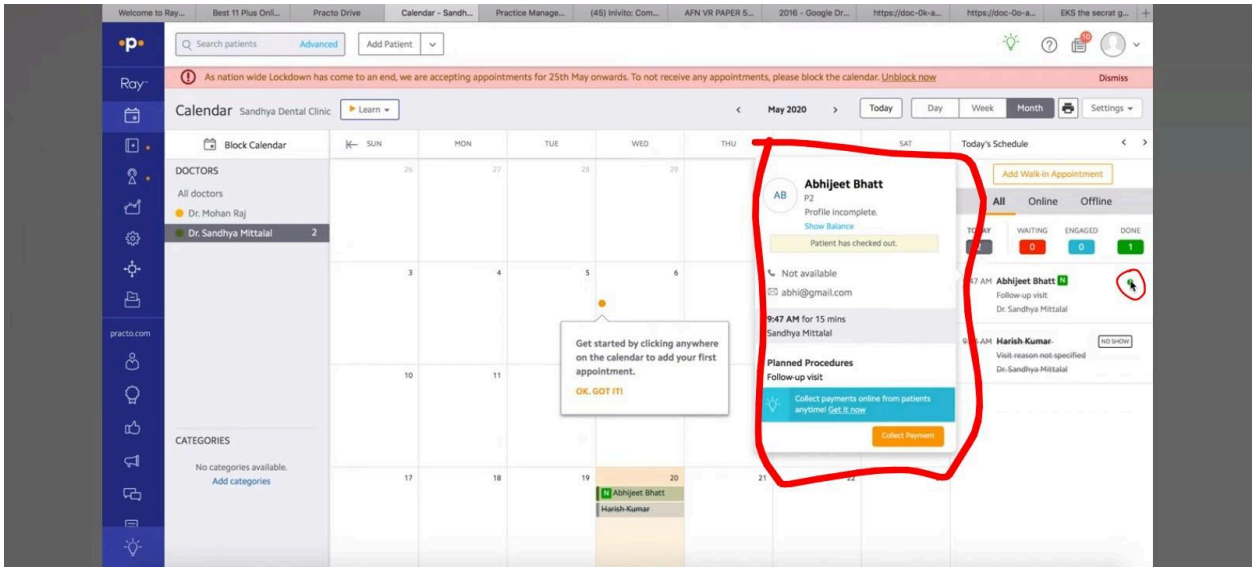

A dedicated box with an "Add Walk-in Appointment" button for instant, real-time bookings.
Responsive Grid: The Middle section (Calendar) must be flexible to expand or contract when the Sidebar is collapsed.
Sticky Layout: Section 1 (Header) and Section 2 (Sidebar) must remain fixed, while Section 3 (Calendar) allows vertical and horizontal scrolling.

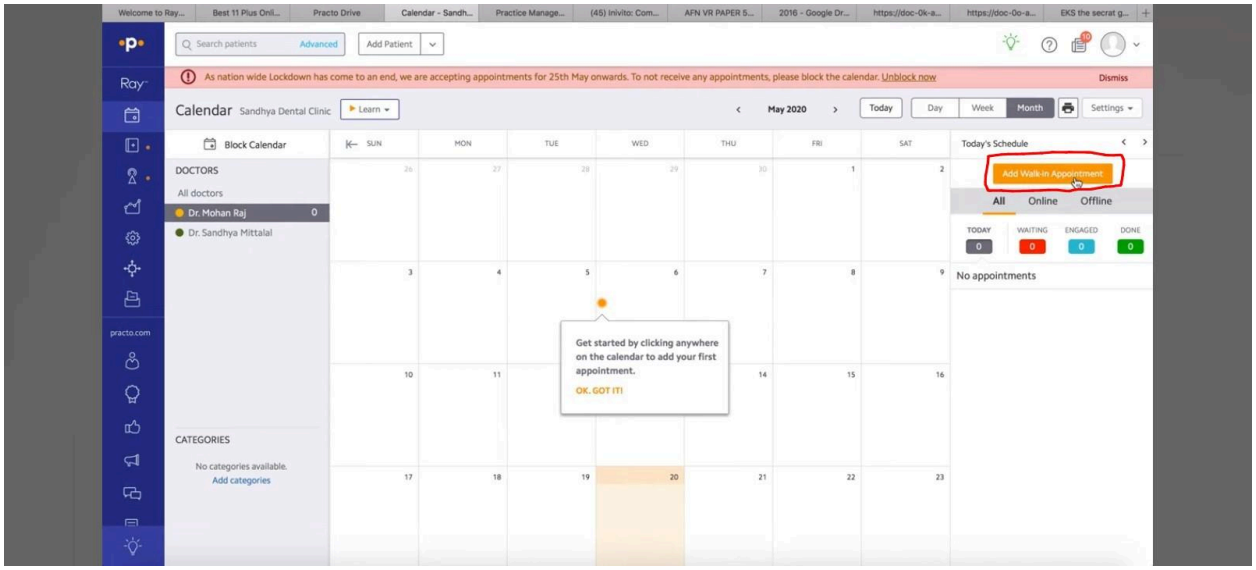

Real-Time Line: A dynamic horizontal line should indicate the current time across the calendar rows.

Walk-in Appointment

This refined specification for the Walk-in Appointment Module optimizes the workflow for maximum speed, ensuring that a doctor can transition from a patient entering the room to writing a prescription in seconds.

Walk-in Appointment Module (Fast-Track Workflow)

Clicking the "Walk-in Appointment" button on the Dashboard shall immediately launch the Patient Appointment Form (Modal).

Registered Patients: Upon entering the Mobile Number or Cura ID, the system shall perform a real-time lookup. If a match is found, all demographic data (Name, Age, Gender, Blood Group, etc.) shall auto-fill instantly.

New Patients: If no record is found, the system shall auto-fill the Appointment Date and Time to the current real-time, leaving demographic fields blank for manual entry.

Post-Save Navigation (Automated Redirection)

To eliminate manual navigation, the "Save" action triggers a specific sequence:

Direct Redirect: Immediately after clicking "Save," the modal closes and the system shall automatically navigate the user to that specific Patient's Dashboard.

Instant Prescription Access: On the Patient Dashboard, the "Write Prescription" button shall be highlighted/focused.

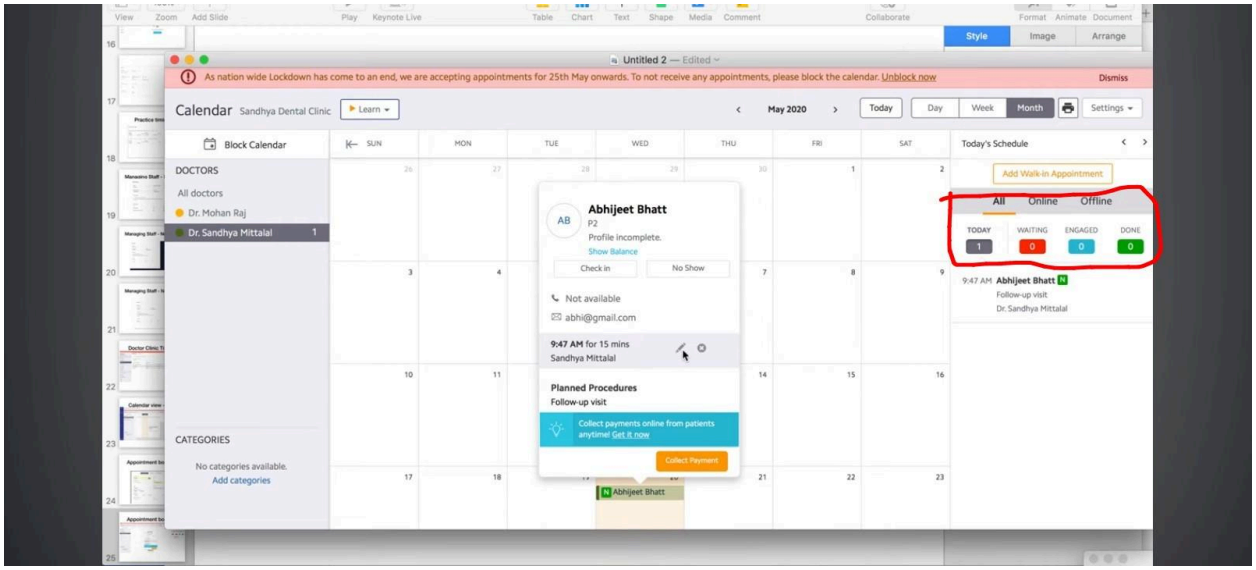

One-Click Form: Clicking this button shall instantly open the Prescription Writing Interface, bypassing all other sub-menus.

Operational Efficiency

The system assigns the next sequential Token/Serial Number for the current session automatically.

SMS Confirmation: As defined in Section the system triggers the Welcome SMS

Real-time information box1

Status Summary (Real-time Information Box)

The Dashboard shall feature a dynamic Information Box that provides a high-level overview of today's patient traffic. This data must update in real-time as patients are processed via WebSockets.

Metrics and Logic

Waiting: This count displays the number of patients who have arrived or checked in but have not yet entered the doctor's room. It signals the current workload sitting in the waiting area.

Engaged: This displays the number of patients currently undergoing consultation. A patient is moved to this category the moment the doctor opens their prescription writing form.

Done: This shows the number of patients whose visits have been completed. A patient is counted here only after the prescription is finalized and saved.

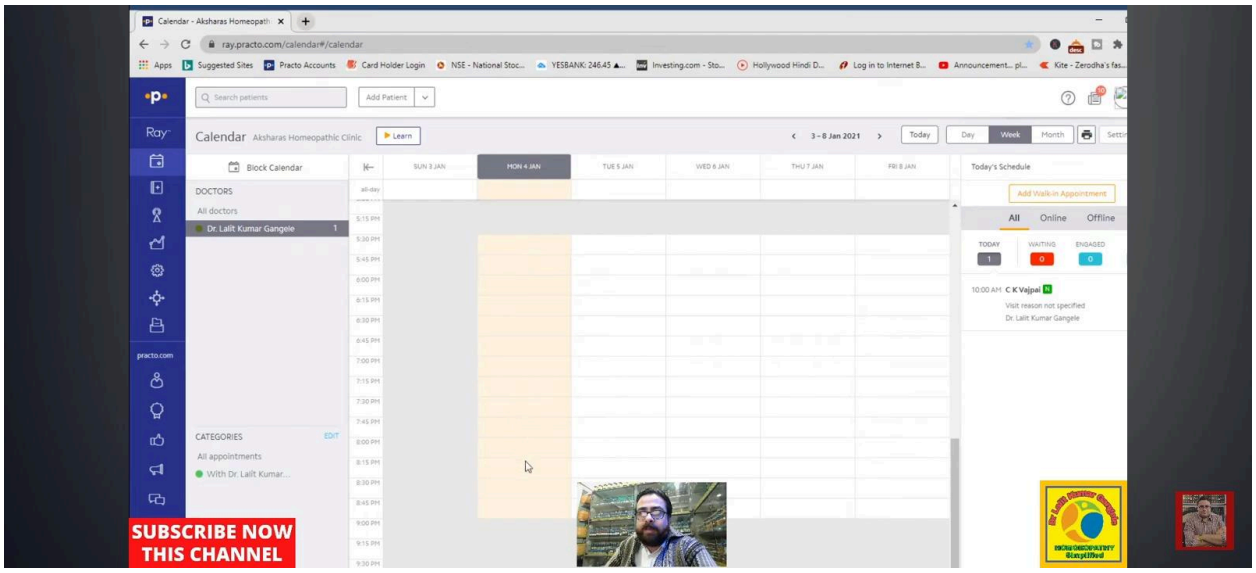

Canceled: This displays the number of appointments that were canceled or marked as "No-Show" for the day. This helps the doctor understand the gap between scheduled appointments and actual arrivals.

Calendar Middle Part

Middle Part (Main Canvas) of the Calendar. This section defines how the grid functions and how appointments are managed visually.

The Middle Part: Interactive Calendar Grid

This is the core of the calendar where the doctor views and manages their daily workflow. The grid dynamically adjusts based on the header selection.

1. Grid Axis Logic

The main canvas is structured as a coordinate system to map time against dates:

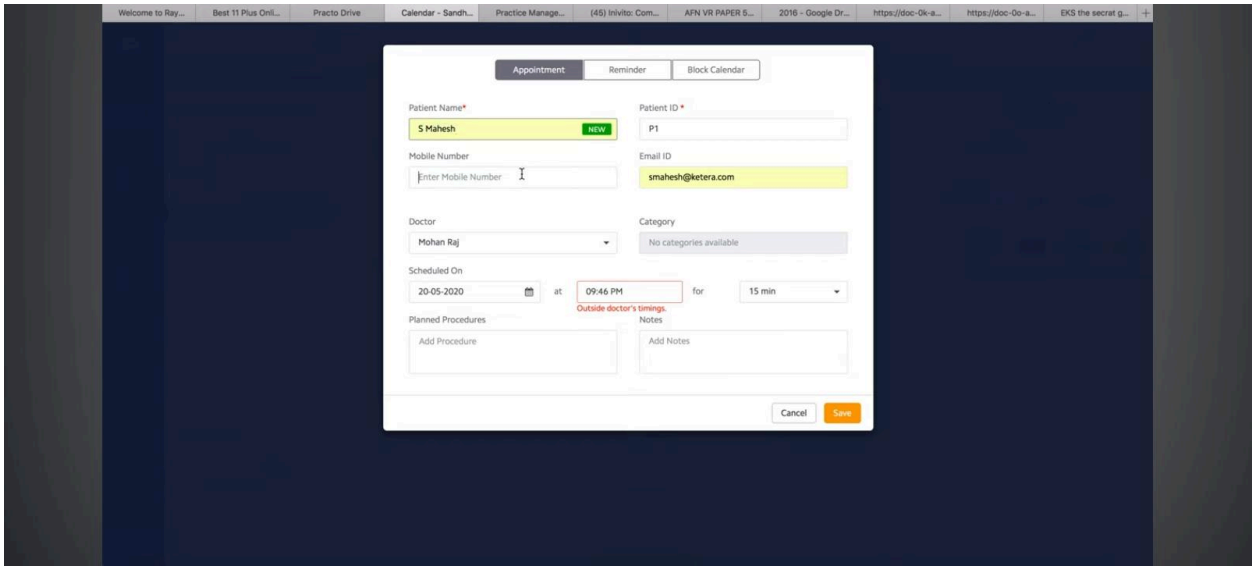

• X-Axis (Horizontal): Represents the Days.

- Day View: Shows only the selected day (e.g., Sunday/Today).
- 3-Day View: Shows three consecutive days (e.g., Sun, Mon, Tue).
- Weekly View: Displays a full 7-Day spread.

• Y-Axis (Vertical): Represents the Time Slots.

• The time intervals are generated based on the doctor's pre-defined session timings and slot durations (e.g., 10-minute or 15-minute intervals).

Duration between start Time to end time/doctor Duration period

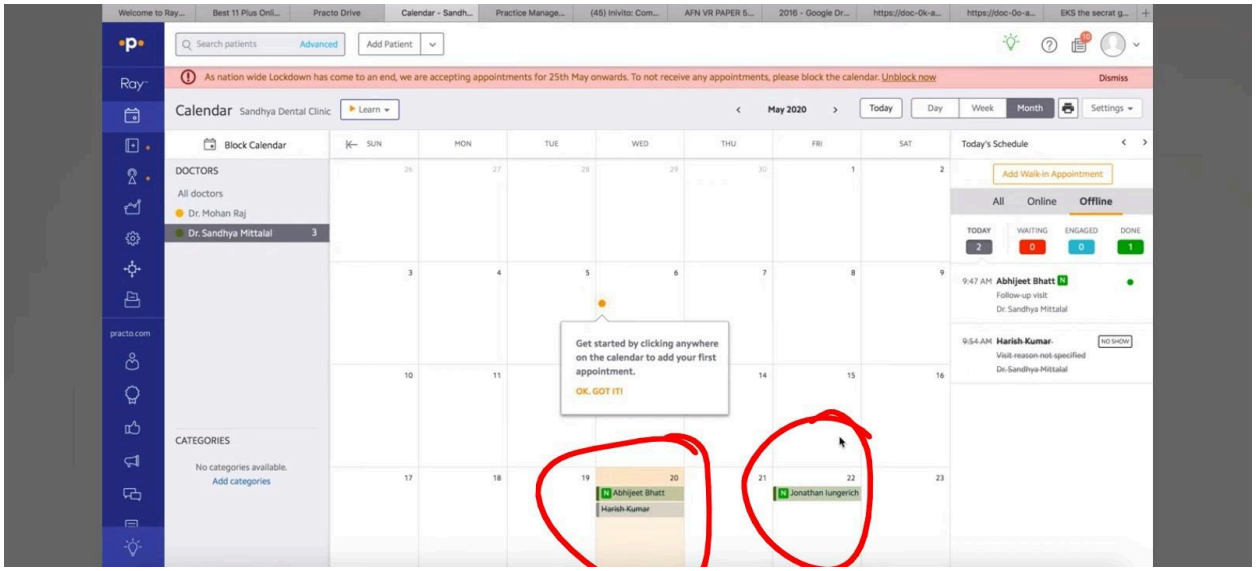

2. Interaction & Appointment Booking

• The Center Point (Slot Box): Every intersection of the X and Y axes creates a Box (Slot).

• Booking a Patient: * To add a new appointment, the user simply clicks on an empty Box.

• Upon clicking, an "Add New appointment" form/modal opens.

• Confirmation Workflow:

• Once the patient details are filled and the user clicks "Save," the appointment is confirmed.

• Automated Notification: Immediately after saving, an Appointment Confirmation SMS is sent to the patient's registered mobile number.

3. Visual Indicators & Patient Labeling

To help the doctor identify the type of patient at a glance, each name in the grid will be prefixed with a specific status code:

- N (New): For first-time patients.

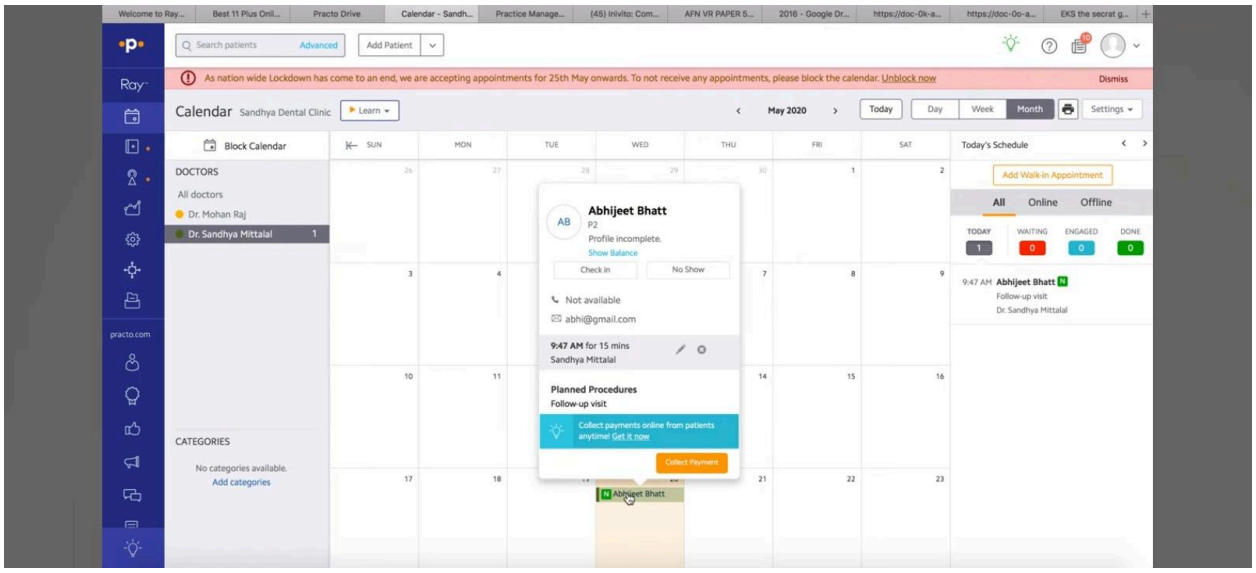

- F (Follow-up): For patients returning for a review.
- O (Old): For existing patients with a previous history but not a direct follow-up.

Developer & Technical Logic Notes:

• Dynamic Rendering: The grid must re-render instantly when the user toggles between Day, 3-Day, and Weekly views without a full page refresh.
• SMS Integration: Ensure the SMS trigger is asynchronous (background task) so that the UI doesn't freeze while waiting for the SMS gateway response.
• Labeling Logic: In the database, the appointment record must contain a patient_type flag (N, F, O) to automatically generate the prefix in the grid view.
• Responsive Slot Sizing: The width of the columns (X-axis) should adjust proportionally based on whether 1, 3, or 7 days are being displayed.

Following your latest notes, this section defines the Right Part (Contextual Pane) of the Calendar. This area acts as the "Patient Snapshot" or "Details Box," allowing the doctor to view and manage specific patient data without leaving the main calendar view.

