Cura — Doctor Practice Management Platform

Development Budget & Costing Plan (BDT)

Source document: Cura draft 5.pdf (155 pages)
Scope: Web application (React) + Mobile application (React Native, iOS & Android) + shared backend
Prepared: August 2026

> **Basis of this estimate:** covers **hands-on development only** — backend, web frontend and React Native — plus domain, store accounts and first-year hosting.
>
> **Not included:** UI/UX design, QA/testing, DevOps/infrastructure management, project management, and contingency for scope change. These remain the client's responsibility. Hours assume finished designs, stable requirements and no rework cycles.

---

1. Executive Summary

Item	Hours	Cost (৳)
Backend, Dashboard & APIs	1,134	1,70,100
Web Application (React)	619	1,54,800
Mobile Application (React Native)	714	1,78,500
Domain & SSL — ≈ $27	—	3,300
App Store + Play Store accounts — ≈ $125	—	15,300
Cloud hosting, Launch tier — ≈ $250/yr	—	30,500
Total	**2,467**	**৳5,52,500**

USD converted at ৳122/USD. Apple ($99/yr, recurring), Google Play ($25 one-time) and most cloud providers bill in USD — those three lines require an international card or corporate USD card.

Excludes other third-party running costs of approximately ৳2,51,000 in year one — SMS gateway registration & volume, transactional email, payment gateway setup, error monitoring, backups, Facebook Login review and a pre-launch security audit. ***Year-one all-in including those: ৳8,03,500.***

---

2. Backend, Dashboard & APIs

(Shared by both web and mobile; single source of truth.)

#	Module	Spec ref	Hours	Cost (৳)
1	Project setup, repo scaffolding, coding standards	—	36	5,400
2	Auth: register, login, OTP/MFA, JWT + refresh, remember-me 30 days, forgot password, Facebook/social login	1.3.1, 1.3.2	72	10,800
3	4-step onboarding wizard APIs, draft auto-save, document upload	3.2.6	48	7,200

#	Module	Spec ref	Hours	Cost (৳)
4	Practice/chamber profiles, weekly practice timings, **slot generation engine**	Practice Details	60	9,000
5	Staff & assistant management, RBAC roles, instant kill-switch / force logout	Practice Staff	54	8,100
6	Patient CRUD, Cura ID generation, duplicate detection, family/shared-number linking	Patient Intake	54	8,100
7	Universal search — multi-parameter (phone/name/ID/email), indexing, live results	2.1.1	36	5,400
8	Appointment engine — booking, walk-in, reschedule/drag-drop, cancel, no-show, token/serial, off-day & block calendar	Sec. 2.3, Walk-in	78	11,700
9	Queue/status engine + WebSocket real-time counters (Waiting/Engaged/Done/Cancelled)	Status Summary	48	7,200
10	Clinical records — vitals, clinical notes (4-part), prescriptions, diagnostic orders	Patient Dashboard	84	12,600
11	File & multimedia storage, categorisation, indexing, secure URLs	IV. File Module	36	5,400
12	Catalogs — drug, clinical note (5 categories), pricing, charting templates	Settings	66	9,900
13	**Privacy-first layer** — 90-day window, patient consent unlock, full audit trail	Data Privacy	48	7,200
14	Notification centre, push tokens, per-user preferences, mute defaults	Notification Centre	42	6,300
15	SMS + Email gateway integration, templates, dynamic placeholders, delivery reports	Communications	60	9,000
16	Cron jobs — 6-month follow-up, birthday/anniversary wishes, appointment reminders	Communications	30	4,500
17	Printout/PDF engine — templates, custom-pad scan & coordinate mapping, header/footer bypass	Printouts	66	9,900
18	Reports & statistics — income, invoiced, per-doctor/procedure/group aggregations	Reports	54	8,100
19	Feedback, community feed, support desk (urgent / live chat / scheduled call)	Support & Guidance	66	9,900
20	Subscription/premium tiers + payment gateway integration	Premium	54	8,100

#	Module	Spec ref	Hours	Cost (৳)
21	Internal admin/support back-office (minimum viable)	Support	42	6,300
	Subtotal		**1,134**	**৳1,70,100**