The Right Part: Patient Details Box

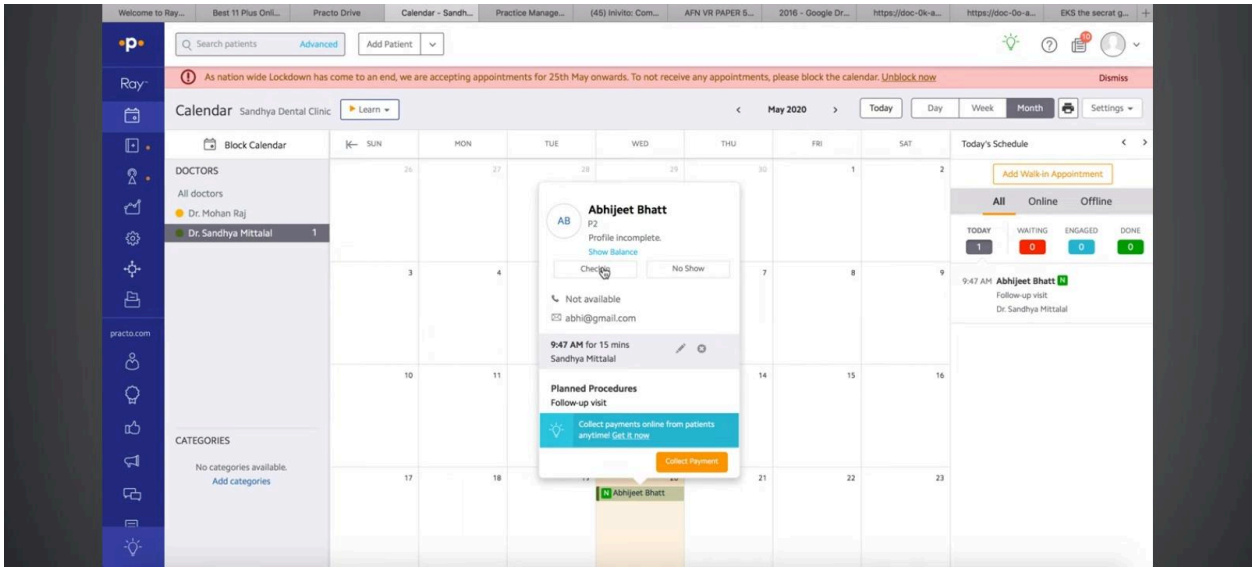

When an appointment card is touch in the Middle Part, the Right Part shall immediately populate with the following information and functional controls:

1. Patient Profile Summary

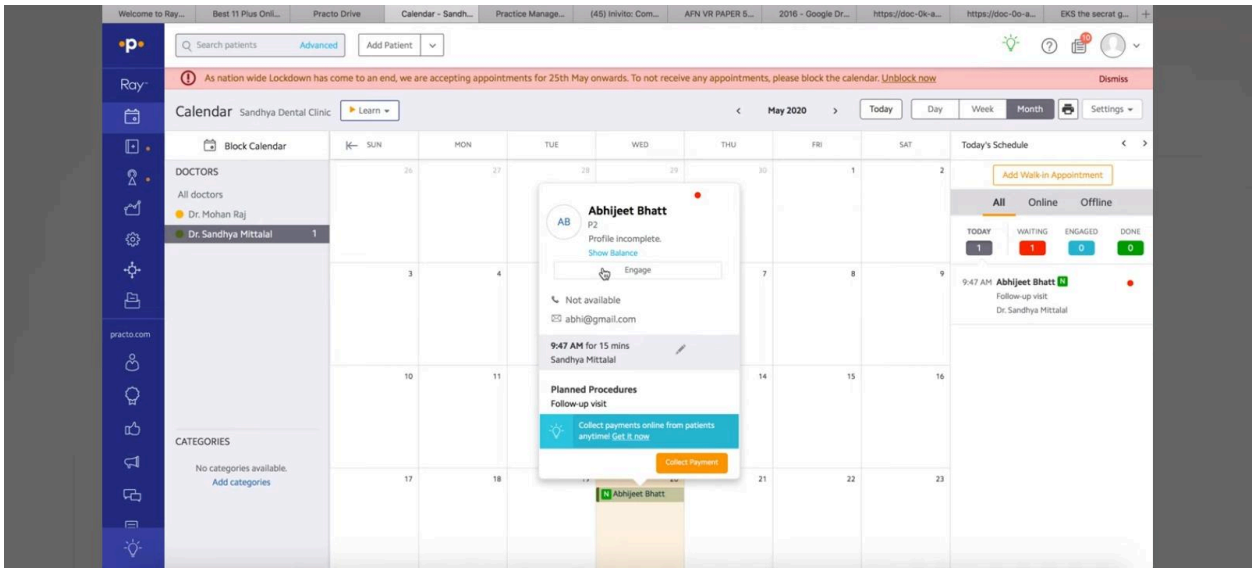

• ① Patient Name: The full name of the patient.
• ② Profile Picture: A thumbnail of the patient for quick visual identification.
• ③ ID: The unique Patient ID Number.

• ④ Profile Completion Indicator: A visual status bar or icon indicating whether the patient's profile is Complete or Incomplete (e.g., missing address, blood group, or age).
• ⑤ Contact Info: Displays the patient's Phone Number and Email ID for quick reference.
2. Status & Attendance Controls
• ⑥ Attendance Check-box: A toggle or button area to mark the patient's current status:

Check-in:

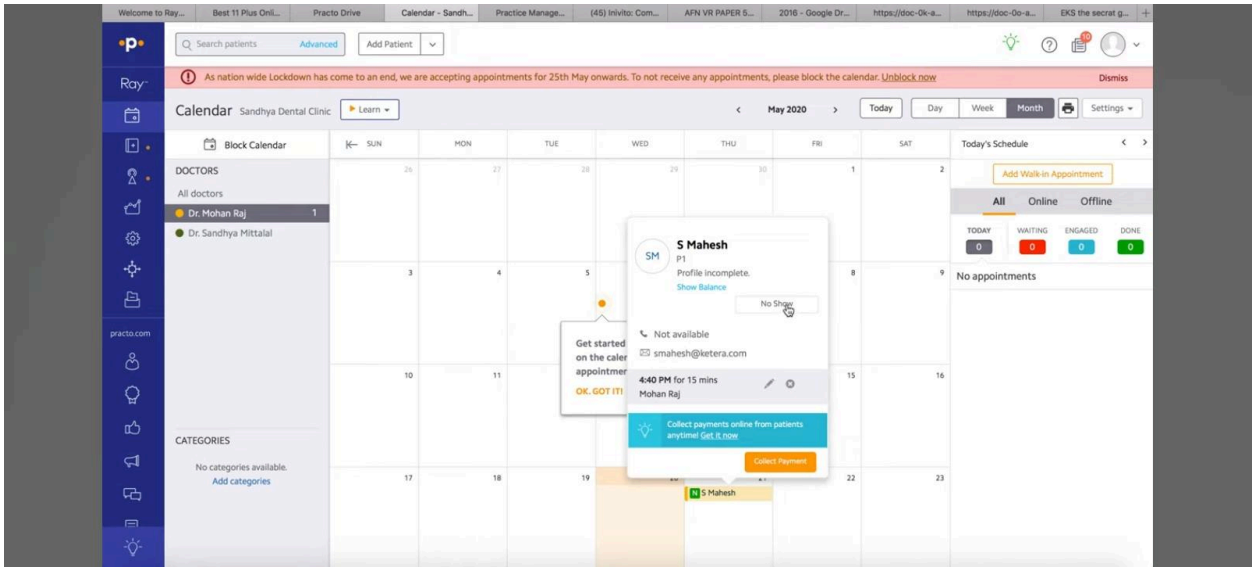

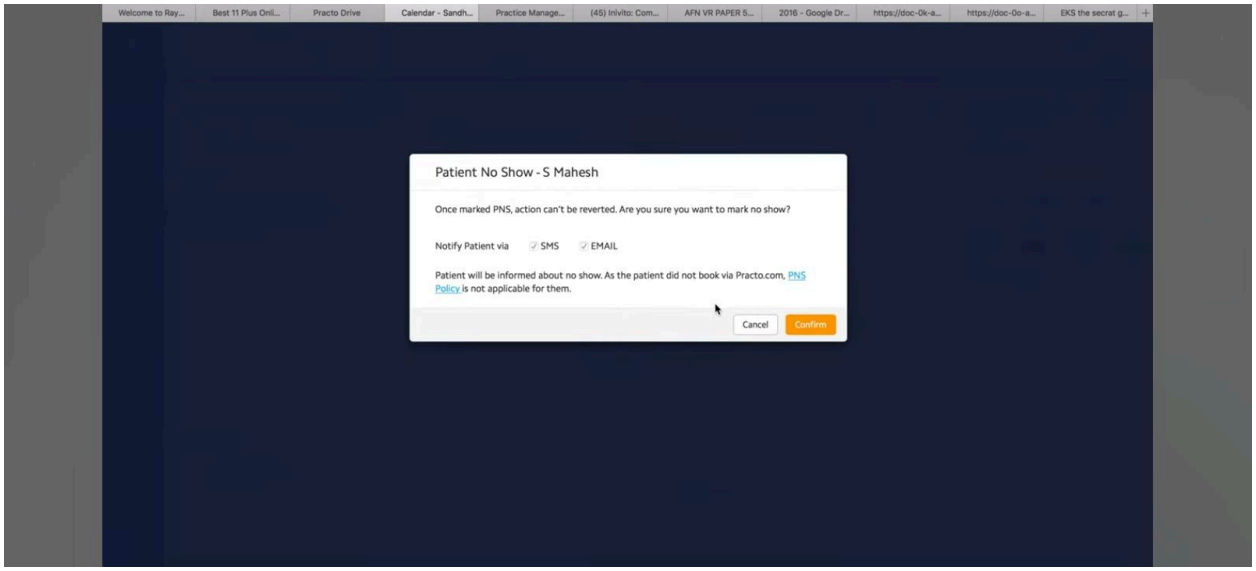

After check in (Engage)

Confirms the patient has arrived at the clinic.

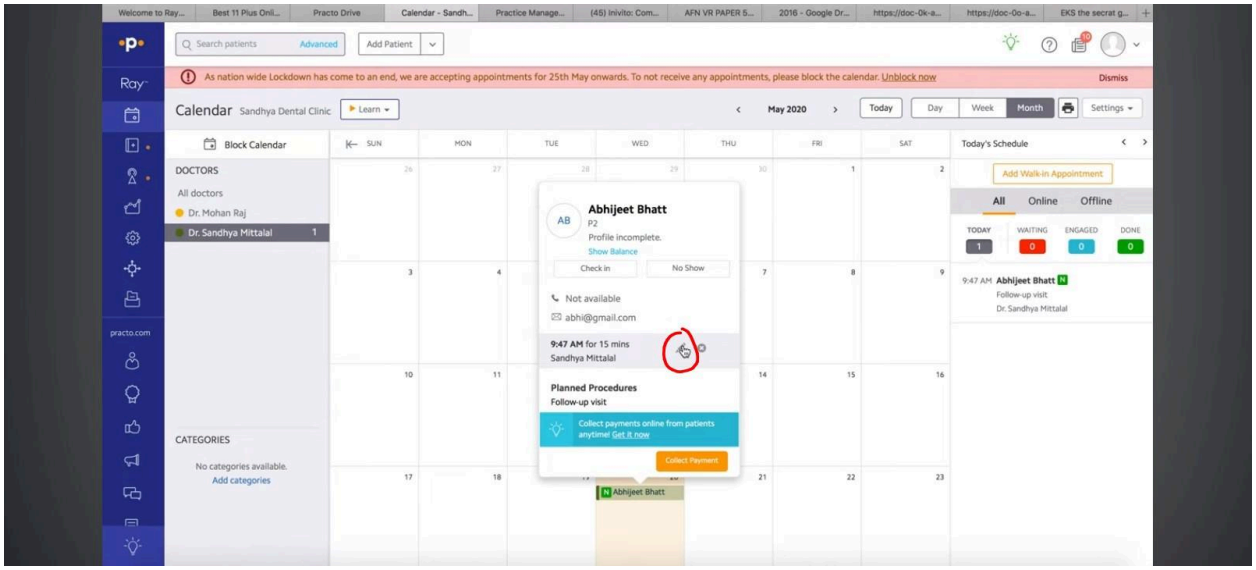

• No Show:

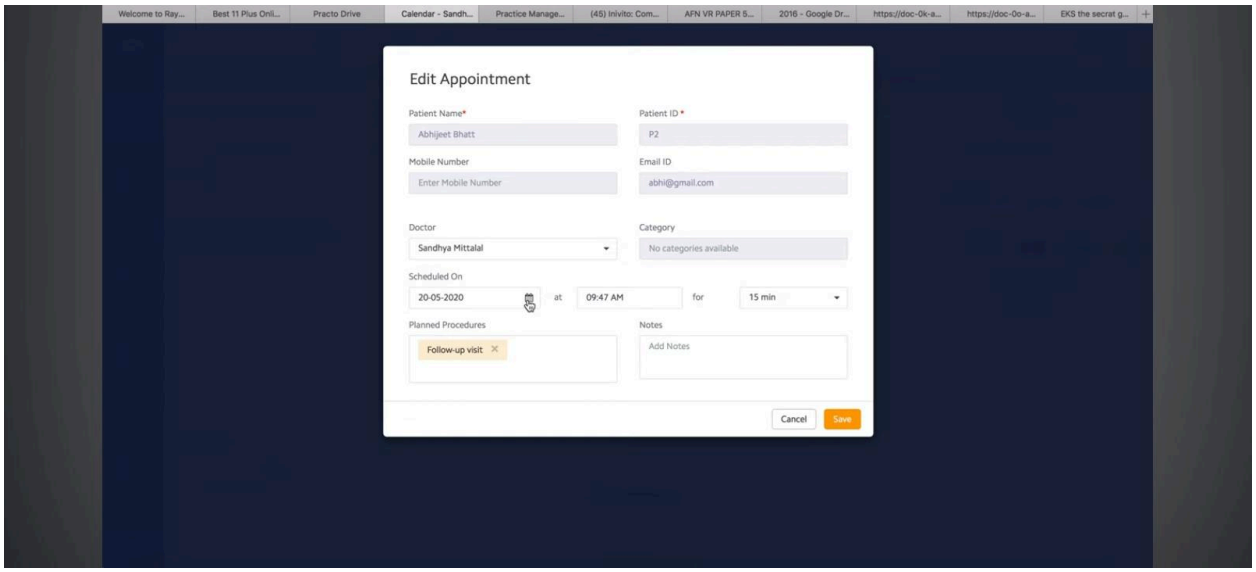

Marks the patient as absent for that specific slot.

3. Clinical & Scheduling Context

• ⑥ Appointed Time & Edit: Displays the original time slot. An "Edit" option allows for rapid rescheduling or slot adjustments.
• ⑦ Planned Procedures: Shows the reason for the visit (e.g., Follow-up Visit, Root Canal, Vaccination, etc.).

4. Navigation to Full Records

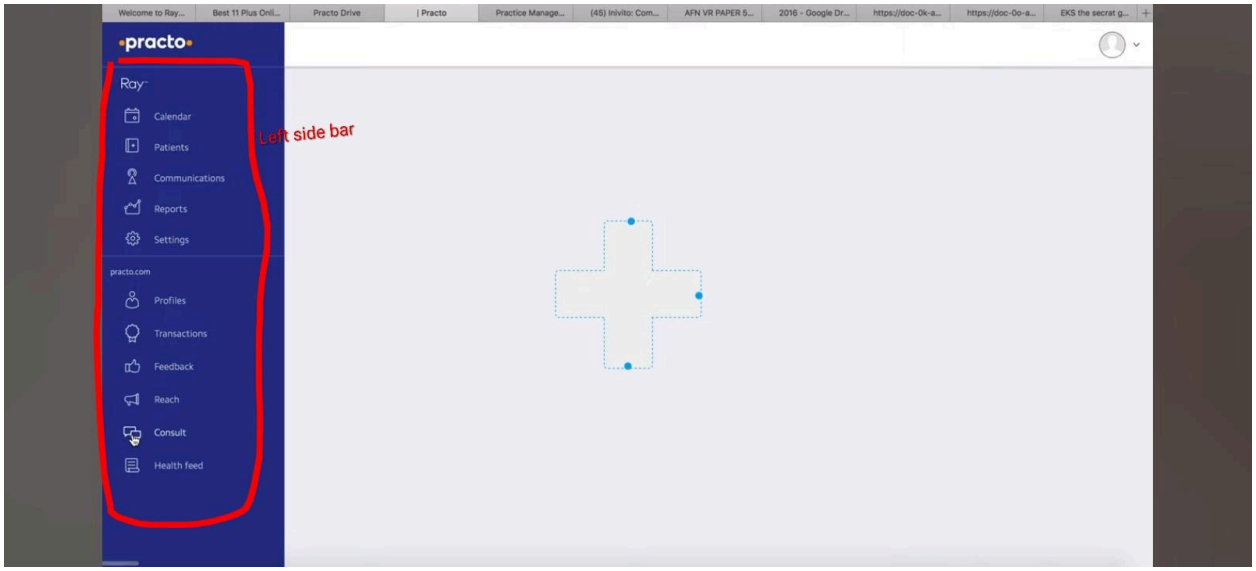

• Profile Link: Clicking on the Patient Profile (or ID) will trigger a redirect to the full **Patient Dashboard**, where the doctor can view the comprehensive medical history, past prescriptions, and billing.

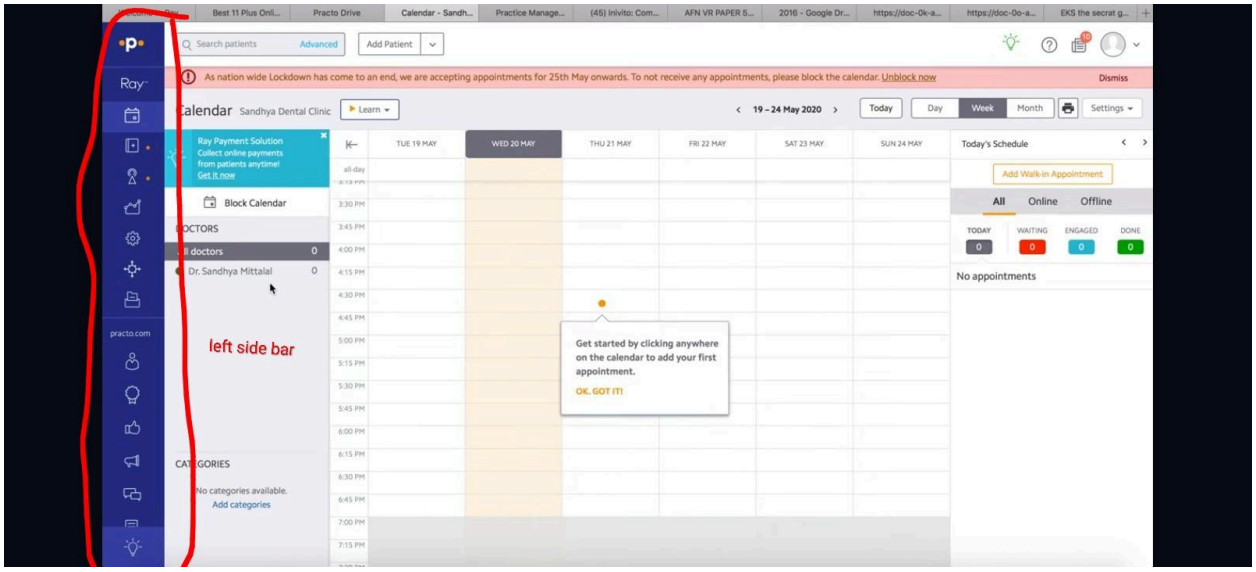

Developer & Technical Logic Notes:

• Fixed Position: The Right Part must be sticky/fixed. Even if the doctor scrolls through a long list of slots in the Middle Part, the Details Box should remain visible for the selected patient.
• Live Edit (AJAX): If the doctor changes the status (e.g., clicks "Check-in"), the status should update in the database instantly without a page refresh, and the corresponding card in the Middle Part should change color.

• Dynamic Visibility: If no appointment is selected, the Right Part should show a placeholder message: "Select a patient slot to view details."
• Profile Indication Logic: * Complete: All mandatory fields filled.
• Incomplete: Triggers a subtle warning icon, prompting the staff to collect missing data.
Summary of the "Details Box" Layout

Left Sub-Navigation Bar

Overview

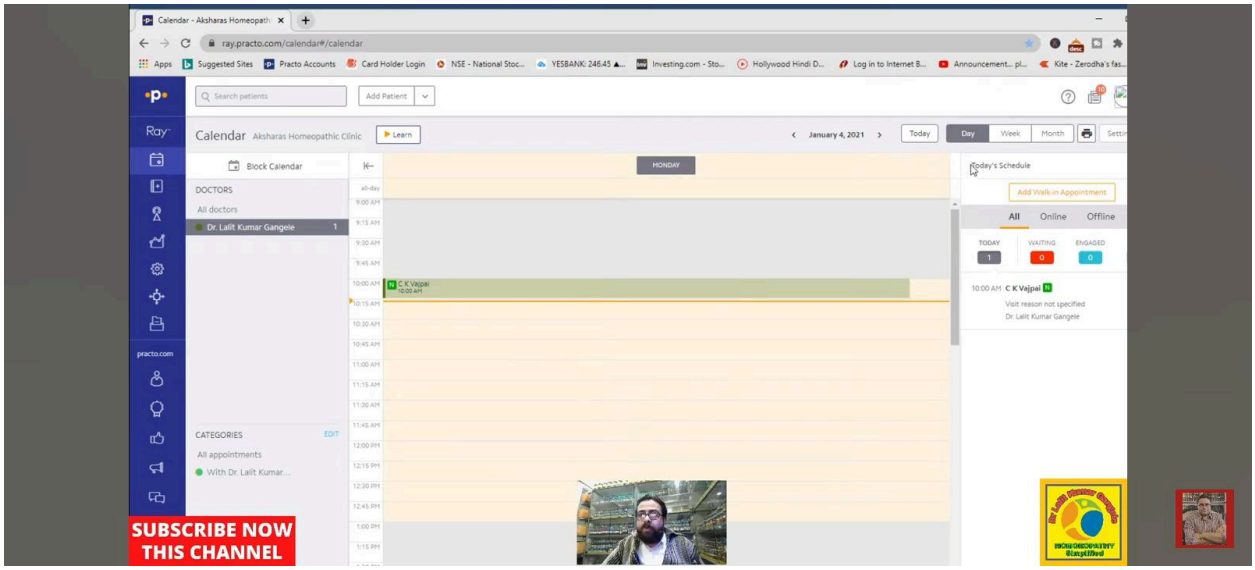

A persistent Sidebar Navigation shall be implemented on the left side of the screen (or as a collapsible menu). This menu allows the doctor to switch between different operational, clinical, and administrative modules seamlessly.

Module List & Navigation Items

1. Patient: Access to the comprehensive Patient Database and electronic health records (EHR).
2. Calendar: Direct link to the main scheduling interface (Default View).

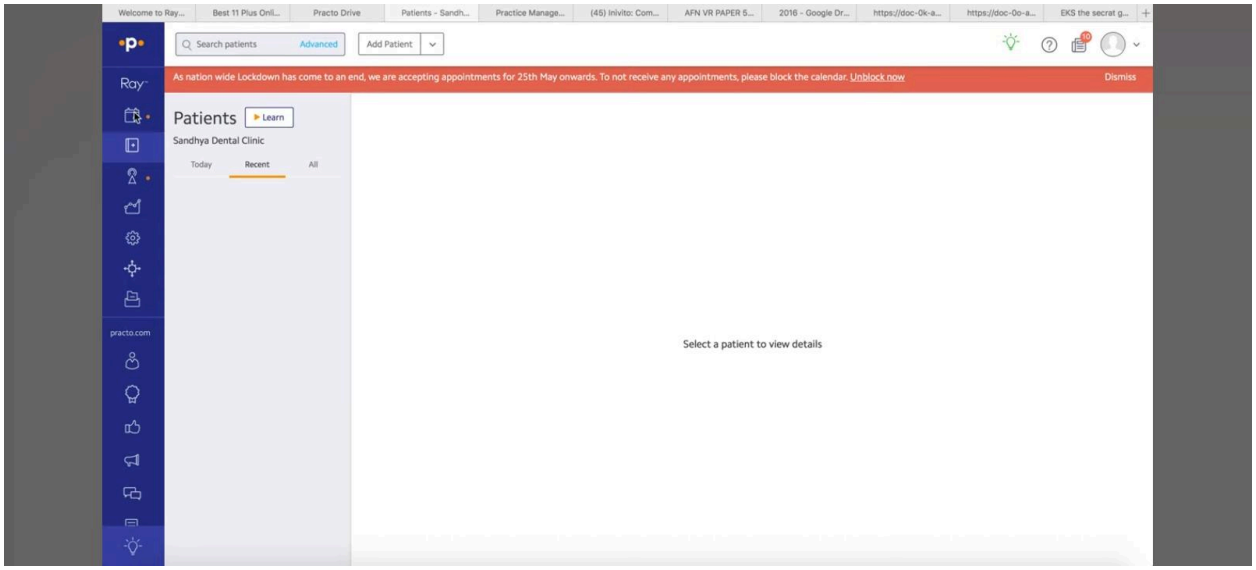

3. Settings: Global application configuration, including clinic preferences and security.
4. Communication: Tools for SMS, Email, and internal messaging with patients or staff.
5. Patient Management: Tools for managing patient queues, triage, and historical records.
6. Integration: Management of external software connections and API hooks.
7. Statistics: Data analytics and reporting (e.g., patient demographics, visit trends).
8. Practo Integration: A dedicated bridge to sync appointments and data with the Practo platform.
9. Profile Management: Detailed editing of professional credentials, signatures, and biography.
10. Community: Access to professional forums, peer networking, or medical news.
11. Prime Services: Access to premium/add-on features within the application.
12. Feedback Management: Reviewing and responding to patient ratings and service feedback

Patient Module

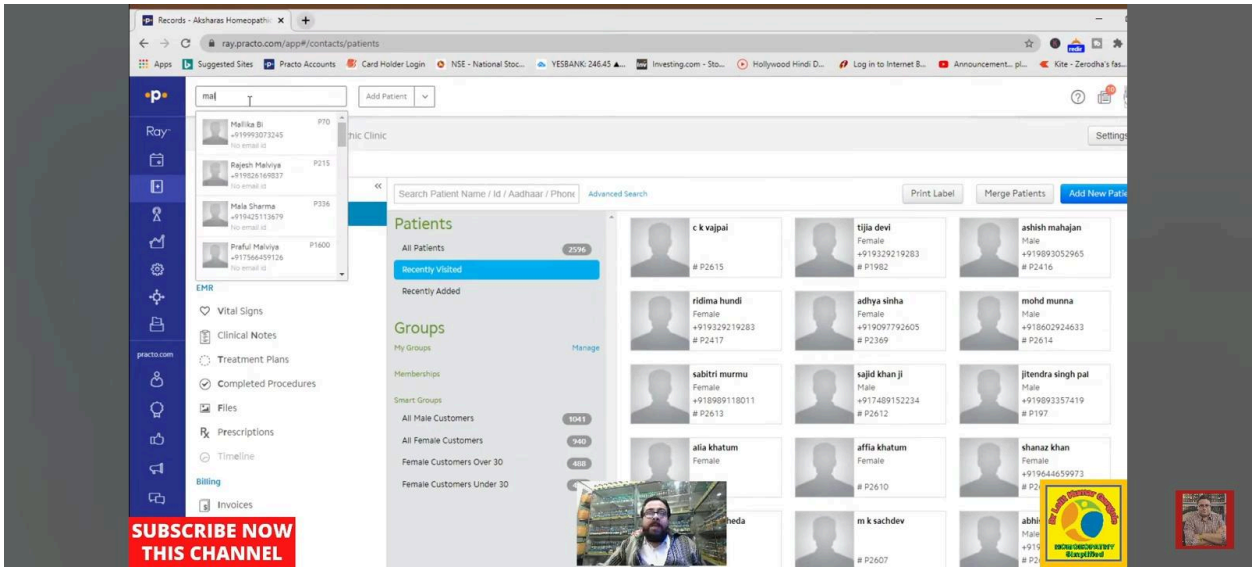

Not Complete

Not Complete

Patient Module

Patient List & Search Functionality

The interface is designed to help the doctor locate records quickly, whether they are looking for a patient currently in the waiting room or a historical record.

Default View: Upon navigation to the Patient page, the list shall automatically sort by Most Recent Visit.

Each entry must display the Patient's Profile Picture (or initials avatar) and Full Name for easy identification.

Search: A persistent search bar shall allow lookups via Name or Patient ID (Cura ID) or phone number.

Filtering: Today: Shows only patients scheduled or checked-in for the current date.

Recent: Filters for patients seen within the last seven (7) days.

All: Displays the complete patient directory.

Not Complete

Data Privacy & Access Control (Security Protocol)

This module implements a "Privacy-First" architecture to protect sensitive health information.

Three-Month Privacy Window: By default, the system restricts the doctor’s view to the last 90 days of clinical documentation.

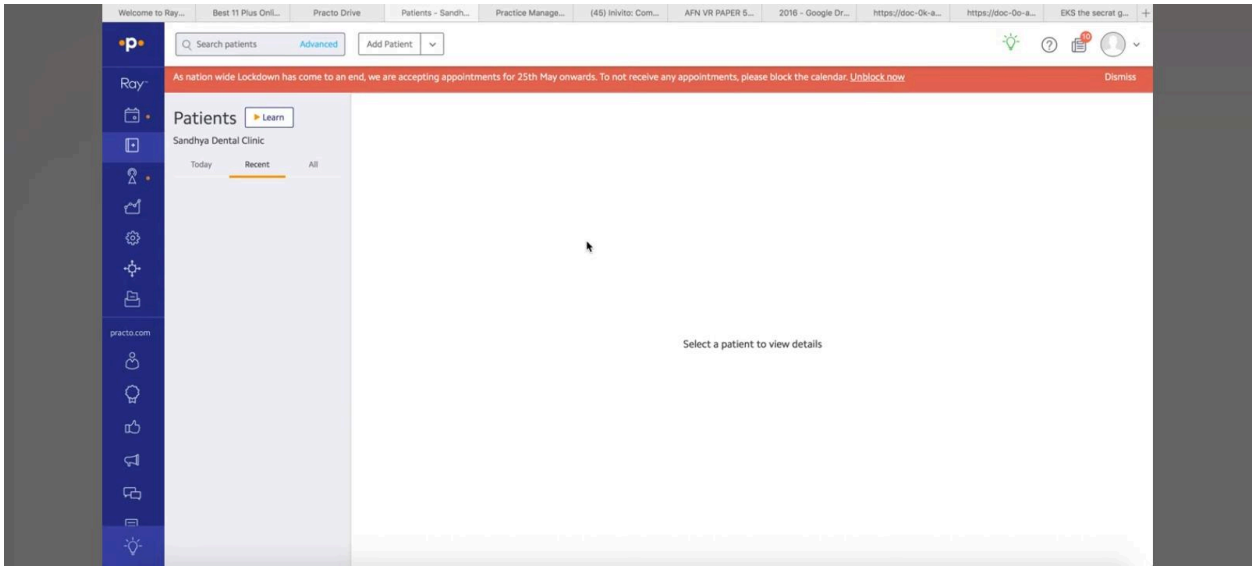

Prescriptions (including the doctor's own past work) older than 3 months are hidden from the standard view to prevent unauthorized data mining.

Basic Information Access: The doctor maintains permanent access to the "Basic Profile" (Name, Age, Gender, Blood Group) and uploaded diagnostic reports.

Full History Access (Patient Consent): The Unlock Mechanism: To view records older than 3 months or sensitive historical data, the doctor must trigger a Consent Request.

Protocol: Once the patient provides explicit consent (via a digital prompt or OTP system), the system shall "Unlock" the full medical timeline

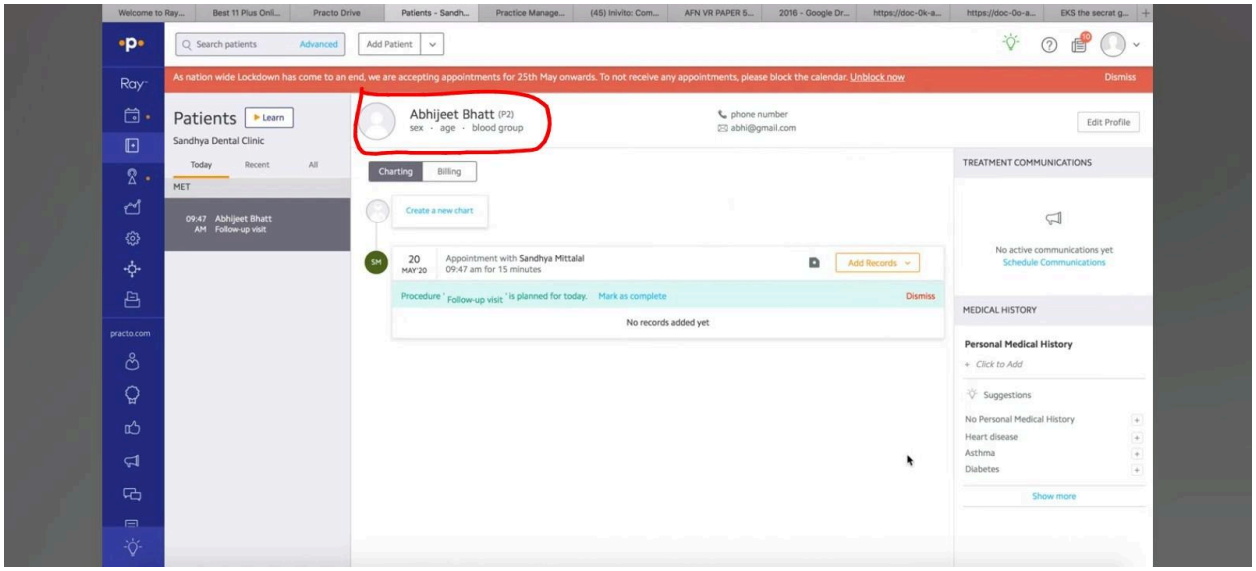

Patient Dashboard

Patient Dashboard

The dashboard is engineered as a Single-Page Application (SPA) utilizing a Persistent Four-Box Architecture. The primary objective is to eliminate "navigation fatigue" by ensuring the clinical context remains visible and static while performing complex data entry.

1. Header Box:

Identity & Clinical Summary

Purpose: Serves as the global anchor for patient identification and high-level medical awareness.

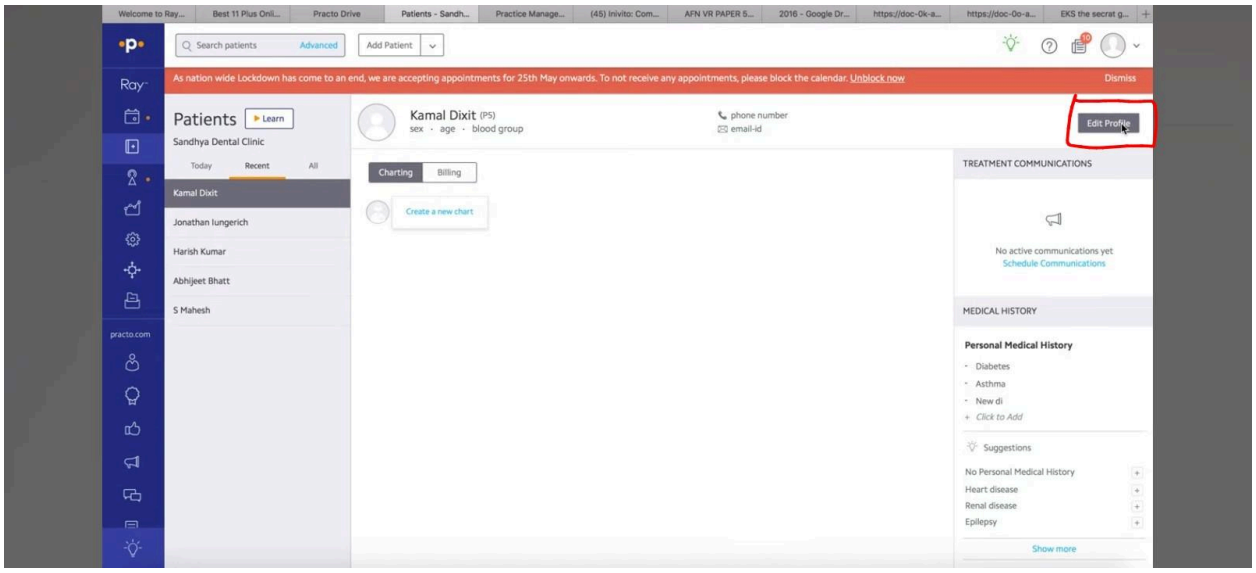

Persistent Identity: Real-time rendering of Profile Picture, Full Name, and unique Patient ID.

Biometric Metadata: Quick-read vitals: Sex, Age, and Blood Group.

Medical Snapshot: A high-visibility brief of chronic conditions (Medical History) and the most recent 3–5 surgical interventions.

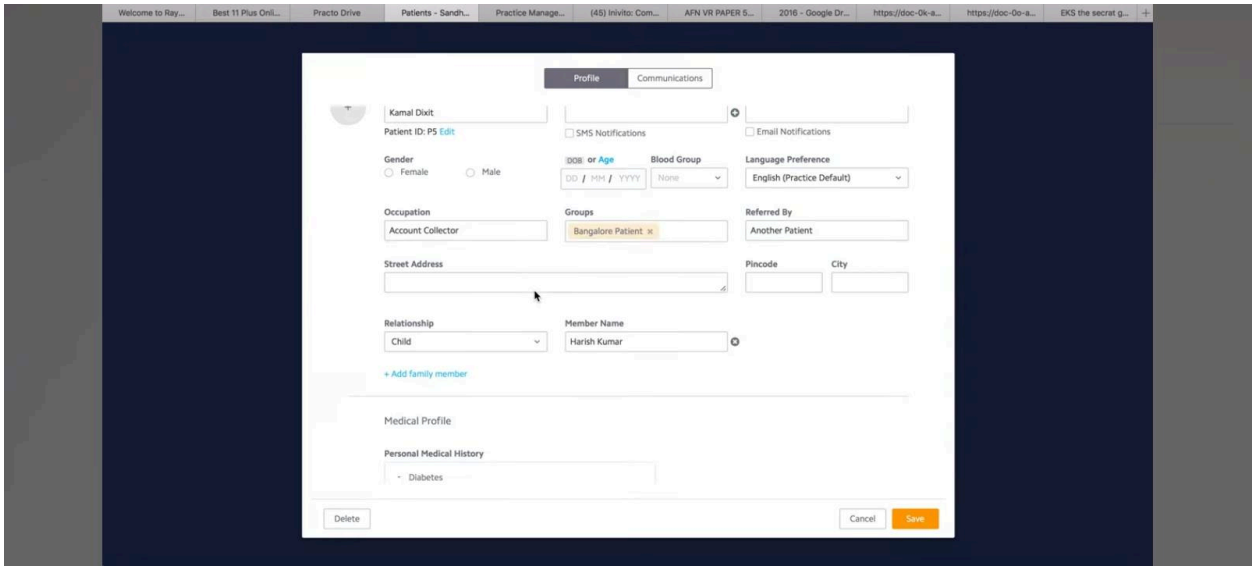

Action Logic:

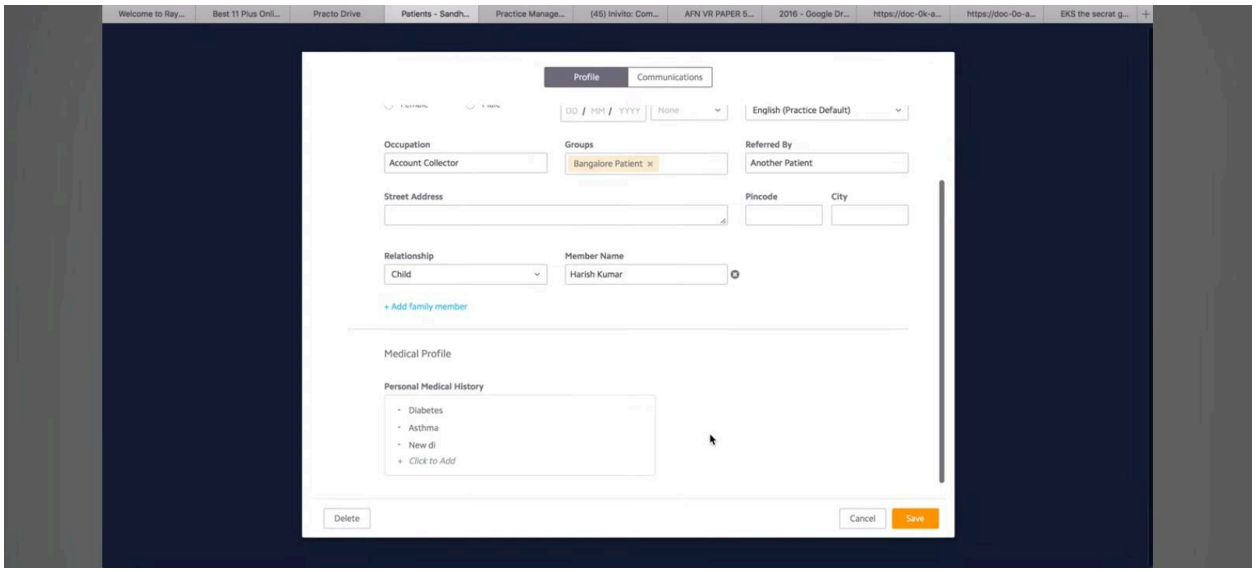

Edit Profile:

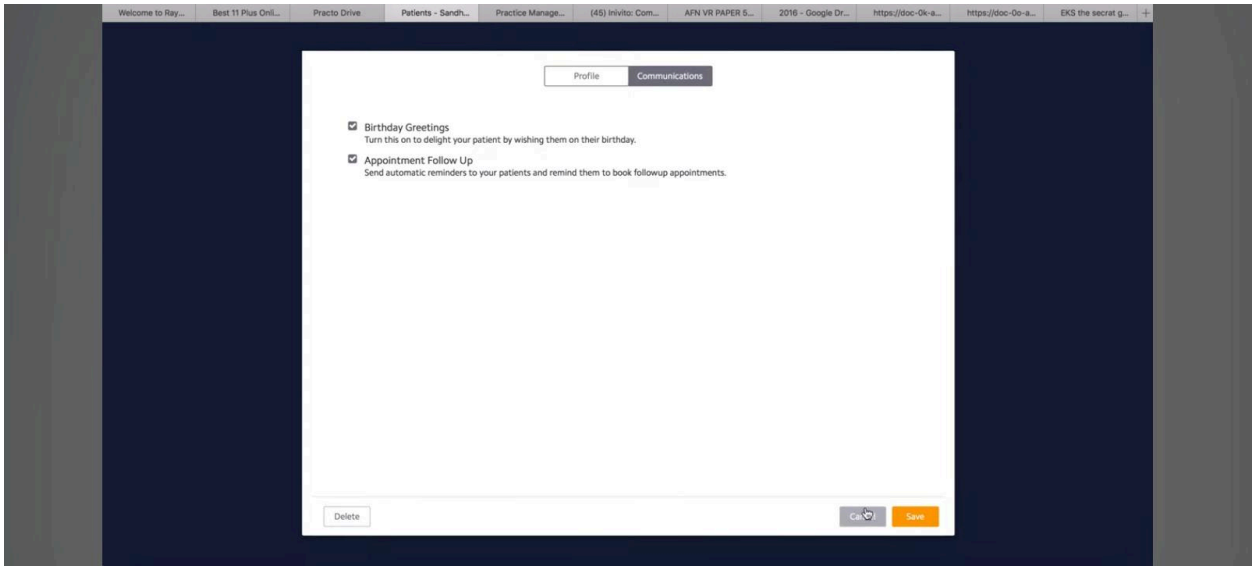

Triggers a route to the comprehensive

- Patient Registration module:

- Communication Module:

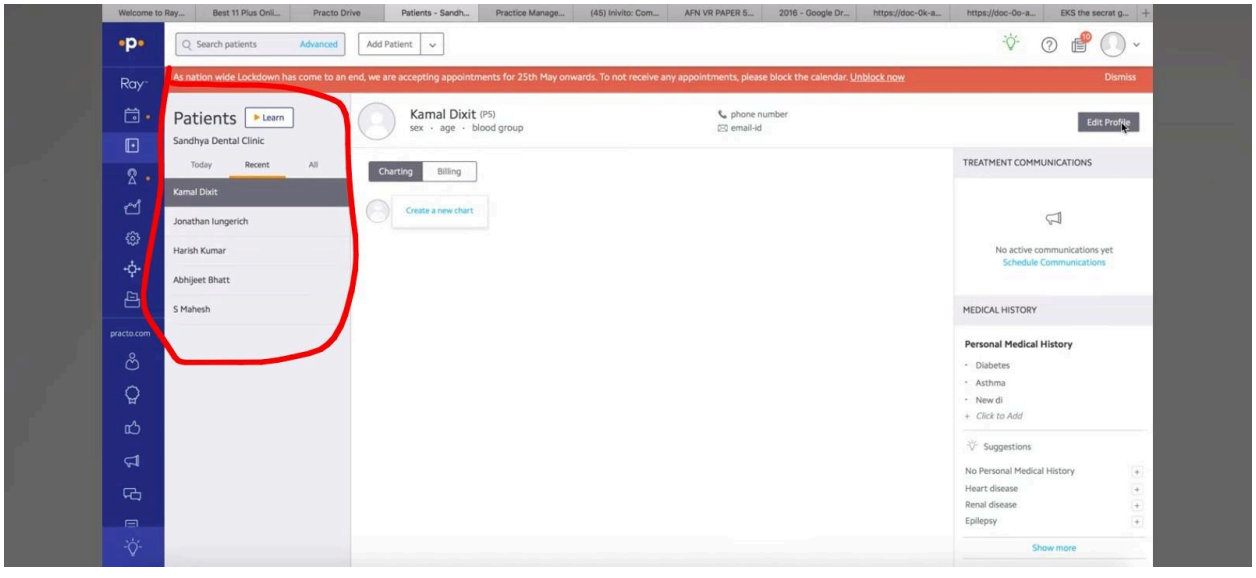

Invokes a dedicated UI for managing contact logs, secure messaging, and notification preferences.

2. Left Box:

Navigation & Queue Orchestration

Purpose: A contextual sidebar for workflow management and patient state transitions.

Clinic Branding: Static display of the current practice/facility name.

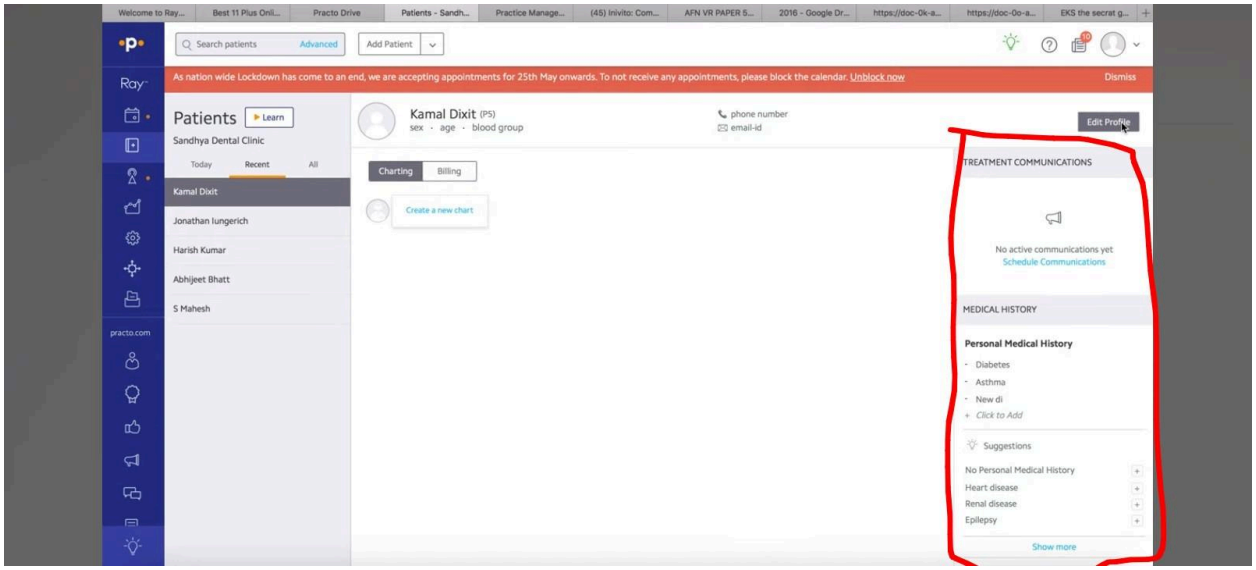

Workflow Toggles:

- Today: Active appointments for the current session.
- Recent: Patients accessed within a rolling 72-hour window.
- All: Global directory search and access.

Dynamic Roster: A list component displaying patient names with real-time Status Badges: Check-in, Engaged, Done, Cancel, and Signed (Record Locked).

3. Right Box:

Contextual Intelligence & Reactive History

Purpose

History Vault: A condensed summary of historical records with an [Add] trigger for quick-entry updates to the patient's past medical history.

: An adaptive "Smart Assistant" that modifies its UI based on the active focal point in the Middle Box.

Observer-Pattern Logic:

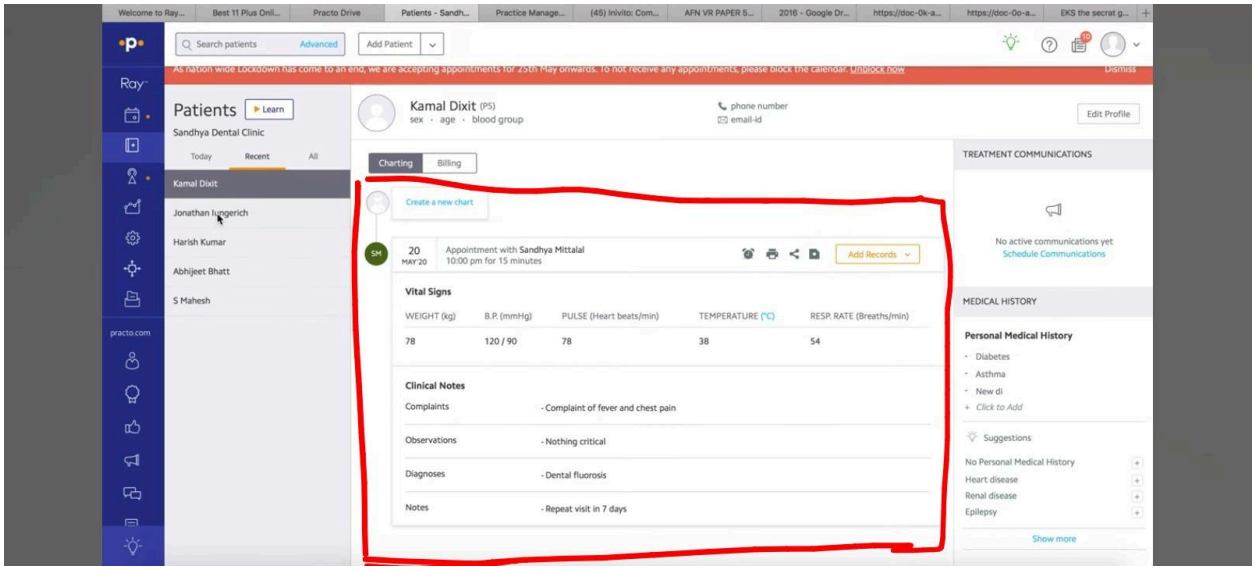

Focus (Clinical Notes): Automatically populates a checklist of "Common Complaints" for rapid-fire selection.

Focus (Prescription): Surfaces "Intelligent Suggestions" for Medications and Diagnostic Tests based on historical data and the clinic's formulary.

4. Middle Box:

The Interactive Clinical Timeline

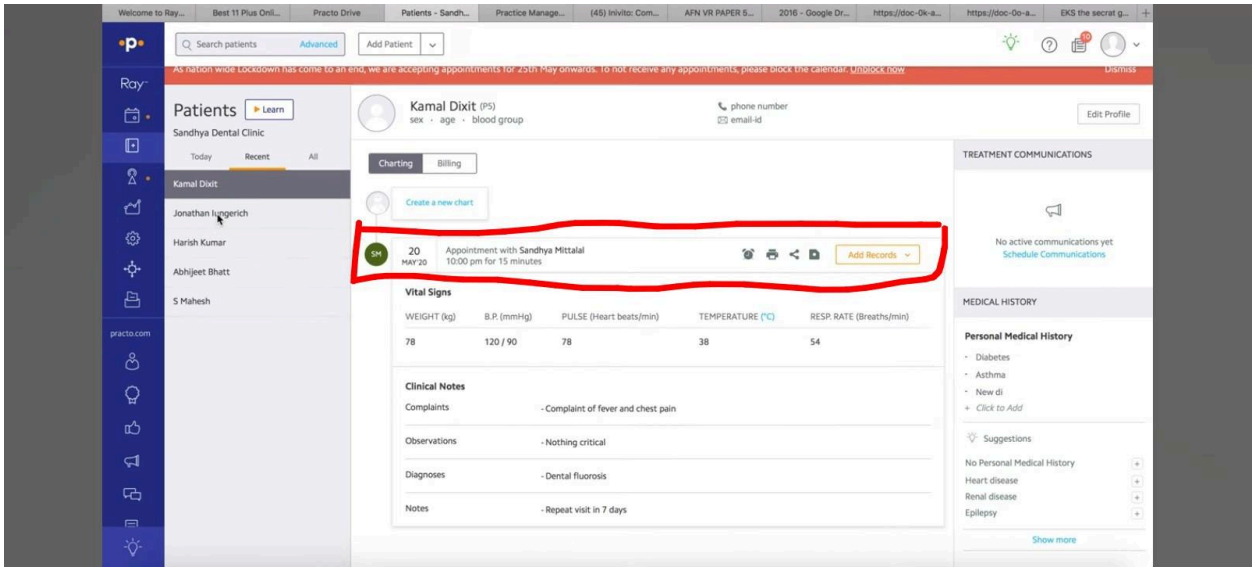

Purpose: A chronological repository of patient encounters designed for rapid review and seamless data entry.

A. Timeline Architecture

Chronological Feed: A scrollable, vertical timeline displaying up to 1 year of patient history.

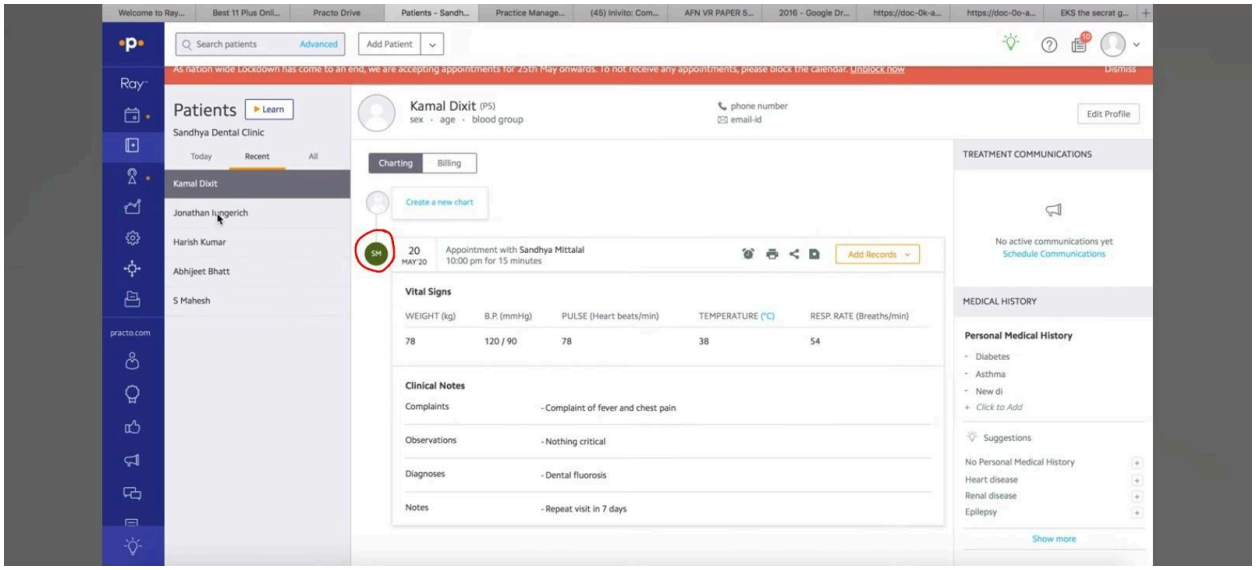

Pinned Logic:

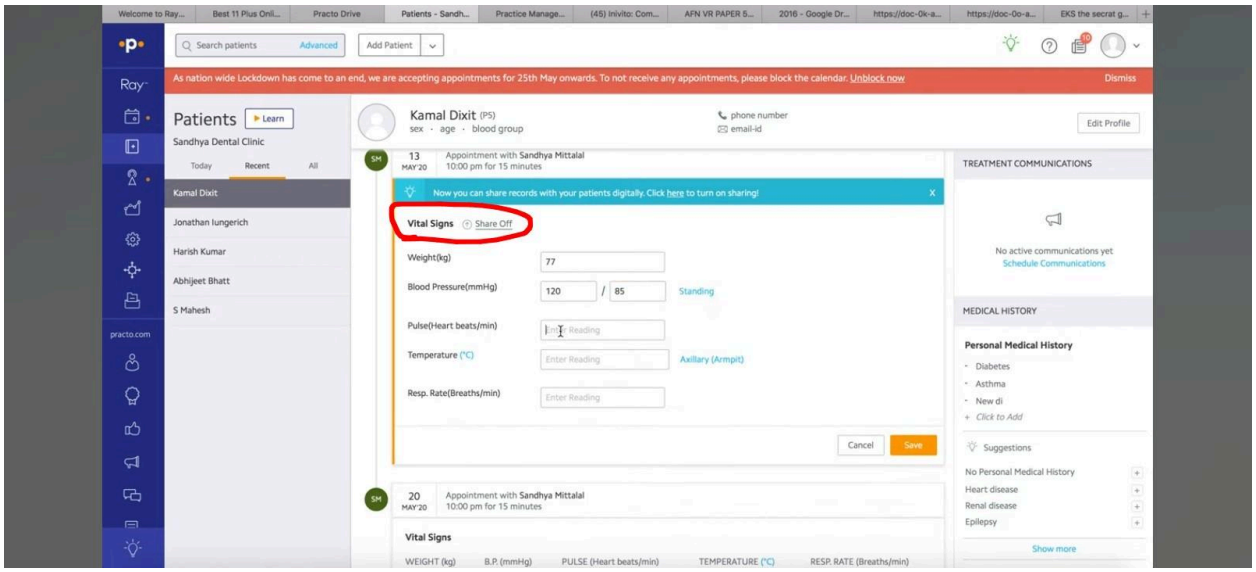

Current-day data is pinned to the top. If no data exists for a specific date, the section remains hidden to maintain UI cleanliness.

Encounter Header:

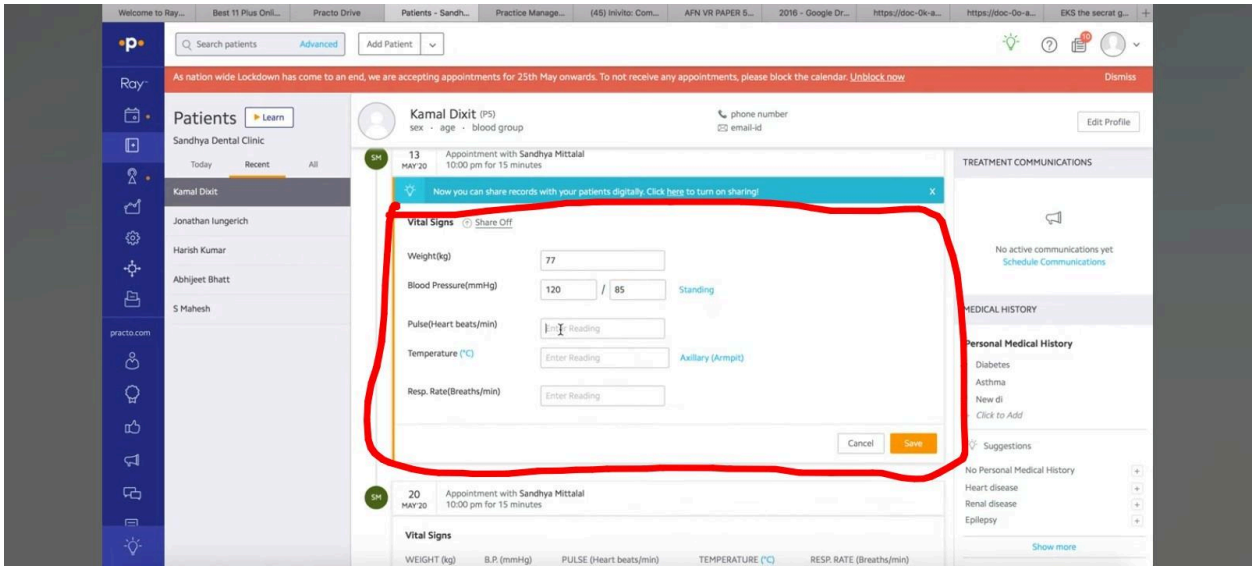

Doctor Profile:

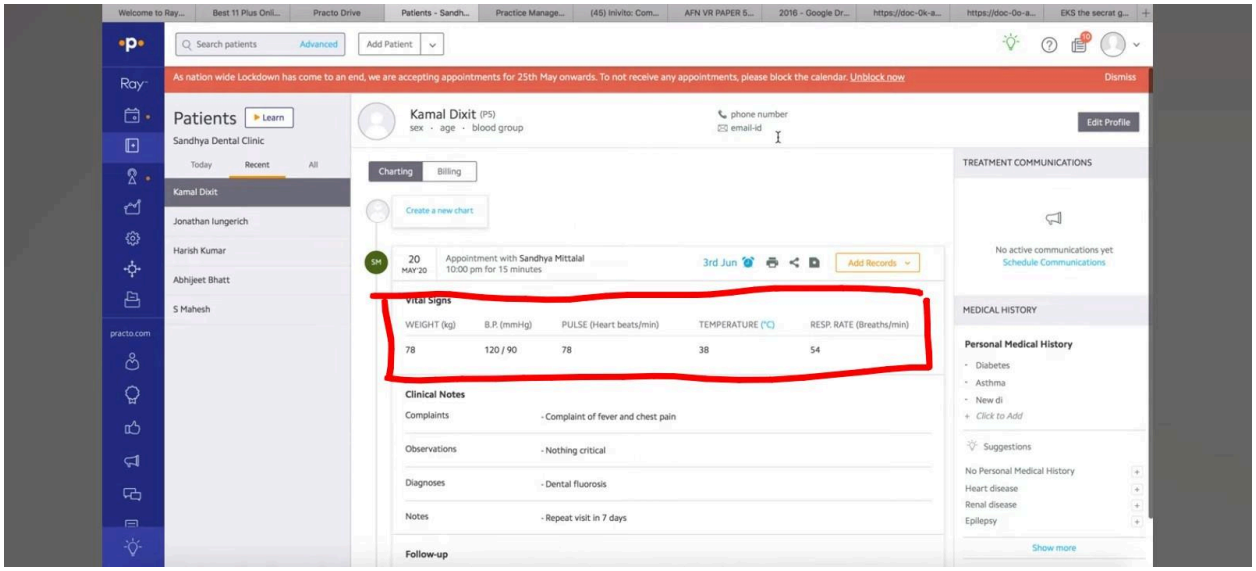

Displays the attending physician.
Interaction: Hover/Touch triggers the Doctor's Digital Visiting Card.
Metadata: Displays precise Date/Time stamps.
Action Footer: Every entry includes a persistent action bar: Follow-up, Print, Share, and Extended Options.
B. Integrated Data Modules (Zero-Redirect System)