---

3. Web Application (React)

#	Module	Hours	Cost (৳)
1	Setup, component library, routing, state mgmt, EN–BN i18n	43	10,800
2	Welcome page (split-screen), login, register, OTP, forgot password	25	6,300
3	4-step account creation wizard, stepper, validation gates, auto-save	36	9,000
4	Dashboard shell — header, collapsible sidebar (12 modules), sticky layout	40	9,900
5	**Calendar** — 4-pane layout, Day/3-Day/Week/Month grids, infinite vertical scroll, drag-and-drop reschedule, real-time line, mini block calendar, team directory	72	18,000
6	Appointment modals — Add appointment, Reminder, Block Calendar, Edit, Walk-in fast-track	40	9,900
7	Right contextual pane — patient snapshot, check-in / engage / no-show, live AJAX status	22	5,400
8	Universal search + as-you-type dropdown with profile preview	14	3,600
9	Notification centre, profile dropdown quick-toggles, help/support desk UI	25	6,300
10	Patient module — list, filters (Today/Recent/All), search, privacy gates & consent prompt	32	8,100
11	**Patient Dashboard SPA** — 4-box	79	19,800

#	Module	Hours	Cost (৳)
	architecture, clinical timeline, zero-redirect inline forms (vitals, clinical notes with symptom sync, prescription smart grid, files/camera)		
12	Settings module — 13 sub-screens (practice details, staff, calendar, communications, pricing, consent, security, catalogs, charting, printouts, emails, premium)	94	23,400
13	Reports & statistics with charts, filters, export/print	29	7,200
14	Communication reports, feedback management, community, profile management	32	8,100
15	Printout layout builder — template gallery, drag-drop component arrangement, live preview	36	9,000
	Subtotal	**619**	**৳1,54,800**

---

4. Mobile Application (React Native)

Covers **iOS + Android from one codebase**. Assumes the doctor/assistant app mirrors core clinical and scheduling workflows; heavy configuration screens (printout builder, charting templates) remain web-only.

#	Module	Hours	Cost (৳)
1	RN setup, navigation, shared UI components, offline cache, FCM/APNs push	84	21,000
2	Auth, OTP, onboarding wizard, native **camera document capture** (NID, certificates, signature)	78	19,500
3	Calendar — day/week/agenda views, appointment CRUD, walk-in fast-track, block calendar	120	30,000
4	Patient list, search, patient dashboard & clinical timeline	108	27,000
5	Clinical entry — vitals, clinical notes,	108	27,000

#	Module	Hours	Cost (৳)
	prescription writing (mobile-optimised)		
6	File upload / camera / digital signature capture	42	10,500
7	Notification centre + push handling + deep links	36	9,000
8	Settings — profile, practice timings, catalogs, communication toggles, staff access	78	19,500
9	Reports (lite)	24	6,000
10	Build config, code signing, store submission (App Store + Play), OTA update setup	36	9,000
	Subtotal	**714**	**৳1,78,500**

---

5. Explicitly Excluded from This Budget

Beyond the disciplines named in the basis note above (design, QA, DevOps, project management, contingency), the following appear in the source document but are either ambiguous, out of scope, or dependent on external parties:

Item	Spec ref	Reason / note
Patient-facing mobile app or portal	implied by consent OTP, patient SMS	Not specified in the document. Estimate separately: ~540–720 hrs (৳1,35,000–৳1,80,000).
Practo Integration	Sidebar item 8	Practo is an Indian platform with no public partner API for third parties. Requires a signed partnership before it can be scoped. Placeholder: 90–150 hrs if an API is granted.
Prime Services	Sidebar item 11	No functional requirements written in the document. Needs definition.
Community module	Sidebar item 10, p.150–151	Only a Practo screenshot is provided; no requirements. Budgeted here at minimum scaffolding only (read-only feed). A full social/Q&A platform would add 180–300 hrs.
Consent Form module	p.125–126	Page contains only “Only for cura tab / Update to premium”. Budgeted as basic template CRUD only.
Sections marked “Not Complete”	p.87–89	Patient Module list/search and Data Privacy sections are flagged incomplete in the source. Estimated on stated content; material additions are billed separately.

Item	Spec ref	Reason / note
BMDC number live verification	1.3.2.1(b)	Assumes format validation only. Real-time verification against a BMDC registry API is not publicly available; manual admin verification is assumed.
NID verification against NID server	3.2.6.4.1	Assumes image upload + manual review. Election Commission NID API integration requires government approval and would add ~72 hrs plus per-query fees.
Telemedicine / video consultation	Pricing Catalog mentions “Consultation by Video Call”	Only the *fee* is in scope. Building the video calling feature would add ~150–210 hrs.
Data migration from an existing system	—	Not mentioned. Scope on request.
Hardware, printers, on-site clinic setup, staff training	—	—

Estimates are based on the functional scope described in Cura draft 5.pdf and cover development only. Sections of the source document that are incomplete or contain only screenshots have been estimated on the basis of comparable modules; clarification of those areas may shift the totals.