All modules utilize a Zero-Redirect Policy. Clicking [Add] expands an inline form directly within the timeline context.
I. Vital Signs Module

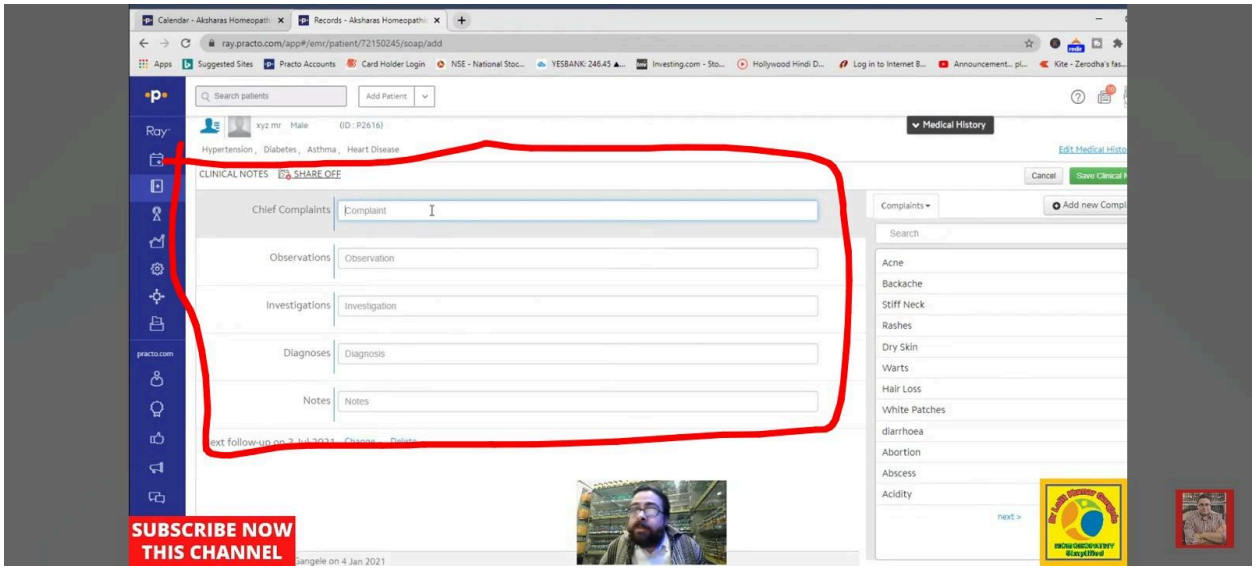

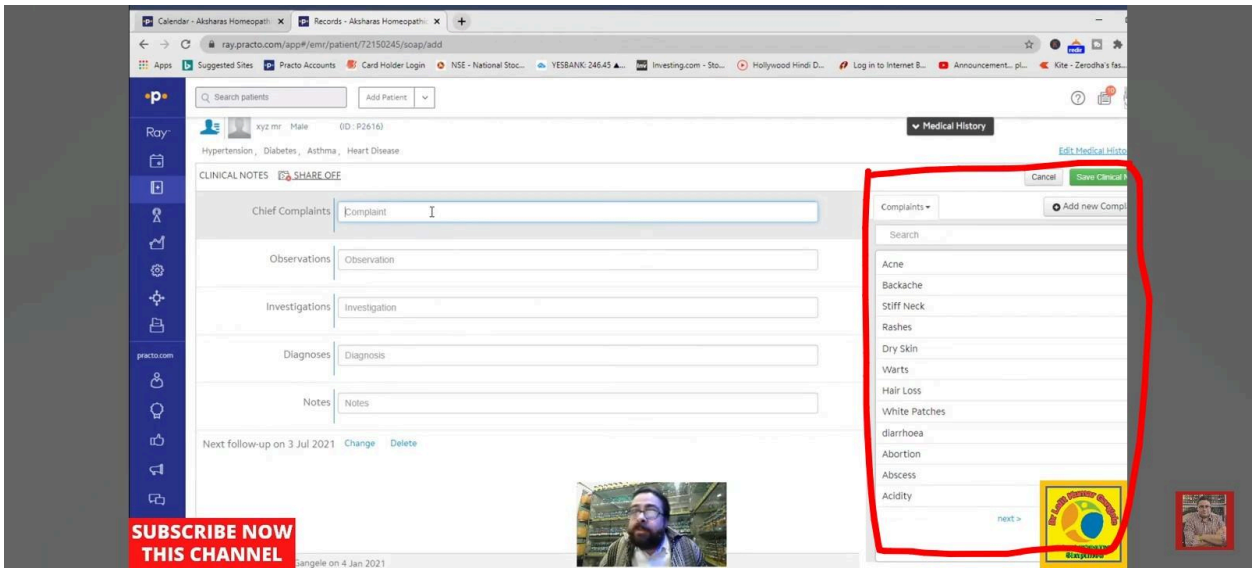

Data Capture: Weight (kg), Blood Pressure (mmHg), Pulse (bpm), Temperature (°C), and Respiratory Rate.
Post-Save State:

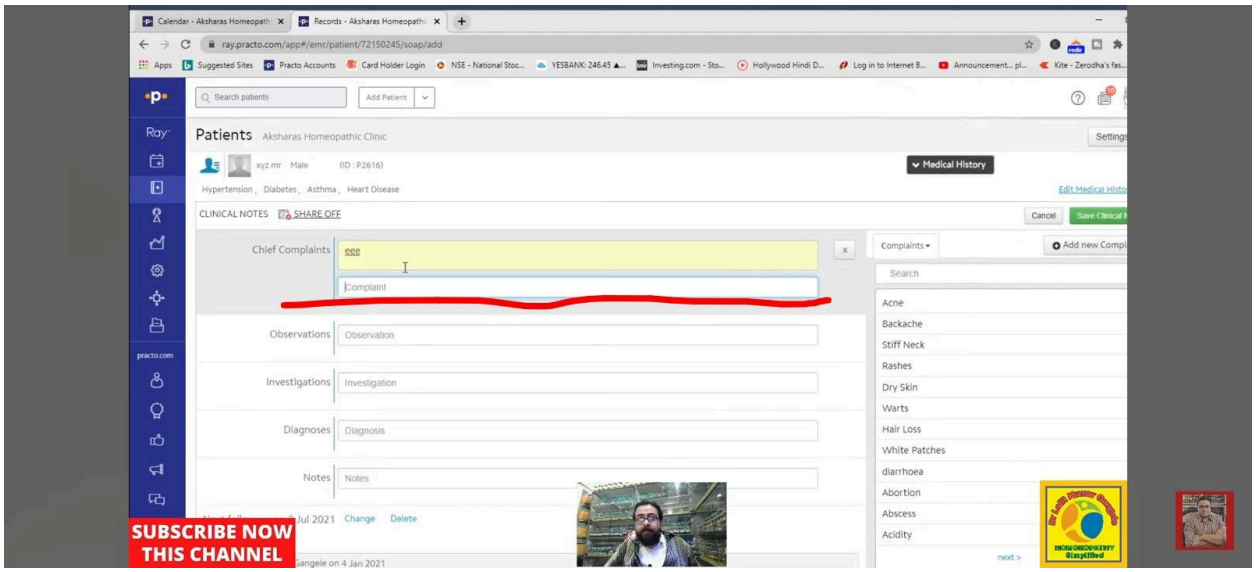

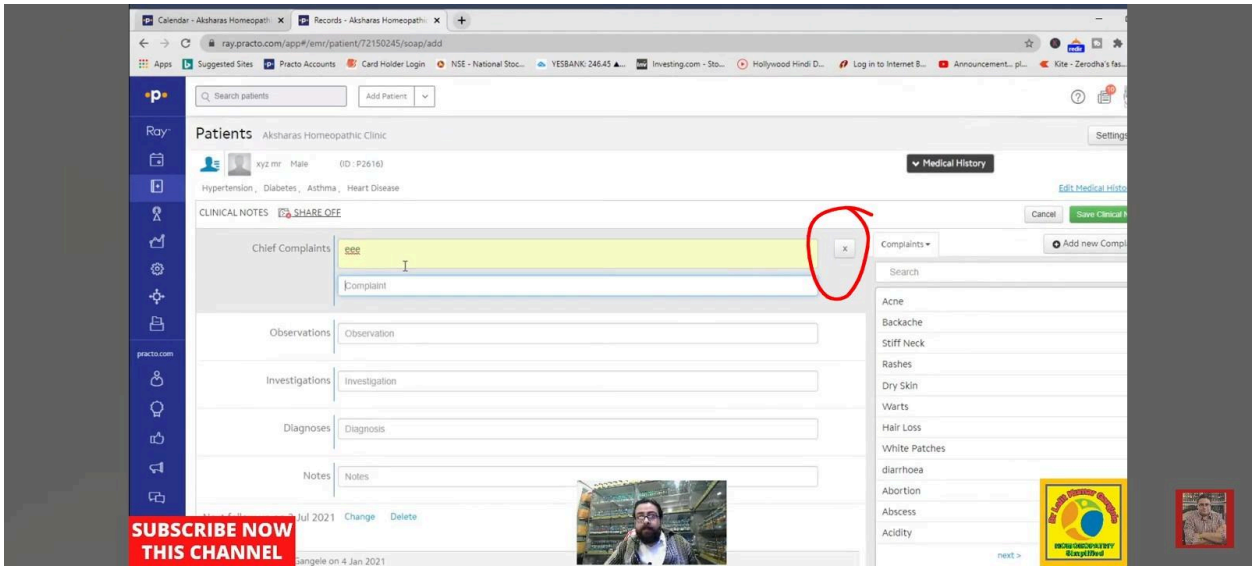

The form collapses into a Table/Chart visualization for longitudinal tracking. Includes Edit/Delete permissions.

II. Clinical Note Module

Structure: A structured four-part input: (1) Complaints, (2) Observation, (3) Diagnosis, (4) General Notes.

Sync Logic: Focusing on "Complaints" triggers the Right Box symptom checklist. Selecting items auto-appends text into the clinical note, reducing manual typing.

III. Prescription Module

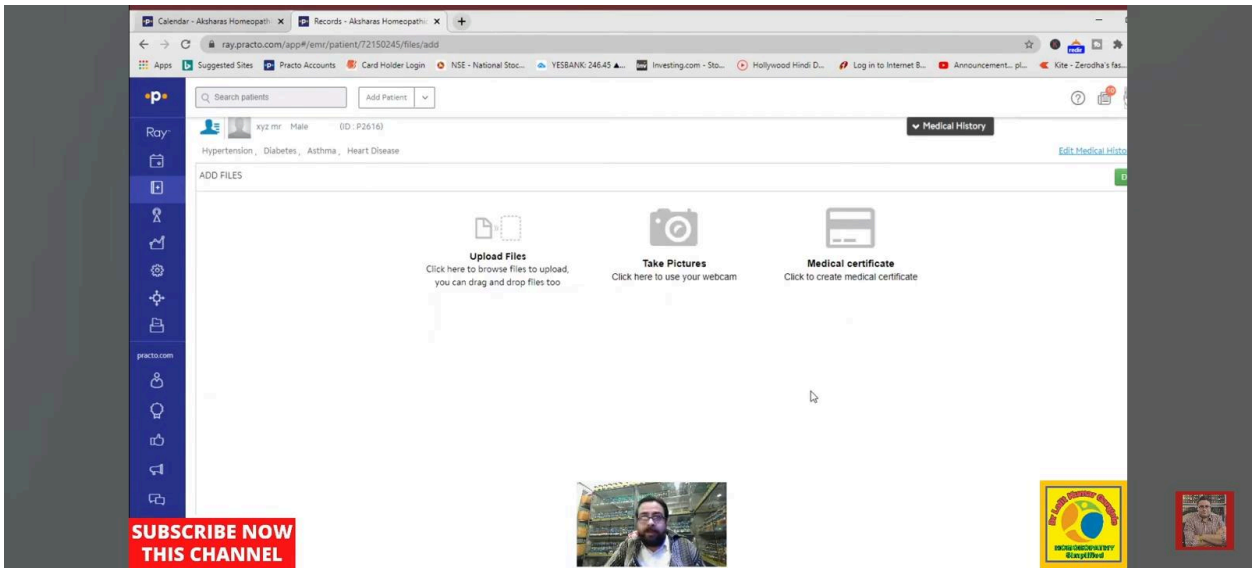

Medication Grid: Capture Name, Strength, Duration, Dosage (Morning/Noon/Night), and Meal Relation.

Dynamic Rows: A "Smart Grid" generates new empty rows automatically as the previous ones are completed.

Diagnostic Orders: Dedicated sub-section for Test Name and specific instructions/positioning.

IV. Multimedia & File Module

Acquisition: Supports uploads via Gallery (File System) or direct Camera integration.

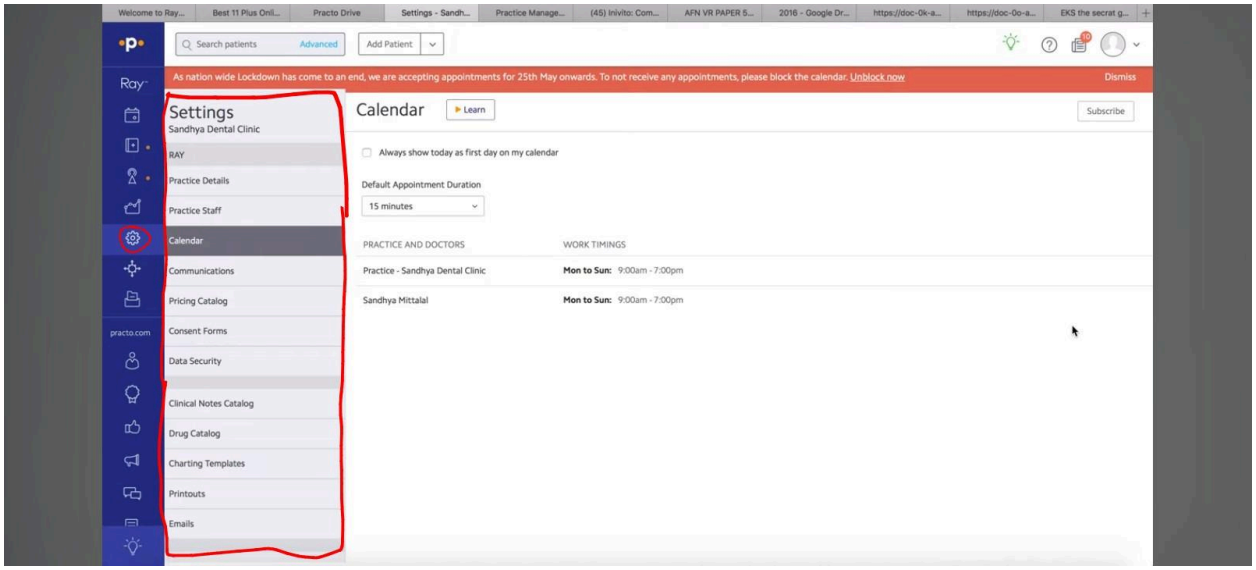

Indexing: Users must define the Date and File Category (e.g., Lab Report, External Prescription) before final commit.

General UI Governance

State Management: Every inline form must include explicit Save and Cancel triggers.

Context Preservation: No action within the Middle Box should cause a full-page reload or loss of the current scroll position.

Settings

Settings Module

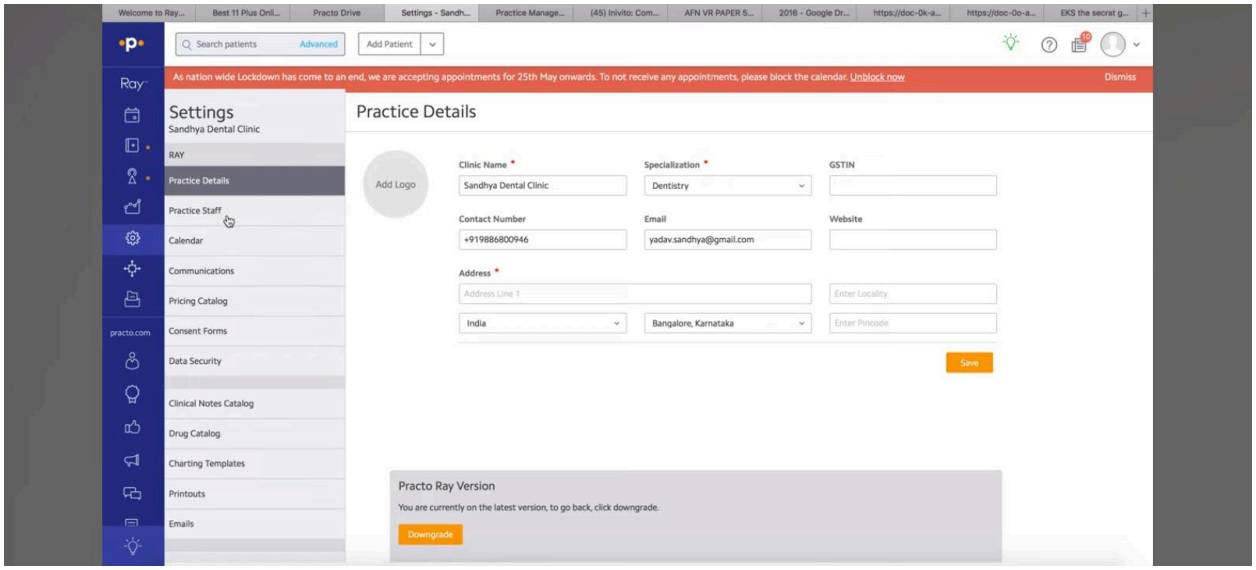

Upon selecting the "Settings" option, the system shall open a secondary navigation bar (sidebar) containing the following sub-modules. The user must be able to navigate through these options to manage system configurations.

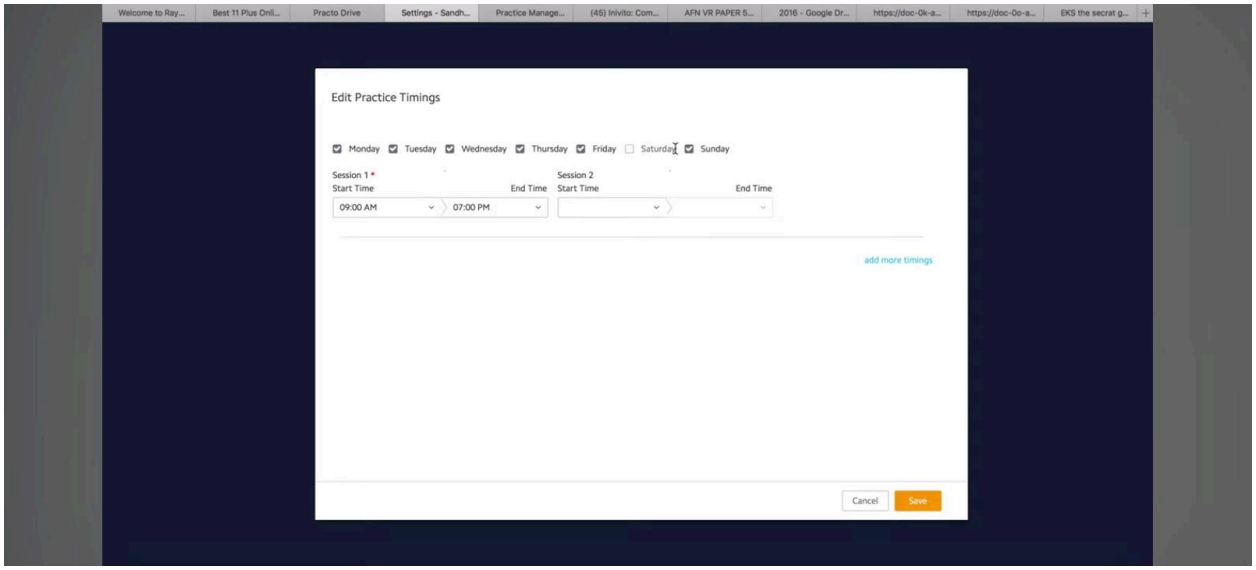

- Premium: Manage subscription plans and premium features.
- Practice Details: Manage clinic/practice name, logo, contact information, and physical address.
- Practice Staff: Add, remove, or manage staff access and roles.
- Calendar: Configure calendar intervals, working hours, and holidays.
- Communication: Manage SMS, email notifications, and automated reminders.
- Pricing Catalog: Set up and edit service charges or consultation fees.
- Consent Form: Customize and manage digital consent forms for patients.
- Data Security: Configure password policies, two-factor authentication, and data privacy settings.
- Clinical Note Catalog: Create and manage templates for clinical notes.
- Drug Catalog: Manage the database of medicines and prescriptions.
- Charting Template: Customize dental or clinical charts for patient records.
- Printouts: Configure templates for printed prescriptions and invoices.
- Email: Setup and manage professional email integration.

Practice Details

The system allows the doctor to maintain multiple clinic profiles. Each profile serves as a "Digital Identity" for that specific location, appearing on prescriptions, SMS alerts, and patient portals.

Core Profile Fields

- Clinic Logo: An image upload feature (supporting PNG/JPG). This logo will be dynamically pulled and placed on the Header of all prescriptions generated for this specific clinic.
- Clinic Name (*): A mandatory text field.
- Specialization: A dropdown or search-suggest field (e.g., General Practice, Pediatrics, Dermatology) to categorize the clinic's focus.
- Contact Number: A mandatory numeric field for patients to call for appointments or queries.
- Address: A multi-line text field for the physical location of the clinic.
- Google Maps Link: An input field to paste the clinic's "Share Link" from Google Maps.
- Utility: This link will be embedded in the Appointment Confirmation SMS to help patients navigate to the clinic.

Edit chamber(clinic) Practice Time

In addition to the core profile fields, the system shall include a "Practice Time" configuration section. This allows the doctor to define exactly when they are available at this specific clinic.

Weekly Session Configuration

Day Selection:

The interface shall display all seven days of the week with a Checkbox next to each.

Session Activation: Ticking a day's checkbox marks it as an "Active Practice Day."

Session-Wise Entry:

For every active day, the doctor can add one or more sessions (e.g., Morning Session, Evening Session).

- Start Time: A time-picker field for the beginning of the shift.
- End Time: A time-picker field for the conclusion of the shift.

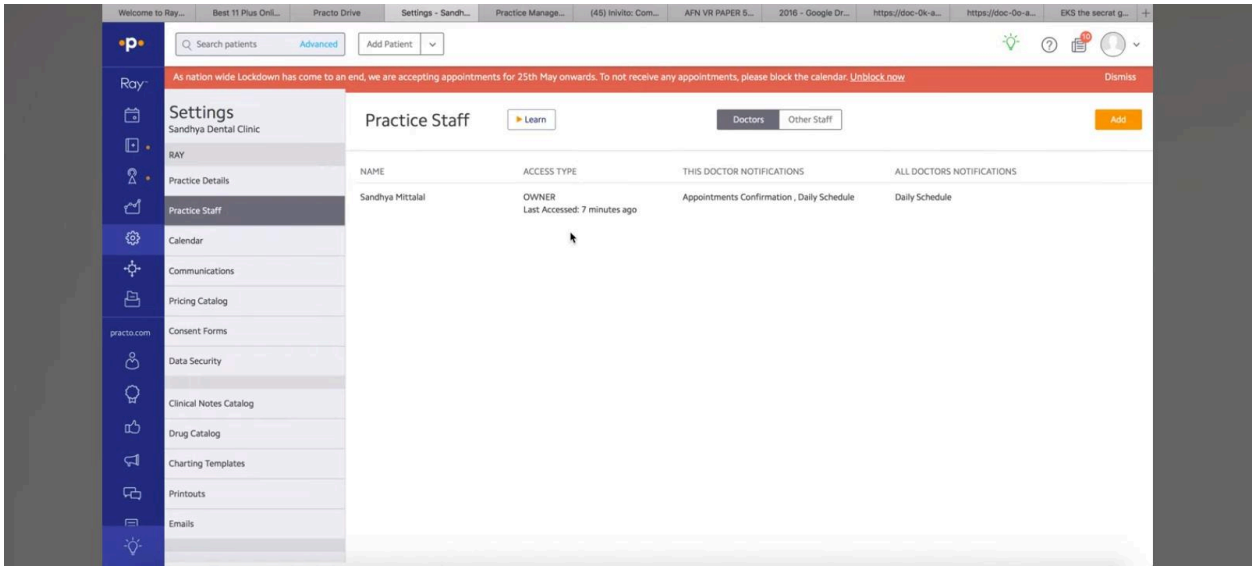

Edit Practice Time: The doctor can return to this profile at any time to modify these hours.

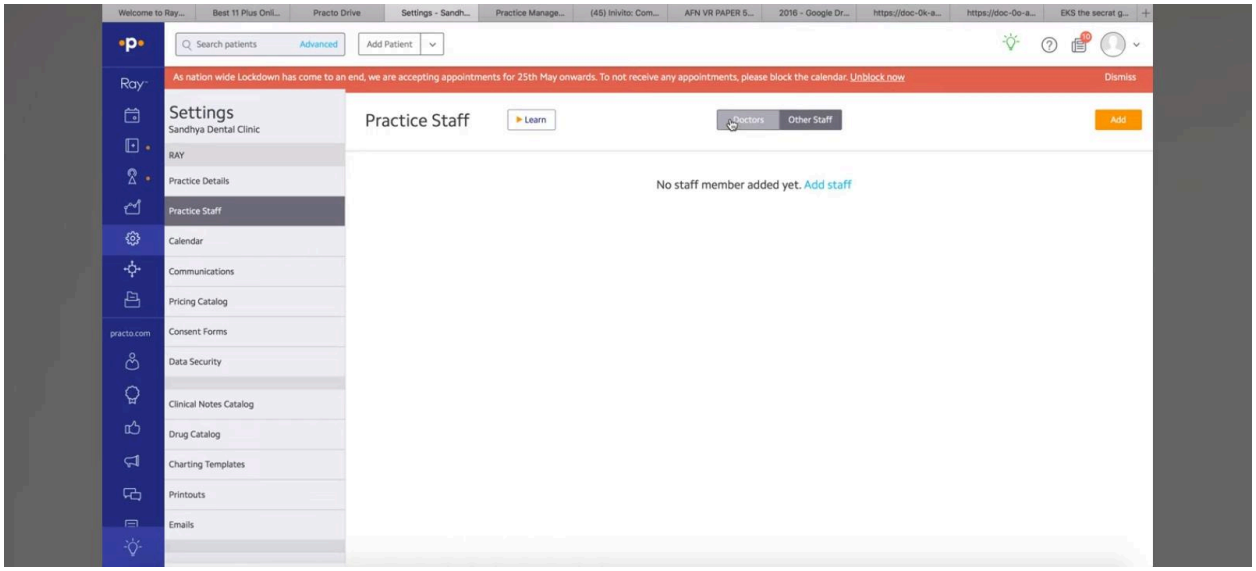

Dynamic Updates: Upon saving changes to the Practice Time, the Infinite Scroll Calendar will instantly reflect the new availability, adding or removing slots as per the updated session times.

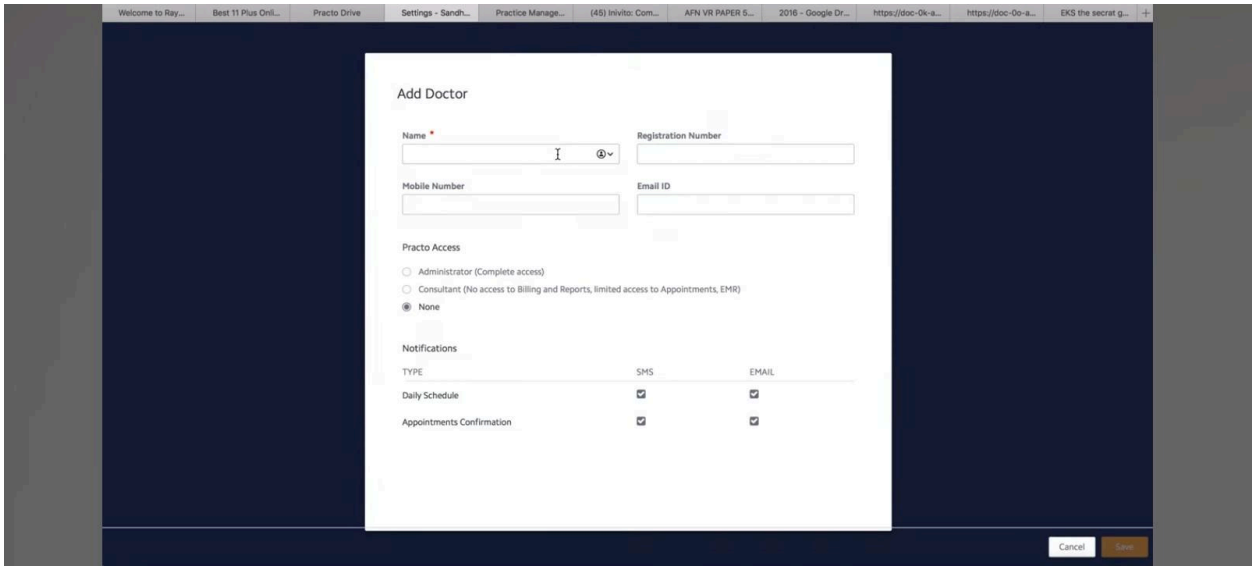

Validation: The system must ensure that End Time is always later than Start Time and prevent overlapping sessions within the same clinic profile.

Practice Staff

The system serves as a multi-user environment where the primary Doctor acts as the "Super Admin." This module enables the onboarding of Assistant Doctors and Support Staff with granular role-based permissions to ensure delegated tasks do not compromise sensitive patient data.

Categorized View: Distinct heading buttons—"Doctor" and "Staff"—allow the user to toggle between medical and administrative personnel lists.

The Registration Trigger: A prominent "Add" button launches a dedicated registration form for new members. Also Add More button.

Onboarding Assistant Doctors

When adding medical personnel, the following fields and settings are required:

Basic Info: Name, BMDC Registration Number (Mandatory), Mobile Number, and Email ID.

Access Control (Role Selection):

- Administrator: Complete system access (Settings, Stats, Staff Management).
- Consultant: Restricted access (Focus on Patient Records and Prescription writing).
- None: Profile saved for records only; no system login permitted.

Notifications:

- Types: Daily Schedule summary or real-time Appointment Confirmations.
- Channels: Delivery via SMS, Email, or both.

Onboarding Other Staff

For administrative personnel, the system collects:

Basic Info: Name, Mobile Number, and Email ID.

Role & Access Level:

- Administrator: Full system access.
- Receptionist: Access to Appointments, Live Queue, and Patient Intake.
- Front Desk: Limited read-only access to schedules.
- None: No system access.

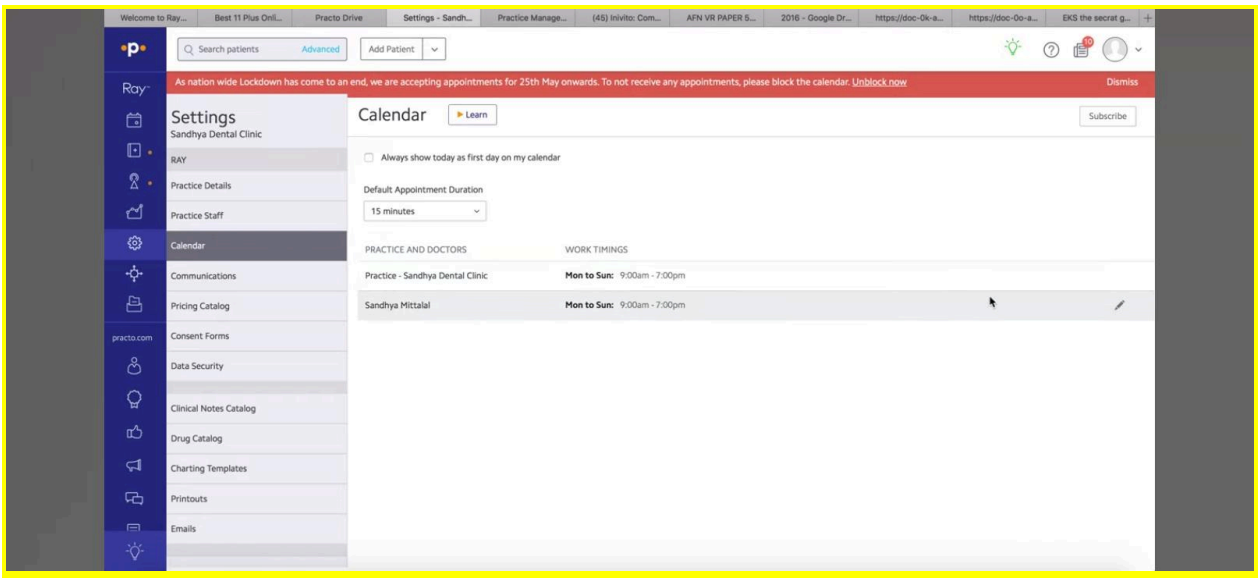

Notification Preferences: Toggleable alerts for the Daily Schedule via SMS or Email.

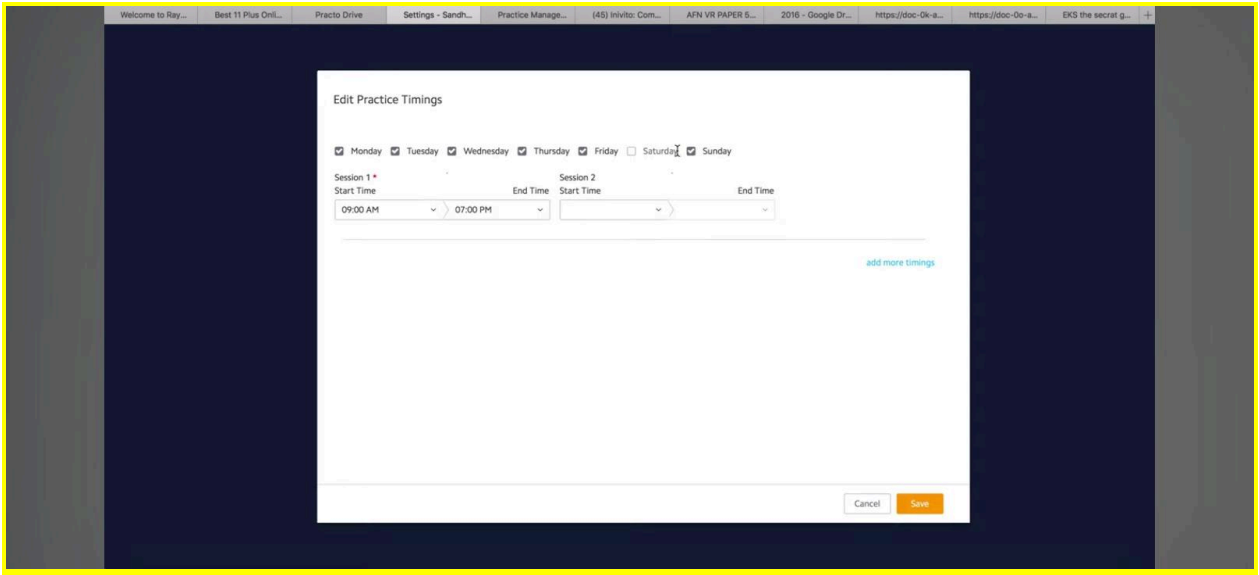

Instant Access Control & Security (The "Kill-Switch")

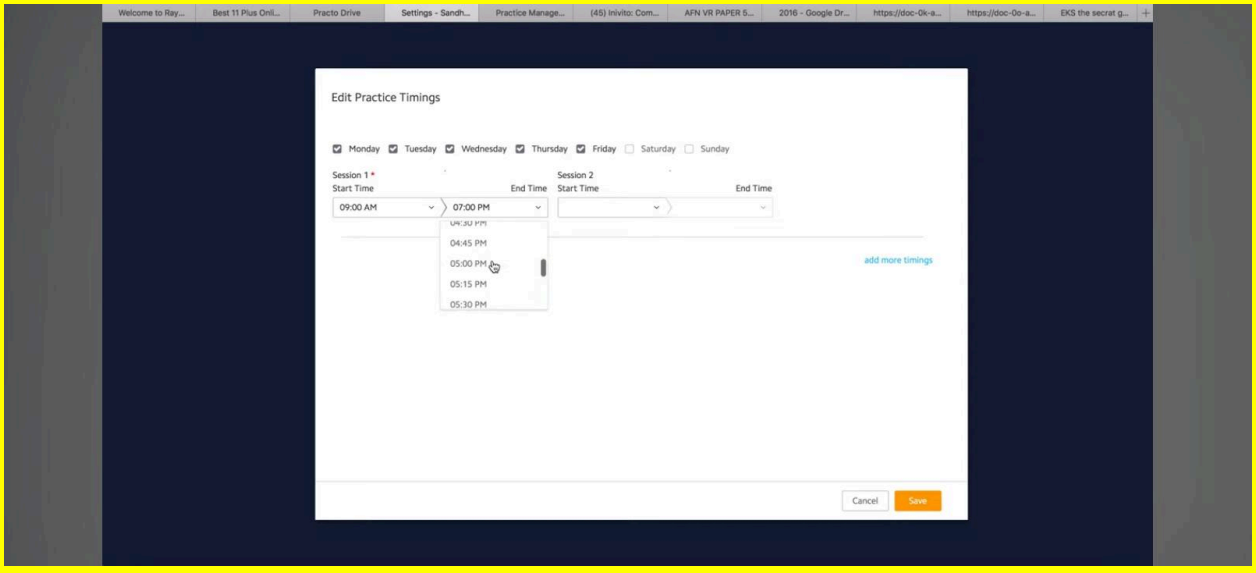

The primary Doctor retains the power to manage system entry in real-time to protect practice integrity.

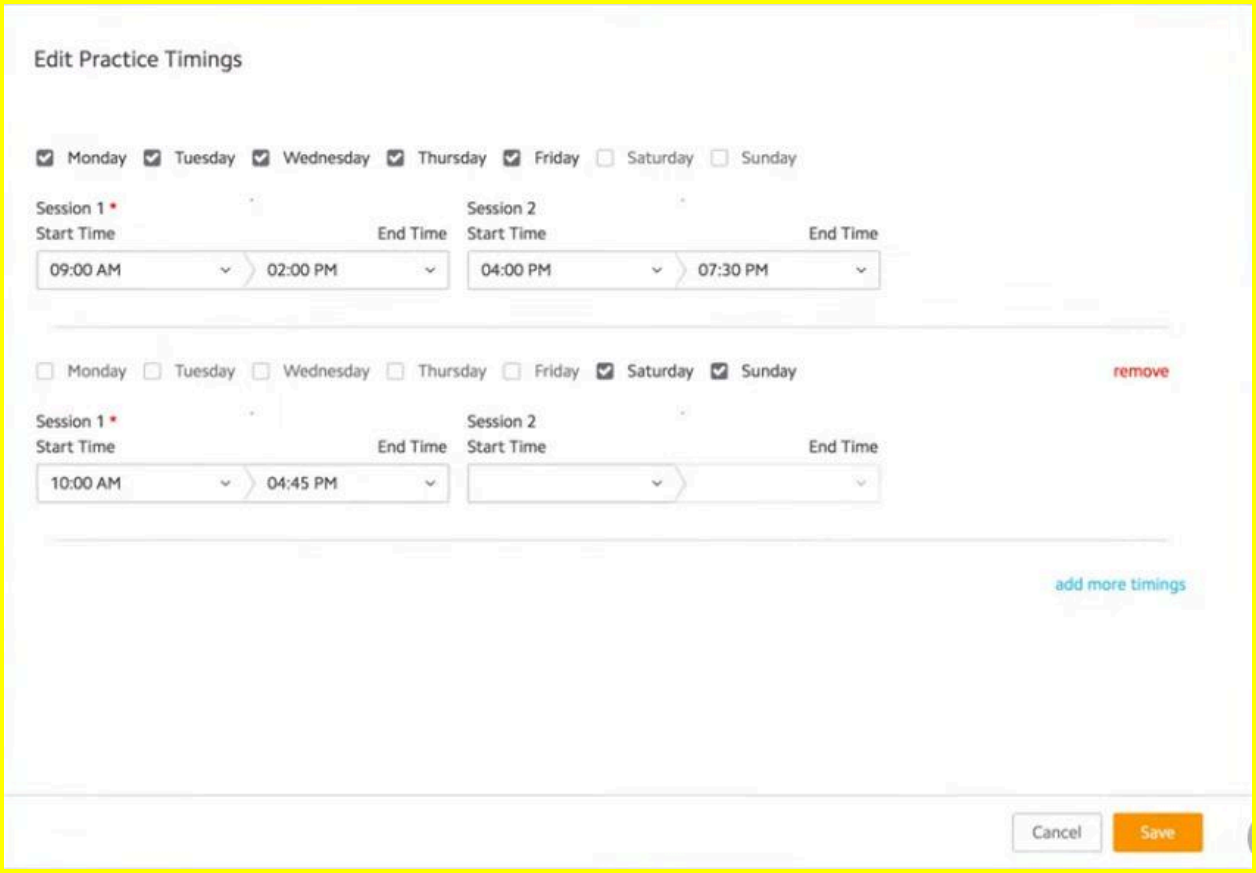

- Access Revocation (Instant Deactivation):
  The Doctor can toggle any staff member's status to "Inactive" at any moment.The system triggers an Instant Force-Logout. The staff member's active session is terminated, and they are immediately redirected to the login screen. Their credentials will be blocked from further entry.
- Reactivation via Verification:
  The Doctor may restore access to a suspended account by switching the status back to "Active

Calendar Settings

6.6.c.1.4.1 Calendar Display Defaults

• First Day View: The system shall provide a checkbox option to "Always show Today as the first day" on the calendar.

• Default State: This checkbox shall be selected (clicked) by default to ensure the current date is always prioritized in the view.

6.6.c.1.4.2 Appointment Configuration

• Duration Management: The doctor shall have the ability to set the duration for each appointment.

• Default Duration: The system must set the default appointment time to 10 minutes. However, the user shall be able to customize this duration as needed.

6.6.c.1.4.3 Practice & Slot Integration

• Automated Sync: The calendar shall automatically pull clinic information and available sessions from the "Practice Details" section.

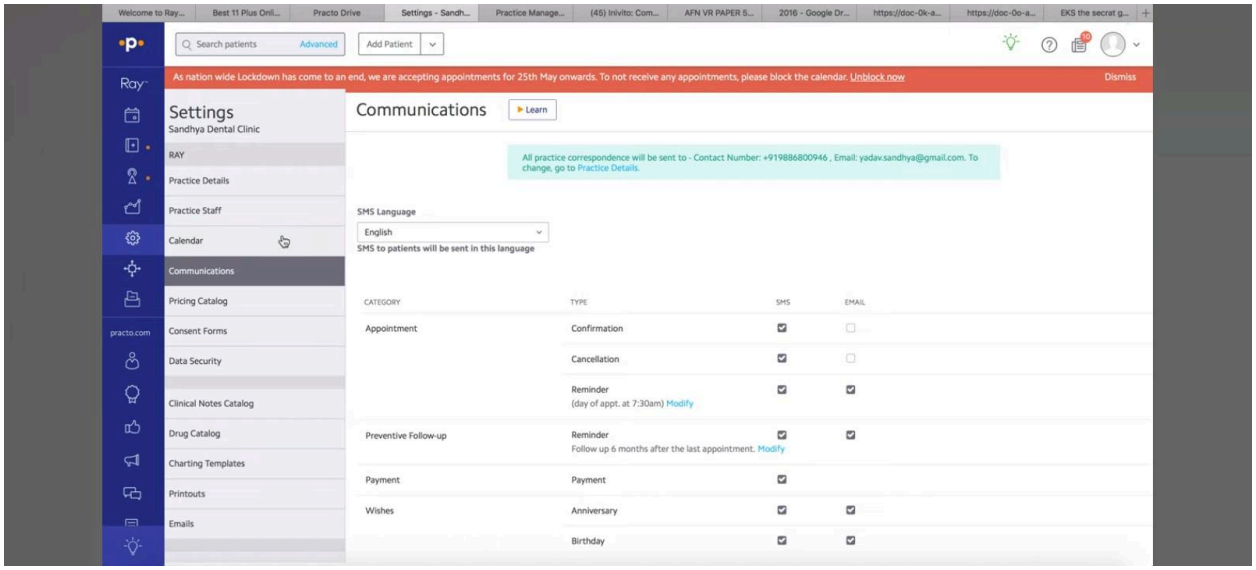

• Editability: The system must provide an "Edit" option within the calendar settings to allow quick modifications to practicing slots or clinic-specific timing.

6.6.c.1.4.4 Off-Day & Leave Management

• Custom Off-Days: The system shall allow the doctor to select any future date from the calendar and mark it as an "Off-Day."

• Exception Logic: When a date is marked as an off-day, the system must override the regular schedule and disable all appointment durations/slots for that specific day.

Communication

Communications

Identity Configuration

The system shall display the communication identity in the Header or Settings area.

Sender Info: The doctor must be able to see which Mobile Number (for SMS) and Email ID (for Emails) are being used by the system to send messages.

Fixed Identity: These identities shall be fixed or pre-configured so the doctor is always aware of the source of patient communications.

Language Settings

SMS Language: The system shall provide an option to select the language for outgoing SMS.Default: The language must be set to English by default.

Automated Notification Table

The system shall feature a table or a dashboard categorized into different notification types. The doctor shall have the ability to toggle SMS or Email for each of the following categories:

Category vs type

A. Appointments
  A.a. Confirmation,
  A.b. Cancellation
  A.c. Reminder

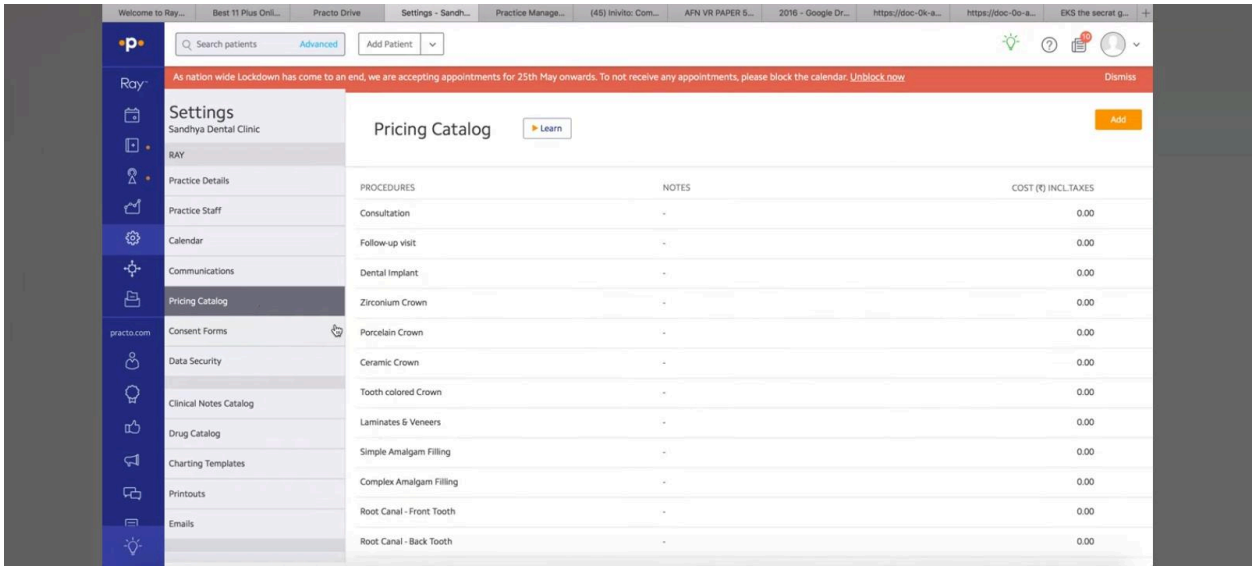

B. Preventive Follow-up reminder
  B.a. Reminder(follow up 6 month after the appointment)

C. Payment
  C.a. invoices

D. Wishes
  D.a. Birthday
  D.b. Anniversary

Dual-Channel Toggle: Every sub-category must have two separate toggle switches—one for SMS and one for Email. This allows the doctor to send, for example, Invoices only via Email but Appointment Confirmations via both.
Follow-up Trigger: For Category B.a, the system must run a daily background cron job to identify patients who had an appointment exactly (180/14/90) days (6 months) ago and send the reminder if toggled ON.
Wish Automation: For Category D, the system shall scan the Date of Birth and Anniversary fields in the Patient Profiles daily and trigger messages at a pre-set time (e.g., 10:00 AM).
Variable Placeholders: SMS/Email templates must support dynamic variables like [Patient Name], [Clinic Name], and [Appt Date].

Pricing Catalog

Pricing Catalog

Default Treatment List

The system shall provide a pre-defined list of standard medical services. The doctor can set specific pricing and clinical notes for each of the following default categories:

- Consultation: Fee for standard physical or in-person clinic visits.
- Consultation by Video Call: Fee for telemedicine or remote consultations.
- Follow-up Visit: A modified fee for patients returning for check-ups within a specific timeframe.

Specialized Procedures: Common clinical treatments (e.g., Root Canal, Scaling, Dressing, etc.) depending on the doctor's specialization.

To ensure the system scales with the unique needs of different specialties, the doctor must have total flexibility:

Add Custom Treatment: A feature to create new medical services or specific procedures not found in the default list.

- Price Configuration: For every entry (default or custom), the system shall provide a mandatory field to define the cost.
- Each pricing entry shall include an optional text field for Notes.These notes can be used for internal instructions or patient-facing descriptions that appear on the final invoice.
- The catalog section must feature a clean Table View.
- Required Columns: Treatment Name, Price, and Notes.
- Actions: Include "Edit" and "Delete" icons for each row.
- Billing & Invoicing Integration:
- Database Sync: These data points must be globally accessible by the Billing/Invoicing module.
- Auto-Populate Logic: When the doctor is writing a prescription or generating an invoice, they should be able to select a treatment from a search-suggest

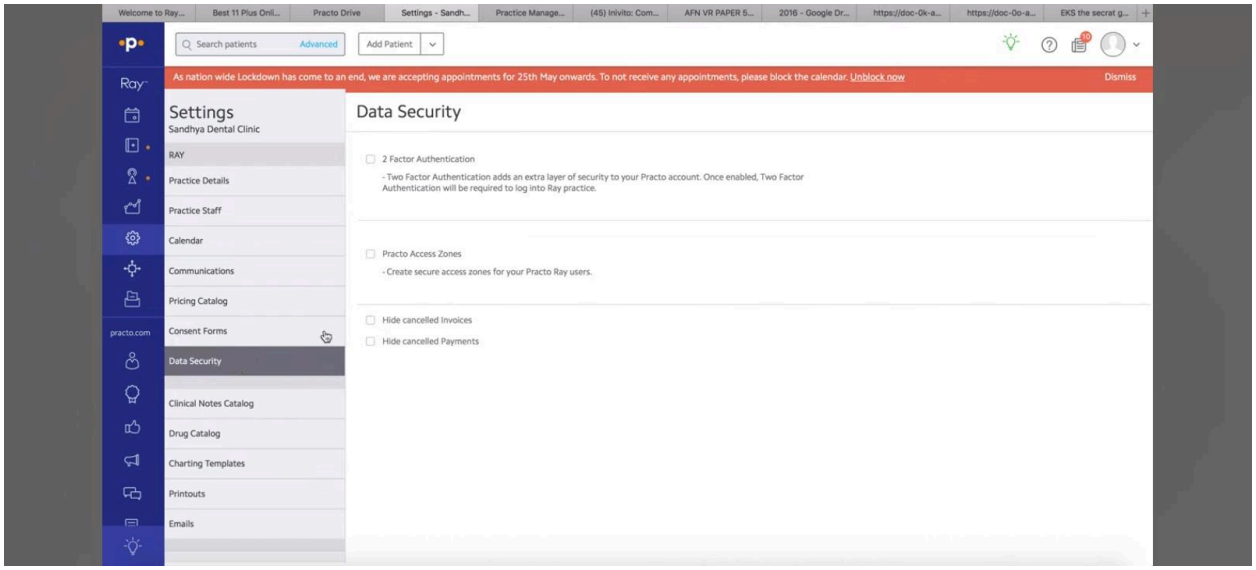

dropdown. Upon selection, the system must automatically pull the pre-configured price, minimizing manual entry and errors.

- Search & Filter: The UI should include a search bar at the top of the table to allow the doctor to quickly manage a large catalog of services.

Consent Form

Update to premium

Data Security

Data Security

Two-Factor Authentication (2FA)

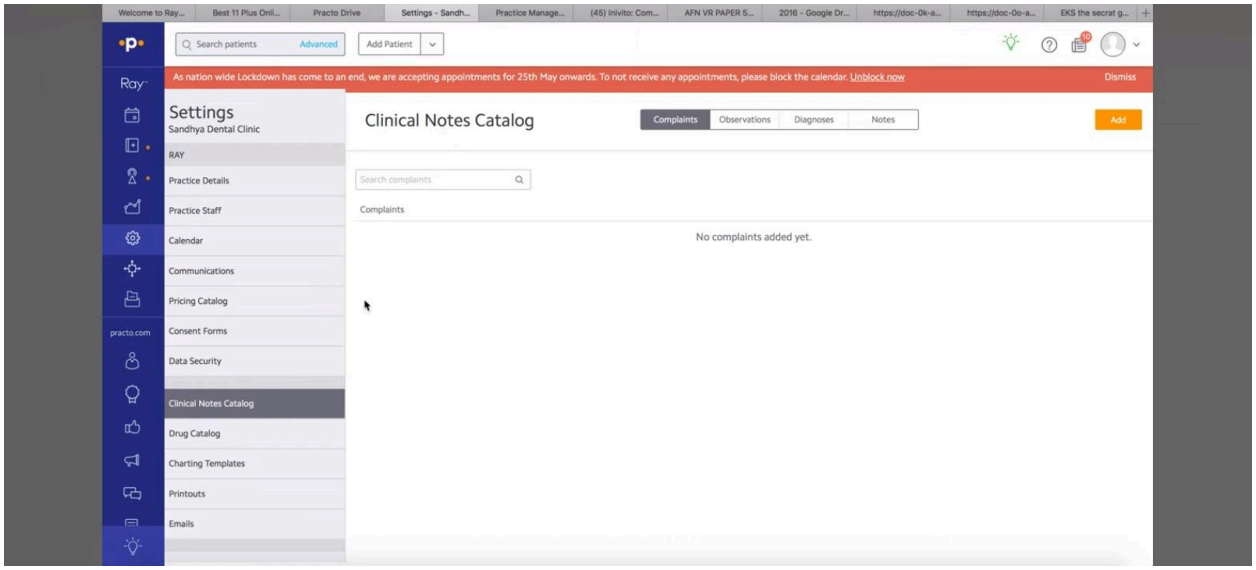

To prevent unauthorized access even in the event of password theft, the system shall implement 2FA as an optional but highly recommended security layer.

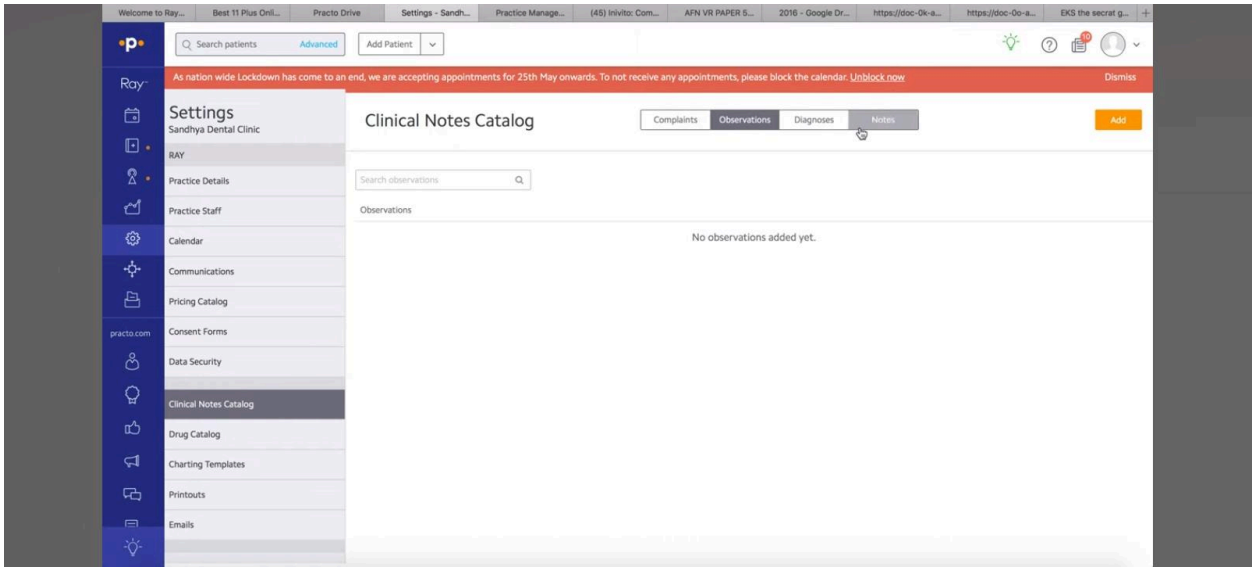

- Activation: The doctor can enable/disable 2FA from the Security Settings.
- Verification Methods: SMS/Email OTP: A 6-digit One-Time Password sent to the registered mobile number or email.
- Trigger Events: 2FA shall be required during Login from a new/unrecognized device.
- • Modifying sensitive "Practice Staff" access levels.

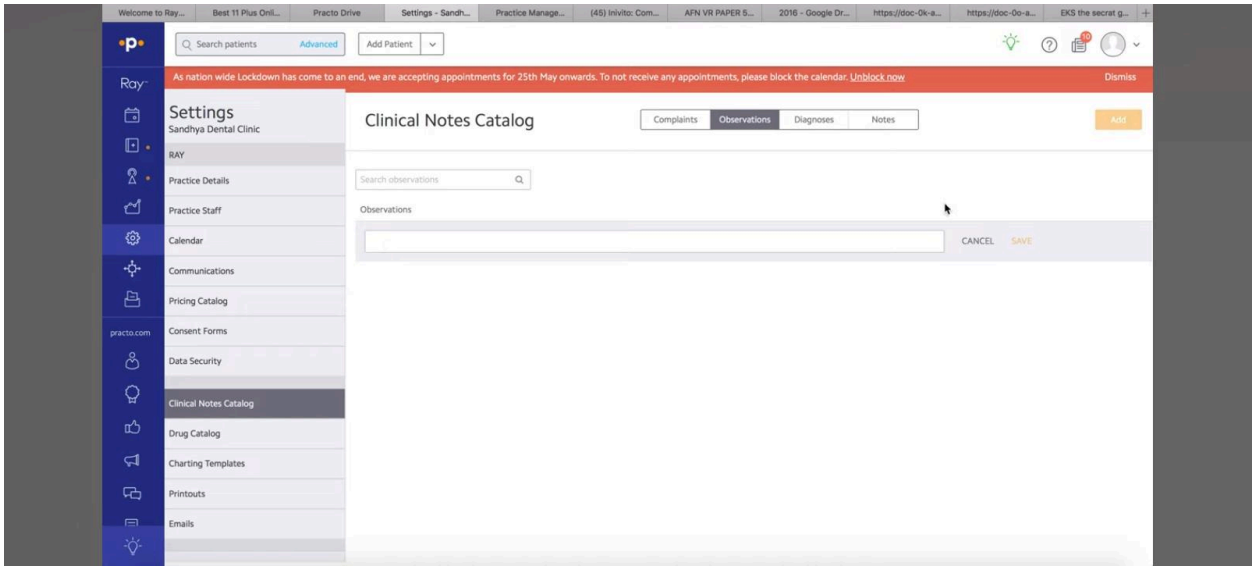

Password change

The system shall provide a secure workflow for updating and maintaining strong account credentials.

Clinical Notes Management (Catalog)

Navigation & Interface Structure

- Category Heading Buttons: At the top of the screen, there will be five distinct, large buttons: [Complaints], [Observation], [Diagnosis], [Advise], and [Notes].
- Active State Logic: Similar to the Doctor/Staff toggle, the currently selected clinical category will be visually highlighted (Active State) so the doctor always knows which catalog they are modifying.
- The "Add" Action: A prominent "Add" button will be positioned at the top right, mirroring the personnel registration trigger.

The Five Functional Categories

The management process is identical across all five segments:

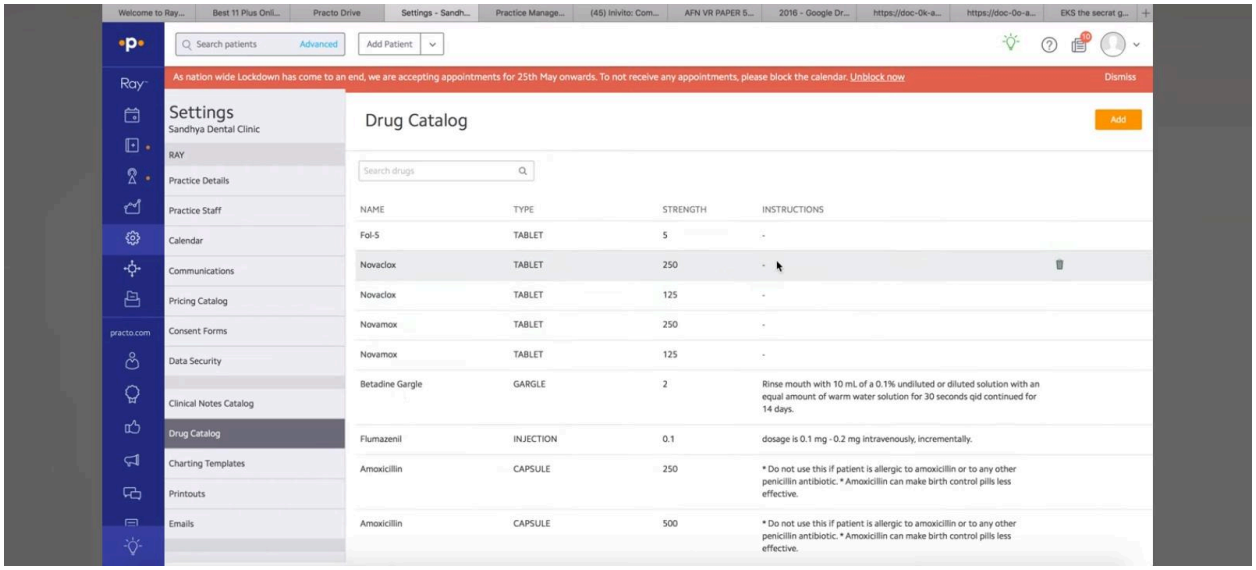

- Complaints: For managing a library of primary symptoms reported by patients.
- Observation: For recording physical examination findings and clinical signs.
- Diagnosis: For standardizing confirmed or provisional medical conditions.
- Advise: For building a list of common patient instructions (e.g., lifestyle, diet, or rest).
- Notes: For general clinical remarks or internal documentation.

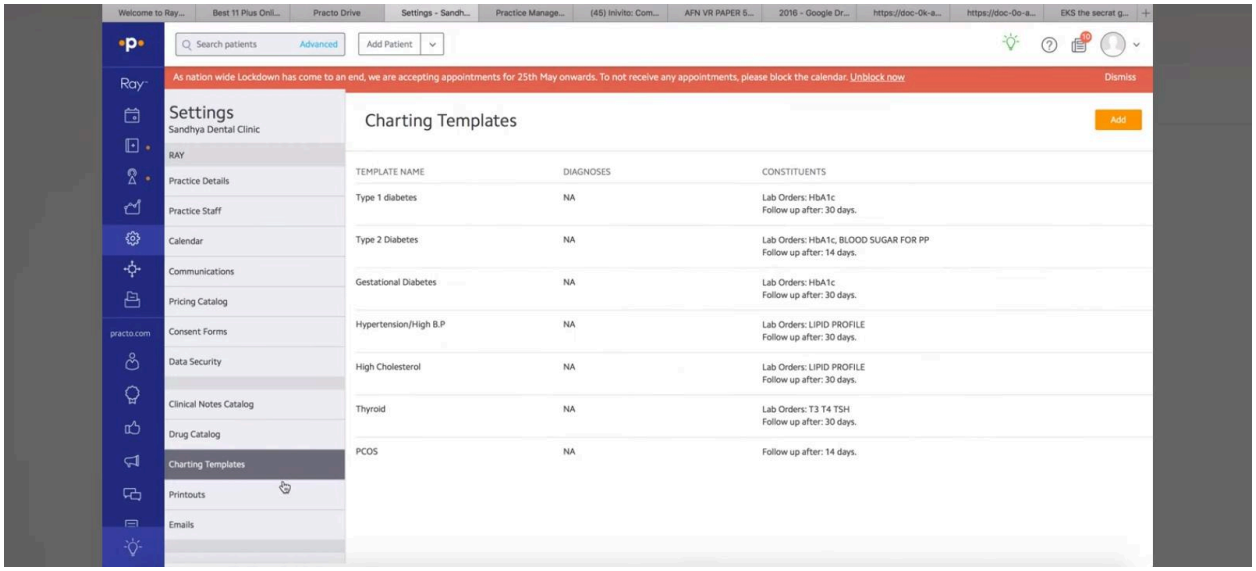

Add & Edit Workflow

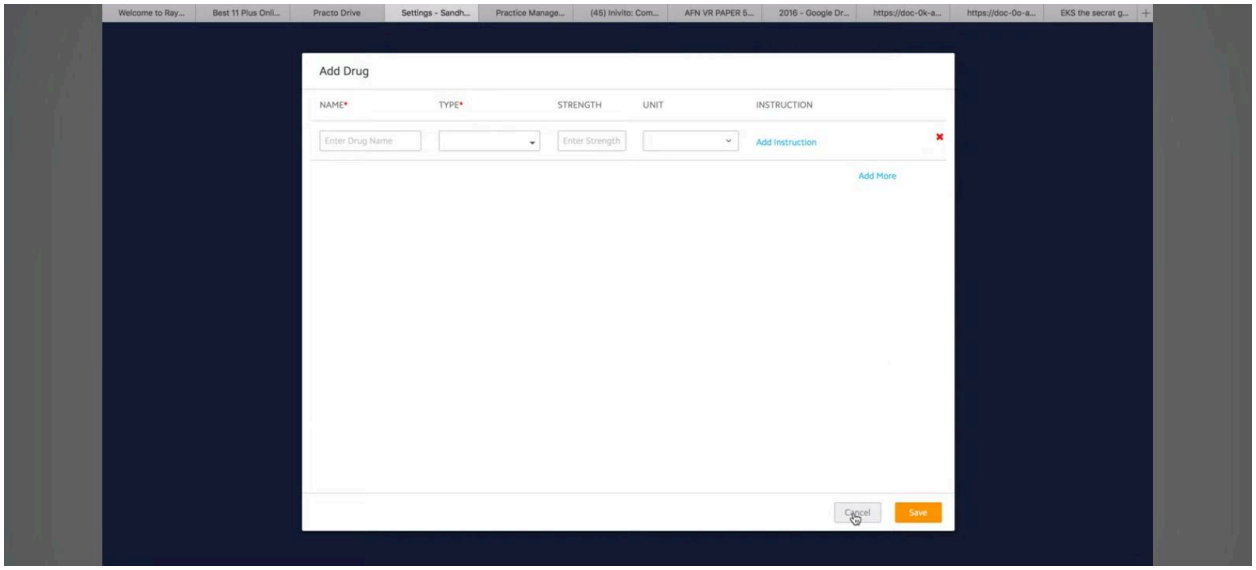

- Entry Process: Clicking "Add" opens an input field (Gap) within the list view. Once the note is typed and "Save" is clicked, it is committed to the database.
- Edit Functionality: Just like the Staff list, every individual note will feature an "Edit" icon on the right, allowing for instant updates or corrections.
- Live List View: Each category will display its entries in a clean, scrollable list or table format.
- Prescription Integration: These five catalogs serve as the "Auto-Suggest" engine for the Prescription Module. When the doctor types in a specific field (e.g., the

Diagnosis field) on a prescription, the system must pull suggestions only from the corresponding "Diagnosis" catalog.

Drug Catalog

Module Overview

The system shall feature a comprehensive Drug Catalog where doctors can register and manage their preferred medications for faster prescription writing.

Adding New Medications

Upon clicking the "Add Drug" button, a registration modal or form will open with the following fields:

- Name: Brand name or Generic name (e.g., Napa or Paracetamol).
- Type: A dropdown menu for the medication form (e.g., Tab, Cap, Syr, Inj, Drop, Ointment).
- Strength: The potency of the drug (e.g., 500mg, 5ml, 1gm).
- Unit: Measurement unit (e.g., mg, ml, mcg).
- Instruction: Default intake instructions (e.g., "1+0+1 After meal" or "Twice daily").

Workflow:

- Save: Commits the drug to the master catalog.
- Add More: Clears the form fields while keeping the modal open, allowing for high-speed, continuous data entry of multiple medications.

Search Functionality

- The module shall include a Drug Search Option.
- The doctor must be able to search for specific medications by Drug Name to view their details or check if they already exist in the catalog.

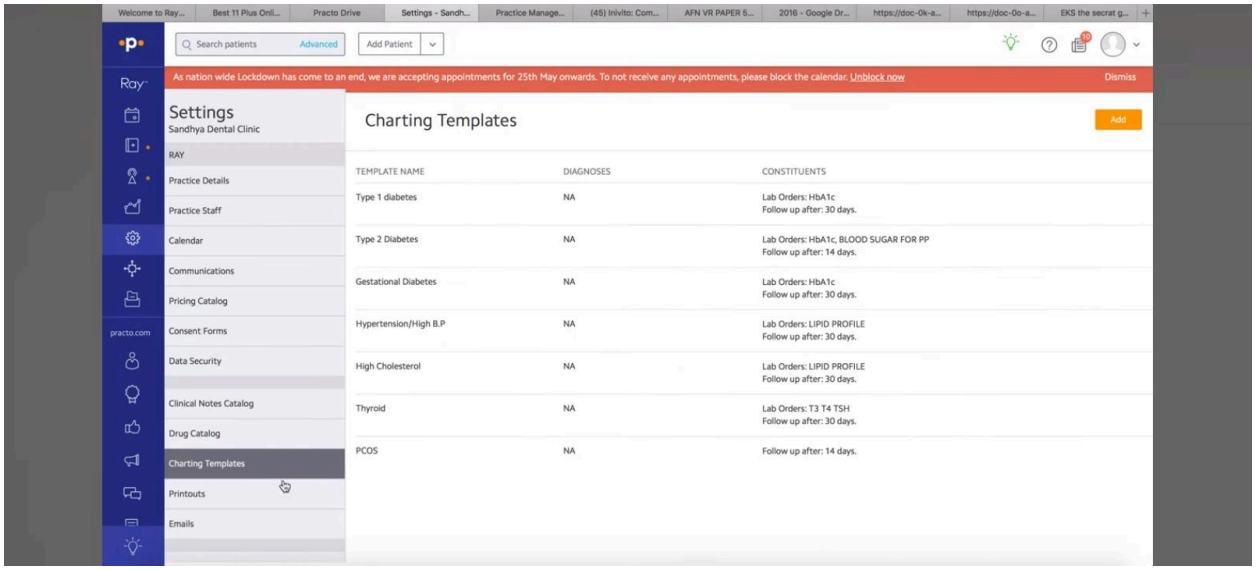

Catalog List & Management

The stored medications shall be displayed in a structured Table Format.

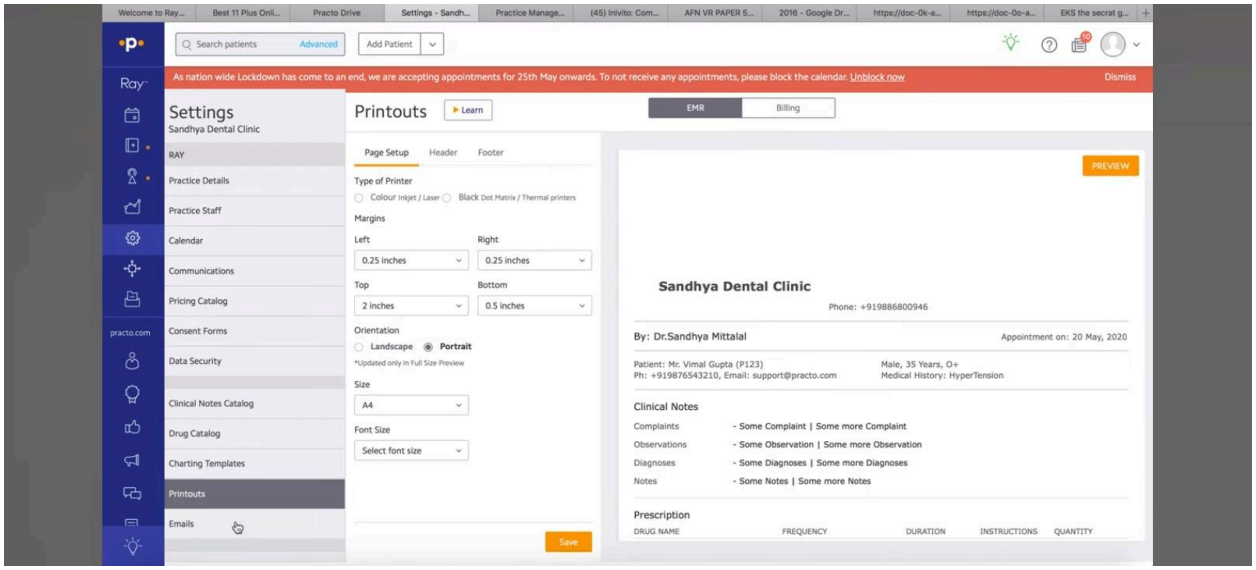

- Table Columns: The table must show the Name, Type, Strength, and Instruction for each drug.

- Management Options: Each entry in the list must feature two distinct actions on the right side:
- Edit: To modify existing drug information.
- Cancel/Delete: To remove a medication from the catalog.
- Auto-fill Logic: প্রেসক্রিপশন তৈরি করার সময় ডাক্তার যখন ওষুধের নাম টাইপ করবেন, এই ক্যাটালগ থেকে ডাটা নিয়ে সিস্টেম যাতে 'Suggestion' দেখায় তা নিশ্চিত করতে হবে।
- UI Consistency: ড্রাগ ক্যাটালগের টেবিল এবং সার্চ ইন্টারফেসটি যাতে Clinical Note Catalog-এর মতোই সামঞ্জস্যপূর্ণ হয়।

Printouts

Printouts (Page Setup Settings)

Printer Configuration

The system shall optimize the document rendering based on the doctor's specific hardware to ensure clarity and cost-efficiency:

- Colour: Optimized for inkjet or laser printers to produce high-quality, professional prescriptions with colored logos and headers.
- Black/Dot Matrix: Optimized for monochrome laser printers or impact (Dot Matrix) printers, focusing on high-contrast text and minimal graphics to ensure fast printing and ink preservation.

Design & Customization (Layout Builder)

The system provides maximum freedom for doctors to define the visual identity of their Prescriptions and Billing Invoices.

Template Library (Default Designs)

- Cura Default: A clean, professional, and ready-to-use digital layout.
- Multiple Pre-set Templates: The system shall offer a gallery of additional designs (e.g., Classic, Modern, Minimalist, Academic). The doctor can switch between these at any time to refresh the clinic's look.

Custom Pad Integration (Scan & Map)

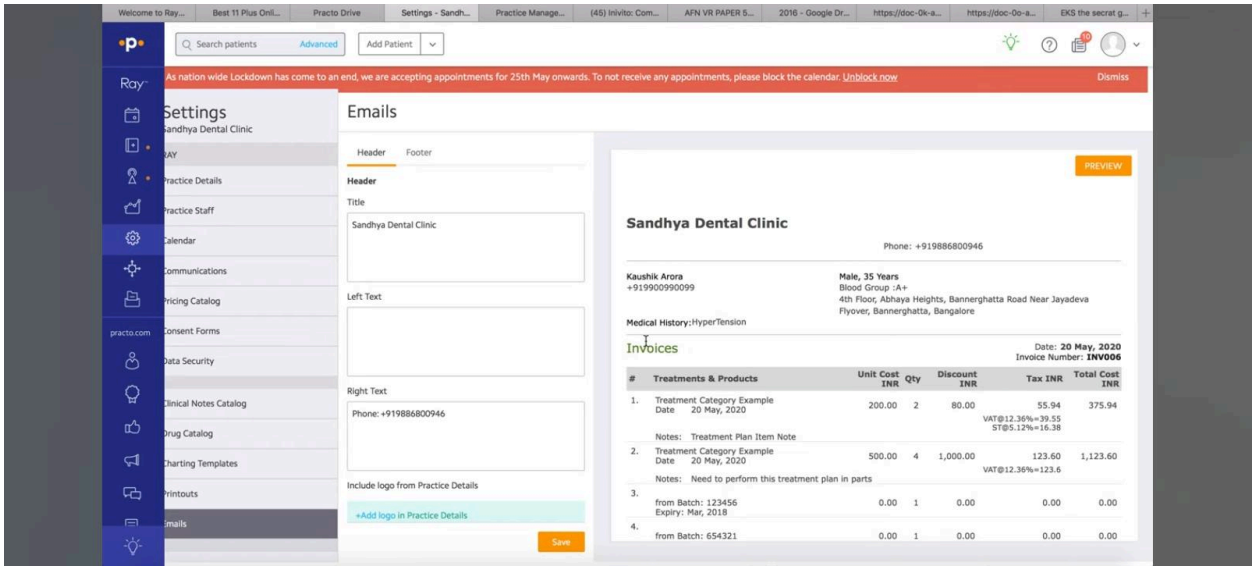

This is a high-utility feature for doctors who already have high-quality printed stationery or pads.

Scan & Upload: The doctor can scan their existing physical prescription pad and upload it as a high-resolution background image.

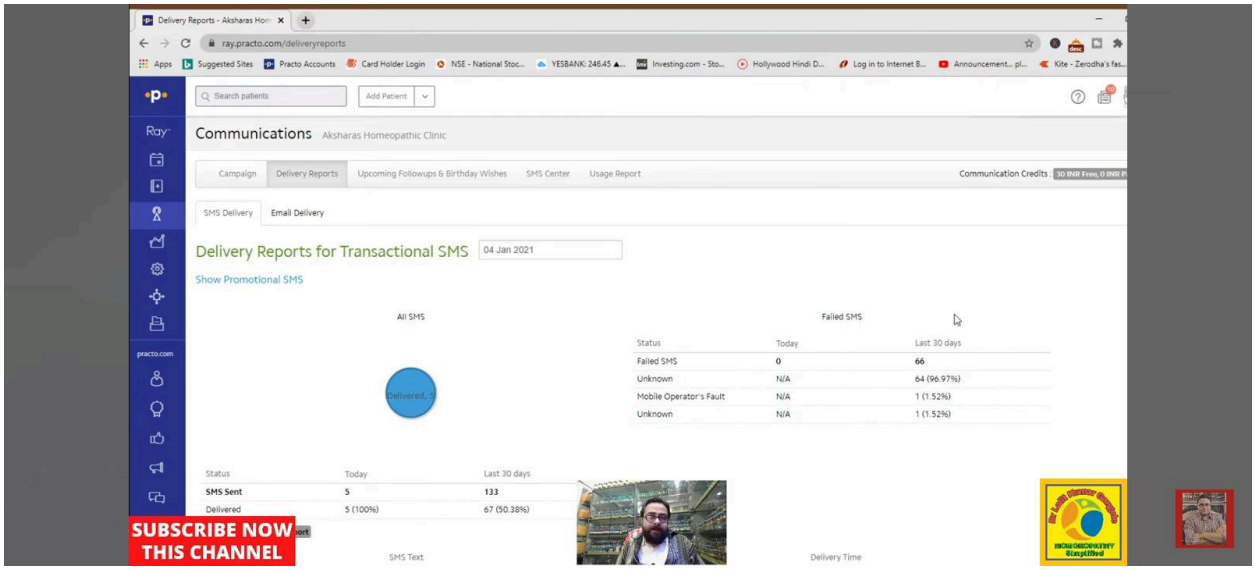

Dynamic Layout Mapping: The system allows the doctor to map exactly where the digital data (Patient Name, Date, Rx, Diagnosis) should be printed on the scanned image.

Header/Footer Bypass: If the physical pad already contains the clinic's logo, name, and address, the doctor can disable the "System Header/Footer." This ensures the printer only fills in the clinical data in the designated empty spaces of the pad
Header/Footer Toggle: Option to show or hide the clinic logo, address, and doctor's credentials.
Margin Settings: Adjustable top, bottom, and side margins to fit different paper sizes (e.g., A4, A5, or Letter).
Font Scaling: Ability to increase or decrease text size for better readability.
Component Arrangement: Drag-and-drop or checkbox options to decide where specific sections (e.g., Vitals, Diagnosis, Advise) appear on the page.

Profile Management

Profile

To provide a centralized gateway for managing and updating a patient's administrative and demographic records.

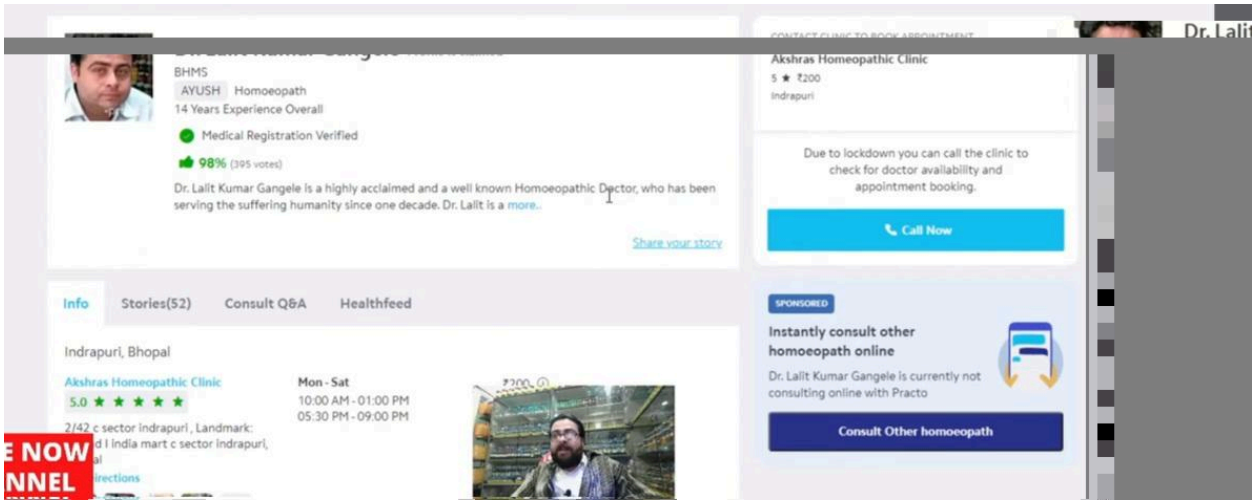

Navigation:

Clicking on "Profile Management" or "Edit Profile" triggers an immediate route to the Account Creation/Registration Page.

Information Update:

This interface allows authorized users to modify existing account details—such as contact information, address, and demographic data—or append new records to the profile.
